Villa Door Station

User's Manual

Foreword

General

This manual introduces how to configure the villa door station (hereinafter referred to as "VTO") on the webpage.

Safety Instructions

The following categorized signal words with defined meaning might appear in the Manual.

Signal Words	Meaning
DANGER	Indicates a high potential hazard which, if not avoided, will result in death or serious injury.
warning warning	Indicates a medium or low potential hazard which, if not avoided, could result in slight or moderate injury.
! CAUTION	Indicates a potential risk which, if not avoided, could result in property damage, data loss, reductions in performance, or unpredictable results.
©—\(\tau\) TIPS	Provides methods to help you solve a problem or save time.
NOTE	Provides additional information as a supplement to the text.

Revision History

Version	Revision Content	Release Date
V1.0.1	Revised "Important Safeguards and Warnings".	December 2022
V1.0.0	First release.	January 2021

Privacy Protection Notice

As the device user or data controller, you might collect the personal data of others such as their face, fingerprints, and license plate number. You need to be in compliance with your local privacy protection laws and regulations to protect the legitimate rights and interests of other people by implementing measures which include but are not limited: Providing clear and visible identification to inform people of the existence of the surveillance area and provide required contact information.

About the Manual

- The manual is for reference only. If there is inconsistency between the manual and the actual product, the actual product shall prevail.
- We are not liable for any loss caused by the operations that do not comply with the manual.
- The manual would be updated according to the latest laws and regulations of related jurisdictions. For detailed information, refer to the paper manual, CD-ROM, QR code or our

- official website. If there is inconsistency between paper manual and the electronic version, the electronic version shall prevail.
- All the designs and software are subject to change without prior written notice. The product updates might cause some differences between the actual product and the manual. Please contact the customer service for the latest program and supplementary documentation.
- There still might be deviation in technical data, functions and operations description, or errors in print. If there is any doubt or dispute, we reserve the right of final explanation.
- Upgrade the reader software or try other mainstream reader software if the manual (in PDF format) cannot be opened.
- All trademarks, registered trademarks and the company names in the manual are the properties
 of their respective owners.
- Please visit our website, contact the supplier or customer service if there is any problem occurring when using the device.
- If there is any uncertainty or controversy, we reserve the right of final explanation.

Important Safeguards and Warnings

This section introduces content covering the proper handling of the device, hazard prevention, and prevention of property damage. Read carefully before using the device, and comply with the guidelines when using it.

Operation Requirements

- Check whether the power supply is correct before use.
- Do not unplug the power cord on the side of the device while the adapter is powered on.
- Operate the device within the rated range of power input and output.
- Transport, use and store the device under allowed humidity and temperature conditions.
- If the device is powered off for longer than a month, it should be placed in its original package and sealed. Make sure to keep it away from moisture, and store it under allowed humidity and temperature conditions.
- Do not drop or splash liquid onto the device, and make sure that there is no object filled with liquid on the device to prevent liquid from flowing into it.
- Do not disassemble the device without professional instruction.

Installation Requirements

WARNING

- Do not connect the power adapter to the device while the adapter is powered on.
- Strictly comply with the local electric safety code and standards. Make sure the ambient voltage is stable and meets the power supply requirements of the device.
- Do not connect the device to two or more kinds of power supplies, to avoid damage to the device.
- Improper use of the battery might result in a fire or explosion.

- Personnel working at heights must take all necessary measures to ensure personal safety including wearing a helmet and safety belts.
- Do not place the device in a place exposed to sunlight or near heat sources.
- Keep the device away from dampness, dust, and soot.
- Install the device on a stable surface to prevent it from falling.
- Install the device in a well-ventilated place, and do not block its ventilation.
- Use an adapter or cabinet power supply provided by the manufacturer.
- Use the power cords that are recommended for the region and conform to the rated power specifications.
- The power supply must conform to the requirements of ES1 in IEC 62368-1 standard and be no higher than PS2. Please note that the power supply requirements are subject to the device label.
- The device is a class I electrical appliance. Make sure that the power supply of the device is connected to a power socket with protective earthing.

1 Initializing the VTO

For first-time login or after resetting the VTO, you need to initialize it on the webpage.

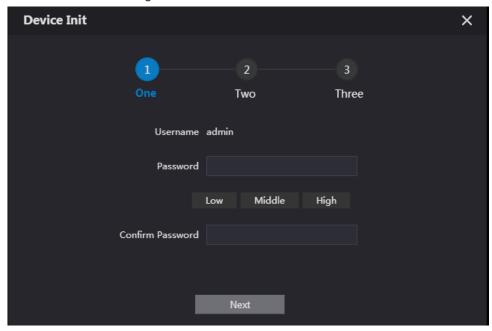

Step 1 Power on the VTO.

Step 2 Go to the default IP address (192.168.1.108) of the VTO.

Make sure that the IP address of your PC is in the same network segment as the VTO.

Figure 1-1 Device initialization

- <u>Step 3</u> Enter and confirm the password, and then click **Next**.
- Step 4 Enter an email address for resetting password.
- Step 5 Click **Next**, and then click **OK**.

2 Login and Resetting Password

2.1 Login

Before login, make sure that the PC is in the same network segment as the VTO.

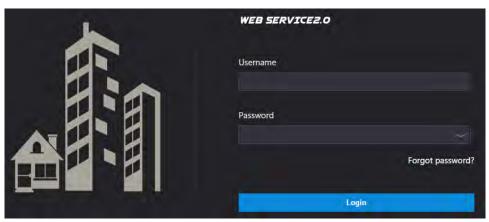

Step 1 Go to the IP address of the VTO in the browser.

