User's Manual

ZHEJIANG DAHUA VISION TECHNOLOGY CO., LTD.

V1.2.1

https://tm.by Интернет-магазин

Foreword

General

This user's manual (hereinafter referred to be "the Manual") introduces the functions and operations of the DVR devices (hereinafter referred to as "the Device").

Safety Instructions

The following signal words might appear in the manual.

Signal Words	Meaning
	Indicates a high potential hazard which, if not avoided, will result in death or serious injury.
	Indicates a medium or low potential hazard which, if not avoided, could result in slight or moderate injury.
	Indicates a potential risk which, if not avoided, could result in property damage, data loss, lower performance, or unpredictable result.
© <u></u> TIPS	Provides methods to help you solve a problem or save you time.
	Provides additional information as the emphasis and supplement to the text.

Revision History

Version	Revision Content	Release Time
V1.2.1	 Updated AI mode switch. Added intelligent diagnosis. Updated alarm-in port settings. Updated password resetting. 	December 2021
V1.2.0	Added some models.	October 2021
V1.1.0	Added DH-XVR4232AN-I.	July 2021
V1.0.11	Added DH-XVR5816S-4KL-I2-LP and DH- XVR7816S-4KL-X-LP-V2.	May 2021
V1.0.10	Deleted the video quality analytics function.	April 2021
V1.0.9	Added some models.	February 2021

Version	Revision Content	Release Time
V1.0.8	Added some models. November 2020	
V1.0.7	Added some models.	September 2020
V1.0.6	Added some models. May 2020	
V1.0.5	Updated to 4.0 UI version.	February 2020
V1.0.4	Added disarm function, HDD database function, and SMD preview function. Optimizes Smart Search function, available to filtering human and vehicle.	September 2019
V1.0.0	First release.	October 2018

Privacy Protection Notice

As the device user or data controller, you might collect the personal data of others such as their face, fingerprints, and license plate number. You need to be in compliance with your local privacy protection laws and regulations to protect the legitimate rights and interests of other people by implementing measures which include but are not limited: Providing clear and visible identification to inform people of the existence of the surveillance area and provide required contact information.

About the Manual

- The manual is for reference only. Slight differences might be found between the manual and the product.
- We are not liable for losses incurred due to operating the product in ways that are not in compliance with the manual.
- The manual will be updated according to the latest laws and regulations of related jurisdictions. For detailed information, see the paper user's manual, use our CD-ROM, scan the QR code or visit our official website. The manual is for reference only. Slight differences might be found between the electronic version and the paper version.
- All designs and software are subject to change without prior written notice. Product updates might result in some differences appearing between the actual product and the manual. Please contact customer service for the latest program and supplementary documentation.
- There might be errors in the print or deviations in the description of the functions, operations and technical data. If there is any doubt or dispute, we reserve the right of final explanation.
- Upgrade the reader software or try other mainstream reader software if the manual (in PDF format) cannot be opened.
- All trademarks, registered trademarks and company names in the manual are properties of their respective owners.
- Please visit our website, contact the supplier or customer service if any problems occur while using the device.
- If there is any uncertainty or controversy, we reserve the right of final explanation.

Important Safeguards and Warnings

This chapter describes the contents covering proper handling of the Device, hazard prevention, and prevention of property damage. Read these contents carefully before using the Device, comply with them when using, and keep it well for future reference.

Operation Requirements

- Do not place or install the Device in a place exposed to sunlight or near the heat source.
- Keep the Device away from dampness, dust or soot.
- Keep the Device installed horizontally on the stable place to prevent it from falling.
- Wall-mounting is not supported.
- Do not drop or splash liquid onto the Device, and make sure there is no object filled with liquid on the Device to prevent liquid from flowing into the Device.
- Install the Device in a well-ventilated place, and do not block the ventilation of the Device.
- Operate the device within the rated range of power input and output.
- Do not dissemble the Device.
- Transport, use and store the Device under the allowed humidity and temperature conditions.

