

2.5-inch U.2, 7mm, NVMe SSD
800GB, 1.6TB, 3.2TB, 6.4TB,
960GB, 1.92TB, 3.84TB, 7.68TB¹

Features

- Western Digital NVMe 1.3 compliant controller; PCIe Gen3.1x4
- Western Digital BiCS4 96L 3D TLC NAND
- 0.8 and 2.0 DWPD
- Data-loss protection
- MTBF rating of 2 million hours
- Instant Secure Erase (ISE)
- 5-year limited warranty

Benefits

- Optimized for all common read-intensive and mixed used workloads
- Up to 195K IOPS (70/30 random mixed workload)
- 5x read performance improvement over SATA SSDs and 65% less power consumption compared to 25W performance NVMe SSDs
- Vertically integrated with proven controller architecture accelerates qualification

Specialized for the Following Applications

- Boot, cache or storage
- Software Defined Storage
- File, Block and Object Storage applications
- Hyper-converged Infrastructure
- Virtualization

Ultrastar® DC SN640 NVMe™ for Data Centers

NVMe™ SSDs are specifically designed to maximize flash memory performance. They offer ultra-low latency, high scalability and lower TCO over traditional SATA-based SSDs. NVMe SSDs are widely deployed in the public cloud segment to better manage peak demands and demanding workloads such as AI/ML, OLTP, virtualization, CDN and others. Traditional SATA-based SSDs have become a bottleneck for on-premises data centers utilizing higher performance CPUs in converged, hyper-converged and composable infrastructure designs. With NVMe SSDs, IT organizations can optimize their data center infrastructure, improve storage capacity utilization for demanding workloads, enhance responsiveness for critical applications, maintain uptimes and availability, and lower their TCO.

Western Digital's Ultrastar® DC SN640 NVMe SSD offers improved performance and responsiveness over prior generations, with capacities from 960GB-7.68TB at 0.8 DW/D and 800GB-6.4TB at 2 DW/D in a U.2 form factor. The DC SN640 includes Western Digital's 96-Layer BiCS4 3D TLC NAND and Western Digital's NVMe 1.3 controller, providing up to 5x read performance improvement over SATA SSDs. The DC SN640 incorporates enterprise reliability features such as power-loss protection, end-to-end data path protection, and a five-year limited warranty.

Designed for Workload Flexibility

The DC SN640 comes in two endurance classes: 0.80 DW/D and 2 DW/D, each for five years. The 0.80 DW/D endurance class is designed for read-intensive applications while the 2 DW/D endurance class can be deployed in mixed-use workloads that require higher endurance levels over the life of the drive or higher performance for write-intensive applications.

Safeguarding Data

The Ultrastar DC SN640 with Instant Secure Erase (ISE) helps safeguard data and provides instant erase upon decommissioning and recommissioning the drive. Secured Firmware downloads with RSA authentication ensure that the drive runs authentic Western Digital firmware only.

Better with NVMe

Now is the right time to upgrade from SATA SSDs to NVMe performance in cloud/hyperscale and on-prem data centers. The Ultrastar DC SN640 NVMe SSD will help enable lower TCO compared to SATA SSDs, while providing low-latency and performance for current demanding workloads and future requirements.

¹ One gigabyte (GB) is equal to 1,000MB (one billion bytes) due to operating environment.

² Endurance rating based on DW/D using 4KiB random write workload over 5 years.

³ Based on internal testing. Performance will vary by capacity point, or with the changes in useable capacity. Consult product manual for further details. All performance measurements are in full sustained mode and are peak values. Subject to change.

⁴ Average read latency at 4KiB, QD=1.

⁵ MTBF and AFR specifications are based on a sample population and are estimated by statistical measurements and acceleration algorithms under typical operating conditions for this drive model. MTBF and AFR ratings do not predict an individual drive's reliability and do not constitute a warranty.

⁶ The warranty for the product will expire on the earlier of (i) the date when the flash media has reached one-percent (1%) of its remaining life or (ii) the expiration of the time period associated with the product.

⁷ Composite temperature reading.

⁸ Values are based on ambient temperature. Avoid non-operational exposure to temperatures in excess of 40°C for periods exceeding three months.