For first-time login, enter the default IP (192.168.1.108). If you have multiple VTOs, we recommend changing the default IP address (**Network > Basic**) to avoid conflict.

<u>Step 2</u> Enter "admin" as username and the password you set during initialization, and then click **Login**.

2.2 Resetting Password

<u>Step 1</u> On the login page, click **Forgot Password?**, and then click **Next**.

Figure 2-2 Reset the password

- Step 2 Scan the QR code, and then you will get a string of numbers and letters.
- <u>Step 3</u> Send the string to the email: support_gpwd@htmicrochip.com, and then the security code will be sent to the email address configured during initialization.
- <u>Step 4</u> Enter the security code in the input box, and then click **Next**.

- If you did not set an email address during initialization, contact your supplier or customer service for help.
- The security code will be valid only for 24 hours upon receipt.
- If you enter the wrong security code for 5 consecutive times, your account will be locked for 5 minutes.

Step 5 Enter and confirm the new password, and then click **OK**.

3 Main Interface

Figure 3-1 Main interface

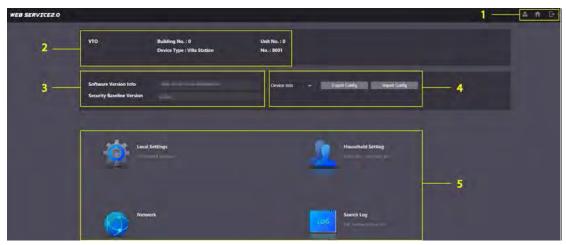

Table 3-1 Main interface introduction

No.	Function	Description	
1	General function	 Change the password and your email address. Go to the main interface. Log out, restart the VTO or restore the VTO to factory settings. If you restore the VTO to factory settings, all data except external storage will be deleted. You can format the SD card to delete the data in it.	
2	VTO information	View the information of the VTO and the system.	
3	System information		
4	Configuration manager	Export or import VTO configuration or user information.	
5	Function	Configure parameters for different functions. Interface and function might vary with models. The actual product shall prevail.	

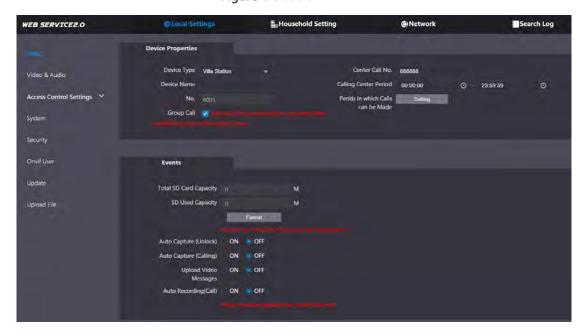

4 Local Settings

This chapter introduces the detailed configuration of the VTO.

4.1 Basic

<u>Step 1</u> Select **Local Settings > Basic**.

Figure 4-1 Basic

Step 2 Configure the parameters.

Table 4-1 Basic parameter description

Parameter	Description
Device Type	Select Villa Station or Small Apartment as needed.
Center Call No.	The default phone number for the management center is 888888, and
Center Can No.	you can set it to any number with up to 9 digits.
Device Name	When other devices are monitoring this VTO, the device name will appear
Device Name	on the monitoring image.
Calling Center Period	Time period in which the management center can be called.
	Used to differentiate each VTO, and we recommend setting it according
	to unit or building number, and then you can add VTOs to the SIP server
N.	by using their numbers.
No.	
	You can change the number of the VTO when it is not working as the SIP
	server.
Periods in which Calls	Configure the time if you only want to receive calls during a specific
can be Made	period.
Croup Call	Enable it on the VTO that works as the SIP server, and when a main VTH
Group Call	receives a call, all extension VTHs will also receive the call.

Parameter	Description
Total SD Card	
Capacity	Displays the total and used capacity of the SD card. You can click Format
SD Used Capacity	to delete all the data in the SD card.
Format	
Auto Capture	When the door is unlocked, the VTO will take two snapshots and save
(Unlock)	them to the SD card.
Auto Capturo (Calling)	Take a snapshot and save it in the SD card of the VTO when the VTO is
Auto Capture (Calling)	calling.
	When enabled:
	• If an SD card is inserted in both the VTH and VTO, the video message
Unload Vidoo	will be saved both in the SD cards of the VTH and the VTO.
Upload Video Messages	• If an SD card is only inserted in the VTH or the VTO, the video
	message will be saved only in the SD card of the VTH or the VTO.
	• If no SD card is inserted in the VTH or VTO, no video message will be
	saved.
Auto Pocarding (Call)	Take recording when the VTO is in a call, and save the recording in the SD
Auto Recording (Call)	card of the VTO.

Step 3 Click Save.

4.2 Video & Audio

Configure the video format and quality, and audio of the VTO.

Step 1 Select Local Settings > Video & Audio.

Figure 4-2 Video and audio

<u>Step 2</u> Configure the parameters, which will take effect upon change.