Electrical Safety

- Use the battery of specified manufacturer; otherwise there might result in explosion. When replacing battery, make sure the same type is used. Improper battery use might result in fire, explosion, or inflammation.
- Follow the instructions to dispose of the used battery.
- Use the recommended power cables in the region and conform to the rated power specification.
- Use the power adapter provided with the Device, or adapter meets the LPS standard; otherwise, it might result in people injury and device damage.
- The power supply must conform to the requirements of ES1 in IEC 62368-1 standard and be no higher than PS2. Note that the power supply requirements are subject to the device label.
- Connect the device (I-type structure) to the power socket with protective earthing.
- The appliance coupler is a disconnection device. When using the coupler, keep the angle for easy operation.

ahua

1 Introduction

1.1 Overview

The Device is an excellent digital monitor product for security industry. The embedded LINUX OS assures the stable operation. The H.265 and G.711 technologies assure the high quality image and low bit stream. The frame-by-frame play function displays more details for analysis, and provides the functions such as record, playback, and monitor and assures the synchronization for audio and video. The Device also adopts the advanced control technology and great network data transmission capability.

The Device adopts embedded design to achieve high security and reliability. It can work in the local end and, with strong networking capability it can get connected to the professional surveillance software (Smart PSS) to form a security network to show its powerful remote monitoring function.

The Device is applicable to the areas such as bank, telecom, electricity, traffic, intelligent residential district, factory, warehouse, resources, and water conservancy facilities.

1.2 Functions

The functions might be different depending on the software and hardware versions of the model you purchased.

AI Function

- Support face detection that analyzes the attributes such as age, gender, glasses, beard, mask, and then make structured of these data to store for quick search.
- Support face recognition that compares the captured face snapshot with the face database and link the configured alarms (face detection should be enabled).
- Support searching by picture that is convenient for finding the target picture from database.
- Support 16 channel IVS function that includes tripwire and intrusion detection. The IVS function can avoid wrong alarms by filtering the factors such as rains, light, and animals.
- Calculate the quantity of detected humans within 24 hours.
- Detect the vehicles passing by within 24 hours.

Real-time Surveillance

- Support VGA port and HDMI port to realize the surveillance through monitors.
- Support HDMI, VGA, and TV output at the same time.

IoT Management

Provide specific management module for IoT features including humidity and temperature data reports and alarms linkage.

Sensor Integration

Integrate coaxial cameras with diverse array of sensors such as temperature, humidity and wireless alarm devices.

Storage Management

- Special data format to guarantee data security and avoid the risk of modifying data viciously.
- Support digital watermark.

Compression Format

Support multiple-channel audio and video signal. An independent hardware decodes the audio and video signal from each channel to maintain video and audio synchronization.

Backup Function

- Support backup operation through USB port (such as USB storage disk, portable HDD, and burner).
- Client-end user can download the file from local HDD through network to backup.

Record & Playback

- Support each channel real-time record independently, and simultaneously support the functions such as search, backward play, network monitor, record search, and download.
- Support various playback modes: slow play, fast play, backward play and frame by frame play.
- Support time title overlay so that you can view event accurate occurred time.
- Support zooming in the selected area in the live view.

Network Operation

Support network remote real-time monitor, remote record search and remote PTZ control.

Alarm Activation

- Several relay alarm outputs to realize alarm activation and on-site light control.
- The alarm input port and output port have the protection circuit to guarantee the Device safety.

Communication Port

- RS-485 port can realize alarm input and PTZ control.
- RS-232 port can connect to keyboard, COM port of PC or the matrix control.
- Standard Ethernet port can realize network remote access function.
- The dual-network port has the multi-address, fault tolerance, load balance setup mode.

PTZ Control

Support PTZ decoder through RS-485 port.

Intelligent Operation

- Support mouse operation function.
- Support "copy and paste" function for the same settings.

UPnP (Universal Plug and Play)

Establish mapping connection between LAN and WAN through UPnP protocol.

Camera Self-adaptive

Auto-recognize and work with the PAL or NTSC camera and HD camera.

2 Getting Started

2.1 Checking the Components

The actual appearance, component, or quantity might be different depending on the model you purchased.

When you receive the Device, check against the following checking list. If any of the items are missing or damaged, contact the local retailer or after-sales engineer immediately.