Table 4-2 Video parameter description

Table 4-2 Video parameter description			
Parameter		Description	
		Select different resolution as needed:	
		• 1080P : 1920 × 1080.	
	Video	• 720P : 1280 × 720.	
	Format	● WVGA : 800 × 480.	
Main/Sub	Tomat	● QVGA : 320 × 240.	
Stream		• D1 : 720 × 480.	
Sueam		• CIF : 352 × 288.	
	Frame Rate	The larger the value, the smoother the video, but it requires more	
	Traine Nate	bandwidth.	
	Pitrata Pata	The larger the value, the better the video quality, but it requires more	
	Bitrate Rate	bandwidth.	
	Casa Mada	Select as needed according to the lighting condition. Auto is selected	
	Scene Mode	by default.	
		BLC: Back light compensation. Improve the clarity of the target in	
		the image.	
	Compensati	• WDR : Wide dynamic range. Enhance the brightness of dark areas,	
_	on Mode	and reduce the brightness of bright areas to improve the image.	
Status		• HLC : High light compensation. Reduce the brightness of the	
		strong spots to improve the overall image.	
		Select PAL or NTSC according to your area.	
	Video		
	Standard	PAL is mostly used in China and Europe, and NTSC primarily in the	
		United States and Japan.	
	Brightness	The larger the value, the brighter the image.	
	Contrast	Larger value for more contrast between bright and dark areas.	
	Correrase	Make the color brighter or darker. The default value is made by the	
	Hue	light sensor, and we recommend keeping it default.	
	Saturation	The larger the value, the thicker the color.	
Imago	Saturation	Changes the picture brightness and improves the picture dynamic	
Image	Gamma		
	Cain	range in a non-linear way. The larger the value, the brighter the image.	
	Gain	Amplify the video signal to increase image brightness. If the value is	
	Adjustment	too large, there will be more noise in the image.	
	Mirror	Display the image with left and right side reversed.	
	Flip	Display the image upside down.	
A 1:	Display Time	Display the current time and date on the video image.	
Audio	_	Turn on or off each type of sound.	
Control			
	Microphone		
Volume	Volume	Adjust the volume as needed.	
Control	Speaker	,	
	Volume		

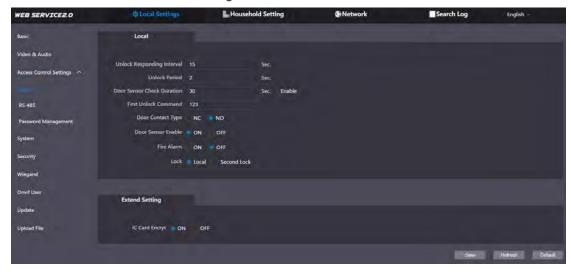

4.3 Access Control Settings

This section introduces how to configure the two locks connected to the lock port or the RS-485 port of the VTO.

4.3.1 Local

Step 1 Select Local Settings > Access Control Settings.

Figure 4-3 Local

Step 2 Configure the parameters.

Table 4-3 Local access control parameter description

Parameter	Description	
Unlock		
Responding	The door can only be unlocked again after the interval.	
Interval		
Unlock Period	The time during which the lock stays unlocked.	
	Enable it, and the door will not be locked until the door sensors contact	
	each other. If the door is unlocked longer than the Door Sensor Check	
Door Sensor	Duration , the door sensor alarm will be triggered, and the alarm will be	
200.00	sent to the management center.	
Check Duration	Disable it, and then the door will be locked after the Unlock Period .	
	You need to install a door contact to configure this parameter.	
First/Second	You can connect a third-party phone, such as a SIP phone, to the VTO, and	
Unlock Command	use the command to open the door remotely.	
Door Contact	NC: Normally closed.	
Туре	NO: Normally open.	
Door Sensor	Consideration de la constant de la c	
Enable	Synchronize door sensor status to indoor monitors (VTHs).	
Fire Alarm	If turned on, you can connect an alarm device to the port that is originally for	
	the door contact, but you cannot use the door contact function.	
Lock	Non-remote methods, such as password or card, will unlock the lock you	

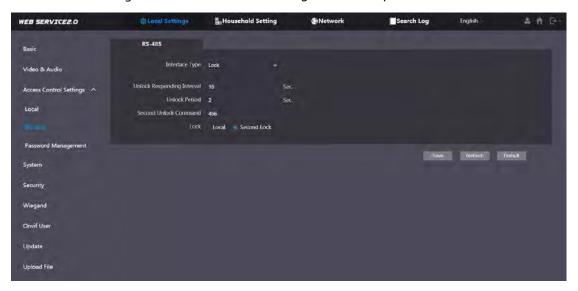

Parameter	Description
	select.
IC Card Encrypt	Access cards issued by the VTO will be encrypted and unclonable.

Step 3 Click Save.

4.3.2 RS-485

Select **Local Settings** > **Access Control Settings**, and then configure the parameters of the lock connected through the RS-485 port. See Table 4-3 for parameter description.

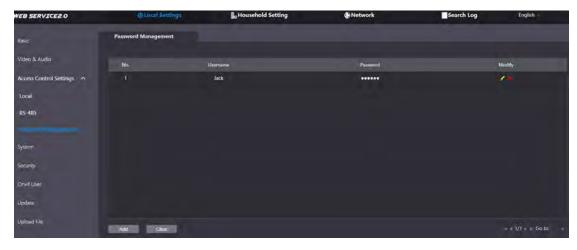

Figure 4-4 Lock connected through the RS-485 port

4.3.3 Password Management

Add a username and password used to unlock the door.

Figure 4-5 Password management

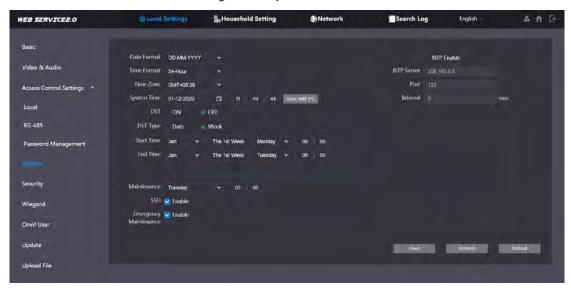

4.4 System

Configure time parameters, NTP server, and more.

Figure 4-6 System

Step 2 Configure the parameters.

Table 4-4 System parameter description

Parameter	Description	
Date Format	Select a format as needed.	
Time Format	– Select a format as needed.	
System Time	Changing system time might cause problems on video searching and information publication. Turn off video recording and auto snapshot before changing it.	
Time Zone	Configure the time zone as needed.	
Sync with PC	Synchronize the VTO system time with your PC.	
DST	Daylight saving time. If it is applicable to your area, you need to enable it, and then configure DST type, start time and end time.	
DST Type	Select Date or Week as needed, and then configure the specific period.	
Start Time	Configure the start time and end time of DST.	
End Time		
NTP Enable	Enable NTP and enter the IP address of the NTP server, and then the VTO will	
NTP Server	syncronize time with the NTP server automatically.	
Port	NTP server port number.	
Interval	VTO time update cycle. 30 minutes at most.	
Maintenance	Define the time when the VTO will restrart automatically.	
SSH	You can connect debugging devices to the VTO through SSH protocol. We recommend turning it off, and turn on security mode and outbound service information protection. See "4.5 Security". Otherwise, the VTO might be exposed to security risks and data leakage.	
Emergency Maintenance	Enable it for fault analysis and repair.	

Parameter	Description
	This function will occupy 8088 and 8087 ports.

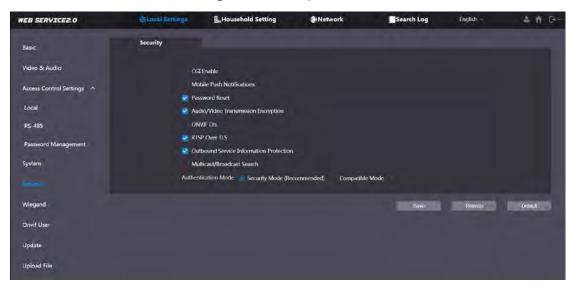

Step 3 Click Save.

4.5 Security

Configure functions that involve device security.

Step 1 Select Local Settings > Security.

Figure 4-7 Security

Step 2 Configure the parameters.

Table 4-5 Security parameter description

Parameter	Description
	Enable the use of CGI command.
CGI Enable	\triangle
	We recommend turning it off. Otherwise, the VTO might be exposed to
	security risks and data leakage.
	Send information to the app on the smartphone.
Mobile Push Notification	\triangle
Notification	We recommend turning it off if you do not need this function. Otherwise,
	the VTO might be exposed to security risks and data leakage.
Password Reset	If turned off, you will not be able to reset password.
	Encrypt all data during voice or video call.
Audio/Video	\wedge
Transmission	$\langle i \rangle$
Encryption	We recommend turning it on. Otherwise, the VTO might be exposed to
	security risks and data leakage.
ONVIF On	Allow third-party to pull video stream of the VTO through the ONVIF
OIVVII OII	protocol.

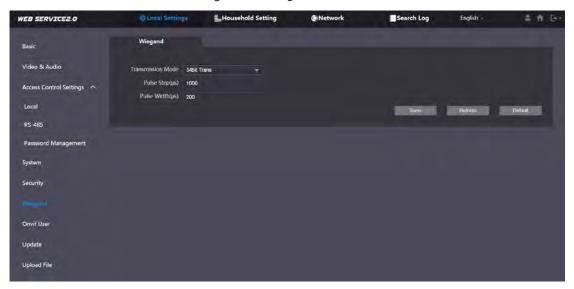

Parameter	Description
	\triangle
	We recommend turning it off. Otherwise, the VTO might be exposed to
	security risks and data leakage.
	Output encrypted bit stream through RTSP.
RTSP Over TSL	\triangle
	We recommend turning it on. Otherwise, the VTO might be exposed to
	security risks and data leakage.
	Protect your passwords.
Outbound Service Information	\triangle
Protection	We recommend turning it on. Otherwise, the VTO might be exposed to
	security risks and data leakage.
	Enable it and the VTO will be found by other devices.
Multicast/Broadcast	\triangle
Search	We recommend turning it off. Otherwise, the VTO might be exposed to
	security risks and data leakage.
	• Security Mode (recommended): Support logging in with Digest authentication.
	Compatible Mode: Use the old login method.
Authentication Mode	\triangle
	We recommend the security mode. Compatible mode might expose the
	VTO to security risks and data leakage.
<u></u>	

Step 3 Click Save.

4.6 Wiegand

Configure the parameters as needed when connected to other devices, such as a card reader with a Wiegand port.

Figure 4-8 Wiegand

4.7 Onvif User

Add accounts for devices to monitor the VTO through the ONVIF protocol.

If you delete an account, it cannot be undone.

Step 1 Select Local Settings > Onvif User.

Step 2 Click Add.

Figure 4-9 Add an ONVIF user

<u>Step 3</u> Enter the information, and then click **Save**.