No.	Checking It	tems	Requirements
1	Package	Appearance	No obvious damage.
		Packing materials	No broken or distorted positions that could be caused by hit.
2	Labels	Labels on the device	Not torn up. Do not tear up or throw away the labels; otherwise the warranty services are not ensured. You need to provide the serial number of the product when you call the after-sales service.
		Appearance	No obvious damage.
3	Device	Data cables, power cables, fan cables, mainboard	No connection loose.

2.2 Installing HDD

Check whether the HDD is already installed in the Device when you first time using the Device. We recommend you to use the HDD recommended officially. Do not use the PC HDD.

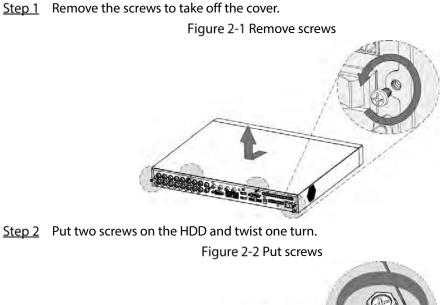

A

Shut down the device and then unplug the power cable before you open the case to replace the HDD.

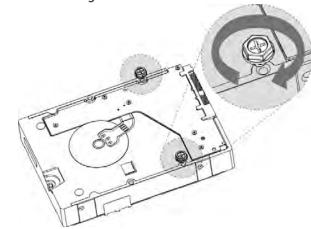

2.2.1 DH-XVR42xxAN-I/DH-XVR52xxAN-I2/DH-XVR52xxA-I2/DH-XVR52xxAN-4KL-I2/DH-XVR52xxA-4KL-I2/DH-XVR52xxAN-I3/DH-XVR52xxA-I3/DH-XVR52xxAN-4KL-I3/DH-XVR52xxA-4KL-I3/DH-XVR7208A-4KL-I/DH-XVR7216A-4KL-I/DH-XVR72xxA-4K-I2/DH-XVR7216AN-4K-I2/DH-XVR8216A-4KL-I/DH-XVR8208A-4K-I/DH-XVR8208A-4KL-I

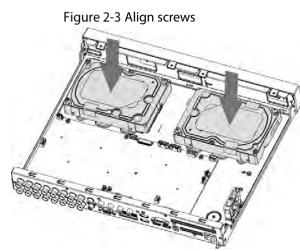

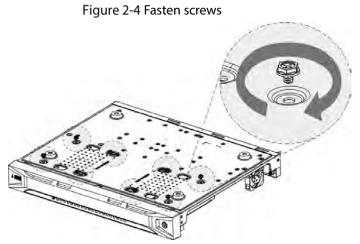

<u>Step 3</u> Align the two screws with the holes on the device.

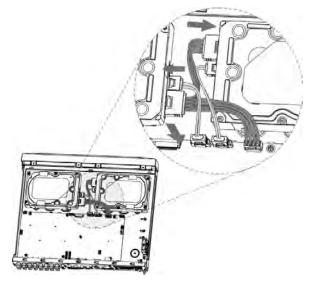

<u>Step 4</u> Turn the device and put in the other two screws, and then fasten all screws to fix the HDD to the device.

<u>Step 5</u> Use power cable and data cable to connect the device and HDD. Figure 2-5 Connect cables

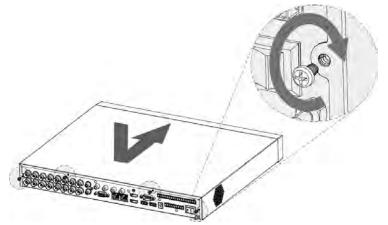

<u>Step 6</u> Put back the cover and fasten the screws.