ONVIF devices can now monitor the VTO by using the account. See the user's manual of the ONVIF device for details.

4.8 Upload File

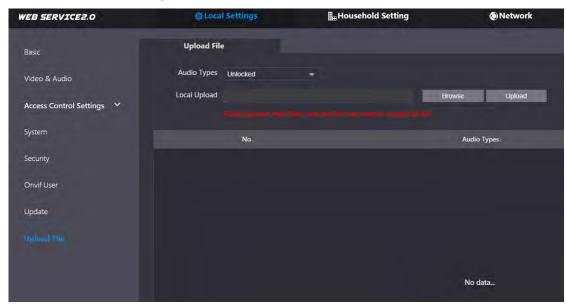

Upload audio file to change the sound when calling, unlocking the door, and more.

Step 1 Select Local Settings > Upload File.

<u>Step 2</u> Select an audio type, and then click **Browse** to select the audio file as needed.

Figure 4-10 Change the sound prompt

Step 3 Click **Upload**.

5 Household Setting

This chapter introduces how to add, modify, and delete VTO, VTH, VTS, and IPC, and how to send messages from the SIP server to VTOs and VTHs when the VTO works as the SIP server. If you are using other servers as the SIP server, see the corresponding manual for details.

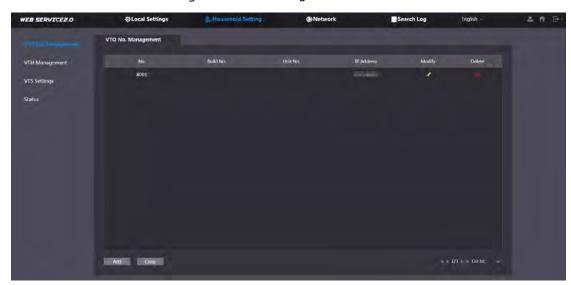

To configure SIP server parameters, see "6.3 SIP Server" for details.

5.1 VTO No. Management

You can add VTOs to the SIP server, and all the VTOs connected to the same SIP server can call each other.

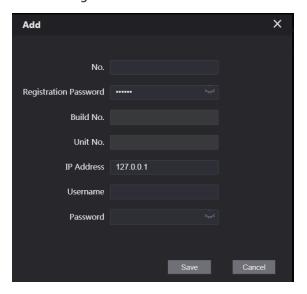

Step 1 Log in to the webpage of the VTO working as the SIP server, and then select **Household**Setting > VTO No. Management.

Step 2 Click Add.

Figure 5-2 Add VTO

The SIP server must be added.

Table 5-1 Add VTO configuration

Parameter	Description
No.	The VTO number you configured. See Table 4-1 for details.
Registeration	Keep it default.
Password	
Build No.	- Available only when other servers work as the SIP server.
Unit No.	
IP Address	IP address of the VTO.
Username	The username and password of the VTO.
Password	

Step 4 Click Save.

Click or to modify or delete a VTO, or **Clear** to delete all added VTOs, but the one

that you have logged in to cannot be modified or deleted.

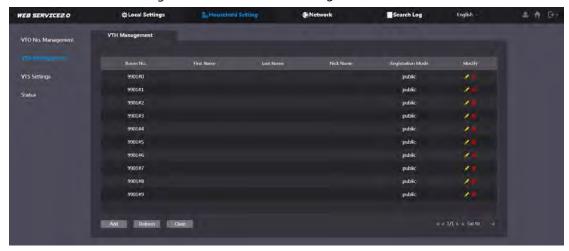

5.2 VTH Management

5.2.1 Adding Room Number

You can add room numbers to the SIP server, and then configure the room number on the VTHs to connect them to the network.

<u>Step 1</u> Log in to the webpage of the SIP server, and then select **Household Setting > VTH Management**.

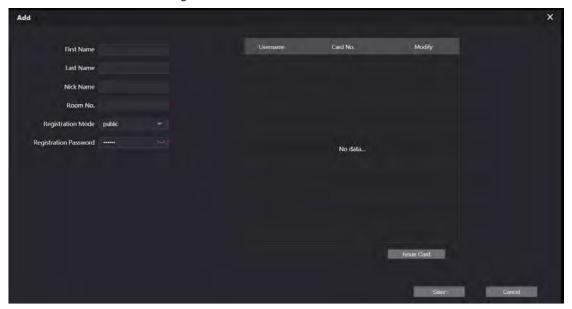

Figure 5-3 Room number management

Step 2 Click Add.

Figure 5-4 Add a room number

Step 3 Configure the parameters.

Table 5-2 Room information

Parameter	Description
First Name	Enter the information you need to differentiate each room.
Last Name	
Nick Name	
Room No.	Enter a room number, and then configure the number on a VTH to connect
	to connect it to the network.
Registeration Type	Select public .
Registeration	Keep it default.
Password	

Step 4 Click Save.

Click or to modify or delete a room number.

5.2.2 Issuing Access Card

Issue an access card to unlock the door of a room.

To use this function, the VTO must have a card reader.

<u>Step 1</u> Select **Household Setting > VTH Management**, click **Add**, and then click **Issue Card**.

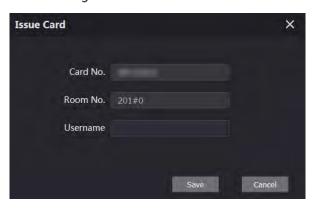

Figure 5-5 Countdown notice

Step 2 Swipe the card on the VTO.

Figure 5-6 Issue card

<u>Step 3</u> Enter the username, click **Save**, and then click **Confirm Send Card**.

Figure 5-7 Issued access card

Other Operations

- Click to set it as the main card, and then the icon changes to The main card can be used to issue access cards for this room on the VTO.
- Click to set it to loss, and then the icon changes to . The lost card cannot be used to open the door.
- Click or to modify the username or delete the card.

5.2.3 Issuing Fingerprint

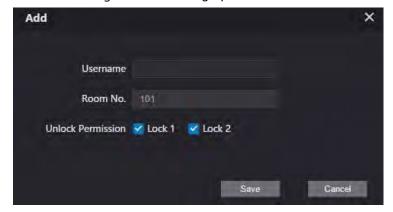

Issue fingerprints to unlock the door of a room.

To use this function, the VTO must have a fingerprint scanner.

<u>Step 1</u> Select **Household Setting > VTH Management**, click **Add**, and then click **Issue Fingerprint**.

Figure 5-8 Issue fingerprint

<u>Step 2</u> Enter a username, assign unlock permission as needed, and then click **Save**.

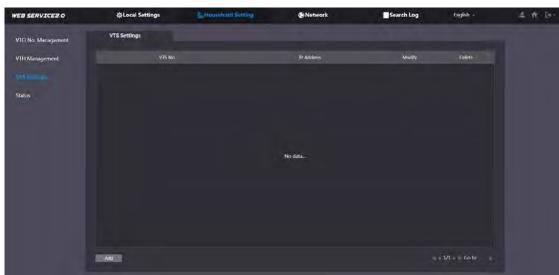

5.3 VTS Management

You can add a VTS to the SIP server, and then it can be used as the management center. It can also manage, call, or receive calls from all the VTOs and VTHs in the network. See the corresponding user's manual for details.

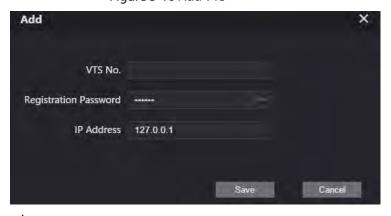

<u>Step 1</u> Log in to the webpage of the VTO working as the SIP server, and then select **Household Setting > VTS Settings**.

Step 2 Click Add.

Figure 5-10 Add VTS

Step 3 Configure the parameters.

Table 5-3 Add VTS configuration

Parameter	Description
VTS No.	The number of the VTS.
Registeration Password	Keep it default.
IP Address	VTS IP address.

Step 4 Click Save.

5.4 IPC Setting

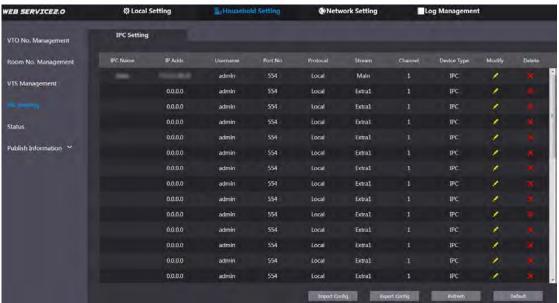

You can add IPC and NVR to the VTO working as the SIP server, and then all the connected VTHs can monitor them.

Interfaces might vary with different products. The actual interface shall prevail.

<u>Step 1</u> Log in to the webpage of the VTO working as the SIP server, and then select **Household Setting** > **IPC Setting**.

Figure 5-11 IPC setting

Step 2 Click .

Figure 5-12 Add IPC

Step 3 Configure the parameters.

Table 5-4 Add IPC configuration

Parameter	Description
IPC Name	Enter the name that identifies the IPC.
IP Address	IP address of the IPC.
Username	The username and password of the device.
Password	
Port	Keep it default.
Protocol	Select Local or Onvif .
Stream Type	Main: Better video quality but requires more bandwidth.
	• Extra1: Smoother video with poorer quality, but requires less bandwidth.
Channel	The number of the channels that a device supports.
Device Type	Select the one as needed.
MediaEncrypt	Select ON if the IPC to be added is encrypted.

Step 4 Click Save.

Other Operations

- **Export Config**: Export the device information to your PC.
- **Import Config**: Import device information.

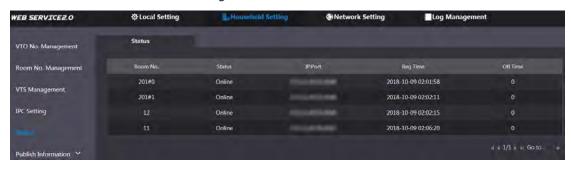

5.5 Status

You can view the online status and IP addresses of all the connected devices.

Log in to the webpage of the SIP server, and then select **Household Setting > Status**.

Figure 5-13 Status

5.6 Publish Information

You can send messages from the SIP server to VTH devices, and view message history.

5.6.1 Send Info

<u>Step 1</u> Log in to the webpage of the SIP server, and then select **Household Setting > Publish Information > Send Info**.

Figure 5-14 Send information

- <u>Step 2</u> Specify the **Validity Period** that the message will be valid.
- <u>Step 3</u> Enter the VTO number or VTH number, or select **All devices** to send the message to all the devices in the network, and then enter the title and content of your message.
- Step 4 Click Confirm.