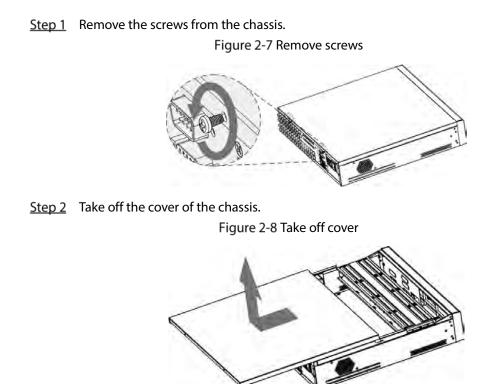

Figure 2-6 Put back cover

2.2.2 DH-XVR8816S-4KL-I/DH-XVR5808S-I2/DH-XVR5816S-I2/DH-XVR5832S-I2/DH-XVR5816S-4KL-I2/DH-XVR5832S-4KL-I2/DH-XVR7808S-4K-I2/DH-XVR7816S-4K-I2/DH-XVR5816S-4KL-I2-LP/DH-XVR7816S-4KL-X-LP-V2

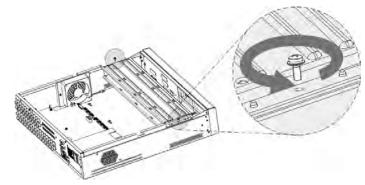

<u>Step 3</u> Remove the screws from the drive bracket to take it off.

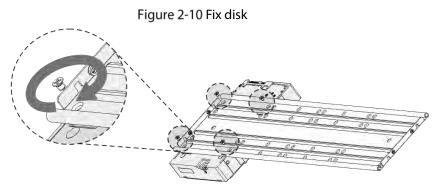

Figure 2-9 Take off drive bracket

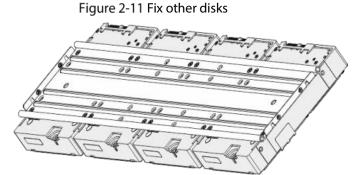

<u>Step 4</u> Align the four screw holes on the disk to those on the drive bracket and fix the disk on the bracket.

<u>Step 5</u> Fix other disks on the bracket as needed.

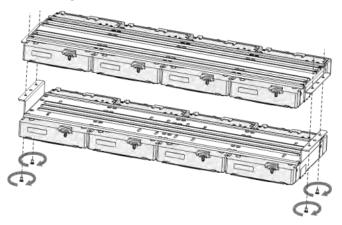

<u>Step 6</u> Fix the two drive brackets.

 \square

This is only needed on models with 8 bays.

Figure 2-12 Fix drive brackets

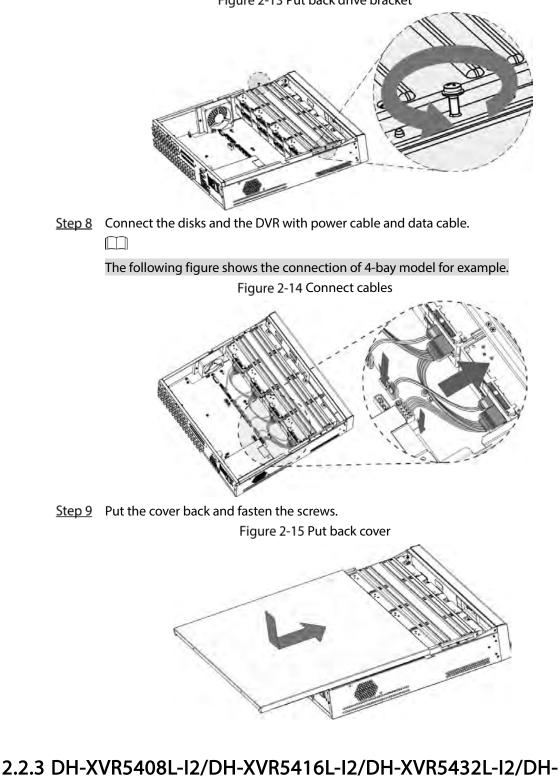

<u>Step 7</u> Put the drive brackets back and fix them in the DVR.

Figure 2-13 Put back drive bracket

XVR5416L-4KL-I2/DH-XVR5432L-4KL-I2/DH-XVR7408L-4K-I2/DH-XVR7416L-4K-I2

<u>Step 1</u> Remove the fixing screws from the rear panel.

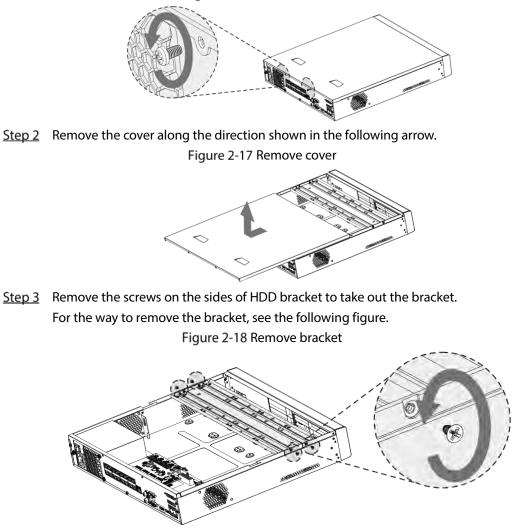

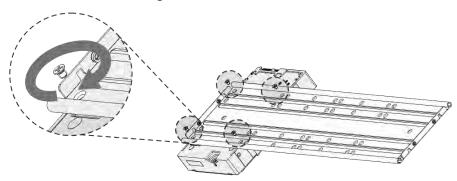

Figure 2-16 Remove screws

<u>Step 4</u> Match the four screw holes on the HDD with the four holes on the bracket and then fasten the screws. The HDD is fixed to the bracket.

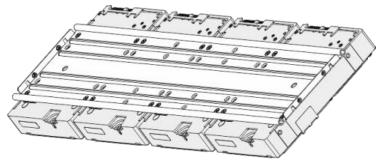

Figure 2-19 Fix HDD

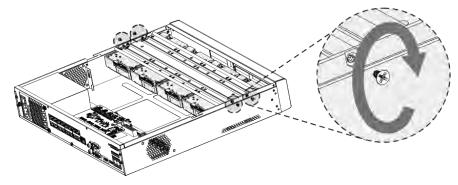

<u>Step 5</u> Install the other HDDs.

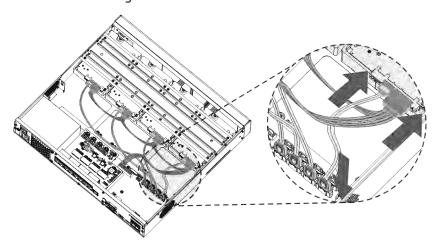

Figure 2-20 Install other HDDs

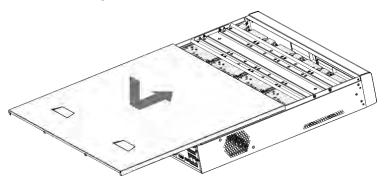

<u>Step 6</u> Place the bracket to the device and then fasten the screws on the sides of the bracket. Figure 2-21 Fasten screws

<u>Step 7</u> Connect the HDD data cable and power cable to the device. Figure 2-22 Connect cables

<u>Step 8</u> Put back the cover and fasten the screws on the rear panel to complete the installation. Figure 2-23 Put back cover

lcon	Name	Function
0	HDD status indicator	The indicator is off when the HDD is running normally.The indicator glows blue when the HDD is in malfunction.
ወ	Power status indicator	 The indicator is off when the power is connected abnormally. The indicator glows blue when the power is connected normally.
品	Network status indicator	 The indicator is off when the network connection is correct. The indicator glows blue when the network connection is abnormal.

3.2 Rear Panel

3.2.1 DH-XVR5104H-I/DH-XVR5108H-I/DH-XVR5116H-I/DH-XVR51xxH-I2/DH-XVR51xxHE-I2/DH-XVR51xxH-4KL-I2/DH-XVR51xxHE-4KL-I2/DH-XVR51xxH-I3/DH-XVR51xxHE-I3/DH-XVR51xxH-4KL-I3/DH-XVR51xxHE-4KL-I3/DH-XVR7104HE-4KL-I/DH-XVR7108HE-4KL-I/DH-XVR7116HE-4KL-I/DH-XVR71xxH-4K-I2/DH-XVR71xxHE-4K-I2