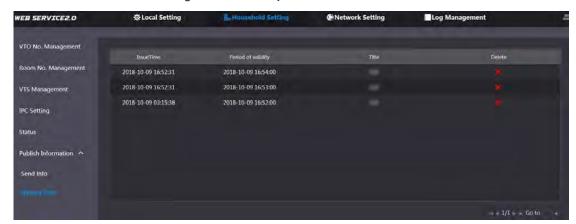

5.6.2 History Info

You can view the information of sent messages.

Log in to the webpage of the SIP server, select **Household Setting > Publish Information > History Info**.

Figure 5-15 History information

6 Network

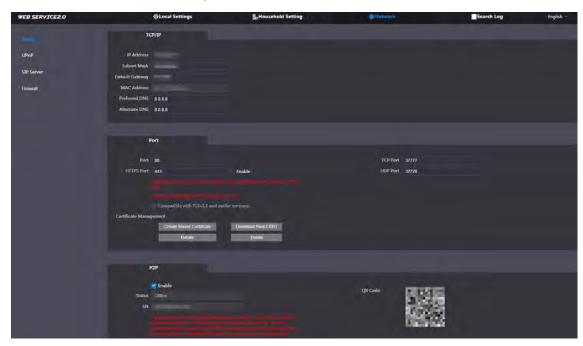

This chapter introduces how to configure the network parameters.

6.1 Basic

6.1.1 TCP/IP

You can modify the IP address, subnet mask, default gateway, and DNS of the VTO. Step 1 Select **Network > Basic**.

Figure 6-1 TCP/IP and port

Step 2 Configure the parameters, and then click **Save**.

The VTO will restart, and you need to modify the IP address of your PC to the same network segment as the VTO to log in again.

6.1.2 Port

Table 6-1 Parameter description

Parameter	Description
Port	80 by default. If already used, choose any number from 1025 to 65535 as needed. You can enter http://VTO IP address:Port to log in to the VTO.
HTTPS Port	Enable it and click Save . You can now enter https://VTO IP address:HTTPS Port to log in to the VTO.
TCP/UDP Port	Used for accessing the VTO with devices in other networks. See "6.2 UPnP" for details.

Parameter	Description
Create Server Certificate	The unique digital identification of VTO for the SSL protocol. For first time use or after changing the IP address of the VTO, you need to go through this process.
	If you delete the certificate that has been created, it cannot be undone. If you are using a PC that has never logged in to the VTO, you need to download the root certificate, double-click to install it, and then you can use
Download Root CERT	the HTTPS function mentioned above.
	If you delete the certificate that has been installed, it cannot be undone.

6.1.3 P2P

Enable the **P2P** function, and then you can scan the QR code with your phone to add the VTO to the app on your smartphone. See the quick start guide for details.

6.2 UPnP

When the VTO works as the SIP server, you can configure the UPnP function to allow WAN devices to log in to the VTO.

Preparation

- Enable the UPnP function on the router, and then configure a WAN IP address for the router.
- Connect the VTO to the LAN port of the router.

6.2.1 Enabling UPnP Services

Step 1 Select **Network > UPnP**.

Step 2 Enable the services listed as needed.

Step 3 Select **Enable**.

Step 4 Click Save.

6.2.2 Adding UPnP Services

Step 1 Select **Network > UPnP**.

Step 2 Click Add.

Step 3 Configure the parameters as needed.

Figure 6-2 Add a UPnP service

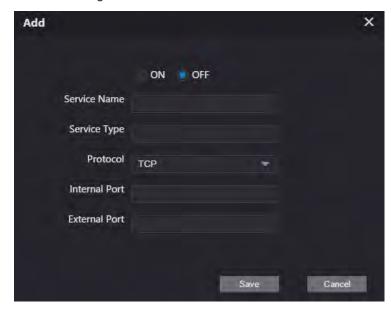

Table 6-2 Parameter description

Parameter	Description
Service Name	Enter the information as needed.
Service Type	
Protocol	Select TCP or UDP as needed.
Internal Port	Use port number from 1024 through 5000.
External Port	
	 Do not use port number 1–1023 to avoid conflict.
	• If you need to configure this function for multiple devices, make sure
	that the ports are not the same.
	 The port number you use must not be occupied.
	 The internal and external port number must be the same.

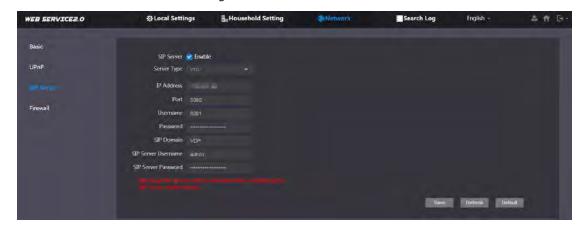

6.3 SIP Server

There must be a SIP server in the network for all connected VTOs and VTHs to call each other. You can use a VTO or other servers as the SIP server.

Step 1 Select **Network > SIP Server**.

Figure 6-3 SIP Server

Step 2 Select a server type as needed.

• The VTO you have logged in as the SIP server:

Enable **SIP Server**, and click **Save**, and then the VTO will restart. You can add VTOs and VTHs to this VTO. See the details in "5 Household Setting".

If the VTO you have logged in does not SIP server, do not enable **SIP Server**; otherwise the connection will fail.

If another VTO works as the SIP server:

Do not enable **SIP server**. Set **Server Type** to **VTO**, configure the parameters, and then click **Save**.