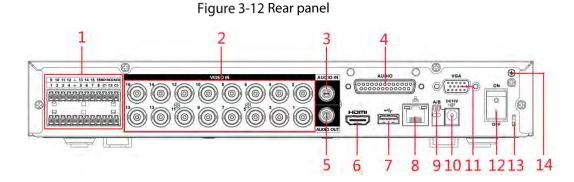

Table 3-11 Rear panel description

No.	Port Name	Function		
1	Alarm input port 1–16	Four groups of alarm input ports (Group 1: port 1 to port 4; Group 2: port 5 to port 8; Group 3: port 9 to port 12; Group 4: port 13 to port 16). These ports receive the signal from the external alarm source. There are two types: NO (Normally Open) and NC (Normally Closed).		
	Alarm output port 1–3 (NO1–NO3; C1–C3)	 Three groups of alarm output ports (Group 1: port NO1–C1, Group 2: port NO2–C2, Group 3: port NO3–C3). These ports output alarm signal to the alarm device. Make sure power supply to the external alarm device. NO: Normally open alarm output port. C: Alarm output public end. 		
	Ŧ	Ground.		
2	Video input port	Connects to analog camera to input video signal.		
3	Audio input port	Receives audio signal output from the devices such as microphone. It corresponds to video input port 1.		

No.	Port Name	Function
4	DB25 port	Connects to the audio splitter taken from the package to convert to audio input port which receives the audio signal from devices such as microphone. It corresponds to video input ports 2–16.
5	Audio output port	Outputs audio signal to the devices such as the sound box.
6	HDMI port	High definition audio and video signal output port. The port outputs the uncompressed high definition video and multi-channel audio data to the connected display with HDMI port.
7	USB port	Connects to external devices such as USB storage device, keyboard and mouse.
8	Network port	Connects to Ethernet port.
9	RS-485 communication port	Connects to the control devices such as speed dome PTZ. RS-485_A port is connected by the cable A and RS-485_B is connected to the cable B.
10	Power input port	Inputs 12 VDC power.
11	VGA port	Outputs analog video data to the connected display with VGA port.
12	Power button	Turns on/off the DVR.
13	Power cable fastener	Use a cable tie to secure the power cable on the DVR to prevent loss.
14	ŧ	Ground terminal.

Table 3-12 Rear panel description

No.	Port Name	Function
1	Video input port	Connects to analog camera to input video signal.
2	Audio input port	Receives audio signal output from the devices such as microphone.

No.	Port Name	Function
3	Audio output port	Outputs audio signal to the devices such as the sound box.
4	HDMI port	High definition audio and video signal output port. The port outputs the uncompressed high definition video and multi- channel audio data to the connected display with HDMI port.
5	Network port	Connects to Ethernet port.
6	RS-485 communication port	Connects to the control devices such as speed dome PTZ. RS-485_A port is connected by the cable A and RS-485_B is connected to the cable B.
7	VGA port	Outputs analog video data to the connected display with VGA port.
8	USB port	Connects to external devices such as USB storage device, keyboard and mouse.
9	Power input port	Inputs 12 VDC power.
10	Power cable fastener	Use clamp to secure the power cable on the DVR in case there is any loss.
11	ŧ	Ground terminal.

3.2.3 DH-XVR42xxAN-I/DH-XVR52xxAN-I2/DH-XVR52xxA-I2/DH-XVR52xxAN-4KL-I2/DH-XVR-52xxA-4KL-I2/DH-XVR52xxAN-I3/DH-XVR52xxA-I3/DH-XVR52xxAN-4KL-I3/DH-XVR-52xxA-4KL-I3/DH-XVR7208A-4KL-I/DH-XVR7216A-4KL-I/DH-XVR72xxA-4K-I2/DH-XVR7216AN-4K-I2

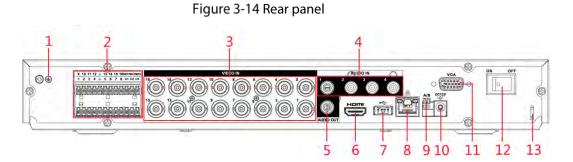

Table 3-13 Rear panel description

No.	Port Name	Function
1	÷	Ground terminal.

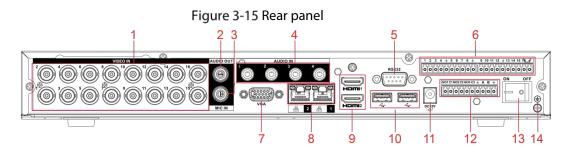

No.	Port Name	Function
2	Alarm input port 1–16	Four groups of alarm input ports (Group 1: port 1 to port 4; Group 2: port 5 to port 8; Group 3: port 9 to port 12; Group 4: port 13 to port 16). These ports receive the signal from the external alarm source. There are two types: NO (Normally Open) and NC (Normally Closed).
	Alarm output port 1–3 (NO1–NO3; C1–C3)	 alarm input device and the DVR connect to the same ground. Three groups of alarm output ports. (Group 1: port NO1- C1,Group 2: port NO2-C2,Group 3: port NO3-C3)). These ports output alarm signal to the alarm device. Make sure power supply to the external alarm device. NO: Normally open alarm output port. C: Alarm output public end.
	上	Ground.
3	Video input port	Connects to analog camera to input video signal.
4	Audio input port	Receives audio signal output from the devices such as microphone.
5	Audio output port	Outputs audio signal to the devices such as the sound box.
6	HDMI port	High definition audio and video signal output port. The port outputs the uncompressed high definition video and multi- channel audio data to the connected display with HDMI port.
7	USB port	Connects to the external devices such as keyboard, mouse, and USB storage device.
8	Network port	Connects to Ethernet port.
9	RS-485 communication port	Connects to the control devices such as speed dome PTZ. RS-485_A port is connected by the cable A and RS-485_B is connected to the cable B.
10	Power input port	Inputs 12 VDC power.
11	VGA port	Outputs analog video data to the connected display with VGA port.
12	Power button	Turns on/off the DVR.
13	Power cable fastener	Use clamp to secure the power cable on the DVR in case there is any loss.

3.2.4 DH-XVR8216A-4KL-I/DH-XVR8208A-4K-I/DH-XVR8208A-4KL-I

No.	Port Name	Function
1	Video input port	Connects to analog camera to input video signal.
2	Audio output port	Outputs audio signal to the devices such as the sound box.
3	MIC IN	Two-way talk input port which receives analog audio signal output from the devices such as microphone and pickup.
4	Audio input port	Receives audio signal output from the devices such as microphone.
5	RS-232 debug COM	The port is used for general COM debug to configure IP address or transfer transparent COM data.
6	Alarm input port 1–16	4 groups of alarm input ports (Group 1: port 1 to port 4; Group 2: port 5 to port 8; Group 3: port 9 to port 12; Group 4: port 13 to port 16). These ports receive the signal from the external alarm source. There are two types: NO (normal open) and NC (normal close).
		the input device and the DVR connect to the same ground.
	(Ground terminal.
7	VGA port	Outputs analog video data to the connected display with VGA port.
8	Network port	Connects to Ethernet port.
9	HDMI port	High definition audio and video signal output port. The port outputs the uncompressed high definition video and multi-channel audio data to the connected display with HDMI port.
10	USB port	Connects to the external devices such as keyboard, mouse, and USB storage device.
11	Power input port	Inputs power.

Table 3-14 Rear panel description

No.	Port Name	Function
12	Alarm output port 1– 5 (NO1–NO5; C1–C5; NC5)	 5 groups of alarm output ports (Group 1: port NO1–C1,Group 2: port NO2–C2,Group 3: port NO3–C3, Group 4: port NO4–C4, Group 5: port NO5, C5, NC5). These ports output alarm signal to the alarm device. Make sure power supply to the external alarm device. NO: Normal open alarm output port. C: Alarm output public end. NC: Normal close alarm output port.
13	Power button	Turns on/off the DVR.
14	Ŧ	Ground.