Table 6-3 SIP server configuration

Parameter	Description
IP Addr.	VTO IP address.
Port	5060 by default when VTO work as SIP server.
POIL	5080 by default when the platform works as SIP server.
Username	Keep it default.
Password	
SIP Domain	VDP.
SIP Server Username	The username and password of the VTO.
SIP Server Password	

• If other servers work as the SIP server:

Select the **Server Type** as needed, and then see the corresponding manual for details.

6.4 Firewall

You can enable different firewall types to control network access to the VTO.

Step 1 Select **Network > Firewall**.

Figure 6-4 Firewall

- <u>Step 2</u> Select one or more firewall types, and then enable them.
- Step 3 Configure the parameters.

Table 6-4 Firewall type description

Туре	Description
Network Access	Select either Allowlist or Blocklist , and then add an IP address or segment
	which is allowed or denied to access the VTO.
PING Prohibited	The VTO will not response to ping to avoid ping attacks.
Anti-semijoin	Protects the VTO performance by blocking excessive SYN packets.

7 Log Management

Select **Search Log**. You can search for different logs, and export them to your PC as needed.

If storage is full, the oldest records will be overwritten. Back up the records as needed.

Appendix 1 Cybersecurity Recommendations

Cybersecurity is more than just a buzzword: it's something that pertains to every device that is connected to the internet. IP video surveillance is not immune to cyber risks, but taking basic steps toward protecting and strengthening networks and networked appliances will make them less susceptible to attacks. Below are some tips and recommendations on how to create a more secured security system.

Mandatory actions to be taken for basic device network security:

1. Use Strong Passwords

Please refer to the following suggestions to set passwords:

- The length should not be less than 8 characters;
- Include at least two types of characters; character types include upper and lower case letters, numbers and symbols;
- Do not contain the account name or the account name in reverse order;
- Do not use continuous characters, such as 123, abc, etc.;
- Do not use overlapped characters, such as 111, aaa, etc.;

2. Update Firmware and Client Software in Time

- According to the standard procedure in Tech-industry, we recommend to keep your device (such as NVR, DVR, IP camera, etc.) firmware up-to-date to ensure the system is equipped with the latest security patches and fixes. When the device is connected to the public network, we recommend enabling the "auto-check for updates" function to obtain timely information of firmware updates released by the manufacturer.
- We suggest that you download and use the latest version of client software.

"Nice to have" recommendations to improve your device network security:

1. Physical Protection

We suggest that you perform physical protection to device, especially storage devices. For example, place the device in a special computer room and cabinet, and implement well-done access control permission and key management to prevent unauthorized personnel from carrying out physical contacts such as damaging hardware, unauthorized connection of removable device (such as USB flash disk, serial port), etc.

2. Change Passwords Regularly

We suggest that you change passwords regularly to reduce the risk of being guessed or cracked.

3. Set and Update Passwords Reset Information Timely

The device supports password reset function. Please set up related information for password reset in time, including the end user's mailbox and password protection questions. If the information changes, please modify it in time. When setting password protection questions, it is suggested not to use those that can be easily guessed.

4. Enable Account Lock

The account lock feature is enabled by default, and we recommend you to keep it on to guarantee the account security. If an attacker attempts to log in with the wrong password several times, the corresponding account and the source IP address will be locked.

5. Change Default HTTP and Other Service Ports

We suggest you to change default HTTP and other service ports into any set of numbers between 1024~65535, reducing the risk of outsiders being able to guess which ports you are using.

6. Enable HTTPS

We suggest you to enable HTTPS, so that you visit Web service through a secure communication channel.

7. MAC Address Binding

We recommend you to bind the IP and MAC address of the gateway to the device, thus reducing the risk of ARP spoofing.

8. Assign Accounts and Privileges Reasonably

According to business and management requirements, reasonably add users and assign a minimum set of permissions to them.

9. Disable Unnecessary Services and Choose Secure Modes

If not needed, we recommend turning off some services such as SNMP, SMTP, UPnP, etc., to reduce risks.

If necessary, it is highly recommended that you use safe modes, including but not limited to the following services:

- SNMP: Choose SNMP v3, and set up strong encryption passwords and authentication passwords.
- SMTP: Choose TLS to access mailbox server.
- FTP: Choose SFTP, and set up strong passwords.
- AP hotspot: Choose WPA2-PSK encryption mode, and set up strong passwords.

10. Audio and Video Encrypted Transmission

If your audio and video data contents are very important or sensitive, we recommend that you use encrypted transmission function, to reduce the risk of audio and video data being stolen during transmission.

Reminder: encrypted transmission will cause some loss in transmission efficiency.

11. Secure Auditing

- Check online users: we suggest that you check online users regularly to see if the device is logged in without authorization.
- Check device log: By viewing the logs, you can know the IP addresses that were used to log in to your devices and their key operations.

12. Network Log

Due to the limited storage capacity of the device, the stored log is limited. If you need to save the log for a long time, it is recommended that you enable the network log function to ensure that the critical logs are synchronized to the network log server for tracing.

13. Construct a Safe Network Environment

In order to better ensure the safety of device and reduce potential cyber risks, we recommend:

- Disable the port mapping function of the router to avoid direct access to the intranet devices from external network.
- The network should be partitioned and isolated according to the actual network needs. If there are no communication requirements between two sub networks, it is suggested to use VLAN, network GAP and other technologies to partition the network, so as to achieve the network isolation effect.
- Establish the 802.1x access authentication system to reduce the risk of unauthorized access to private networks.
- Enable IP/MAC address filtering function to limit the range of hosts allowed to access the device.