3.2.5 DH-XVR8816S-4KL-I/DH-XVR58xxS-I2/DH-XVR58xxS-4KL-I2/DH-

XVR78xxS-4K-I2

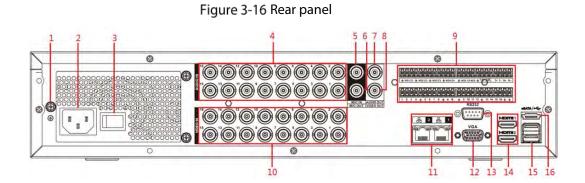

Table 3-15 Rear panel description

No.	Port Name	Function
1	GND	Ground.
2	Power input port	Inputs power.
3	Power button	Turns on/off the Device.
4	Audio input port	Receives the analog audio signal output from the devices such as microphone.
5	Audio input port (MIC IN)	Tow-way talk input port which receives the analog audio signal output from the devices such as microphone, pickup.
6	Audio output port (MIC OUT)	Tow-way talk output port which outputs the analog audio signal to the devices such as the sound box.
7	Audio output port	Outputs the analog audio signal to the devices such as the sound box.
8	Video output port	Connect to video output devices such as TV.

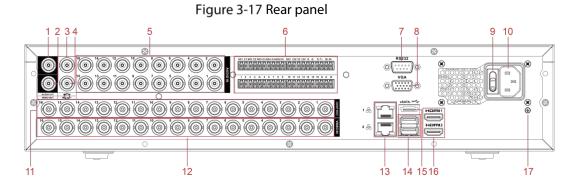

No.	Port Name	Function	
9	Alarm input port 1–16	 Four groups of alarm output ports (Group 1: port 1 to port 4; Group 2: port 5 to port 8; Group 3: port 9 to port 12; Group 4: port 13 to port 16). These ports receive the signal from the external alarm source. There are two types; NO (Normally Open) and NC (Normally Closed). When your alarm input device is using external power, make sure the device and the NVR have the same ground. 	
	Alarm output port 1–5 (NO1–NO5; C1–C5; NC5)	 Five groups of alarm output ports. (Group 1: port NO1– C1,Group 2: port NO2–C2,Group 3: port NO3–C3, Group 4: port NO4–C4, Group 5: port NO5, C5, NC5). These ports output alarm signal to the alarm device. Make sure power supply to the external alarm device. NO: Normally open alarm output port. C: Alarm output public end. NC: Normally closed alarm output port. 	
	RS-485 communication port	You can connect to the control devices such as speed dome PTZ. RS-485_A port is connected by the cable A and RS-485_B is connected to the cable B.	
	Four-wire full- duplex RS-485 port (T+, T-, R+, R-)	Four-wire full-duplex 485 port. T+ and T- is the output wire; R+ and R- is the input wire.	
	Control power output (CTRL 12V)	Controls 12 VDC power output. It is to control the on-off alarm relay output.	
	12V power output port	Provides power to external devices such as camera and alarm device. Note the supplying power shall be below 1A.	
	÷	Ground.	
10	Video input port	Connect to analog camera to input video signal.	
11	Network port	Connects to Ethernet port.	
12	VGA video output	Outputs analog video signal. It can connect to the monitor to view analog video.	
13	RS-232 debug COM.	It is for general COM debug to configure IP address or transfer transparent COM data.	
14	HDMI port	High definition audio and video signal output port. It outputs the same video source as VGA. It supports 4K resolution output and supports mouse operation and control. Note when the HDMI output resolution is 4K, the VGA output stops.	
15	USB port	Connects to the external devices such as keyboard, mouse, and USB storage device.	
16	eSATA port	External SATA port which connects to the device with SATA port. Perform the jumper configuration when connecting HDD.	

3.2.6 DH-XVR5816S-4KL-I2-LP/DH-XVR7816S-4KL-X-LP-V2

No.	Port Name	Function
1	Audio output port	Outputs the analog audio signal to the devices such as the sound box.
2	Video output port	Connect to video output devices such as TV.
3	Audio input port (MIC IN)	Tow-way talk input port which receives the analog audio signal output from the devices such as microphone, pickup.
4	Audio output port (MIC OUT)	Tow-way talk output port which outputs the analog audio signal to the devices such as the sound box.
5	Audio input port	Receives the analog audio signal output from the devices such as microphone.
6	Alarm input port 1–16	 Four groups of alarm output ports (Group 1: port 1 to port 4; Group 2: port 5 to port 8; Group 3: port 9 to port 12; Group 4: port 13 to port 16). These ports receive the signal from the external alarm source. There are two types; NO (Normally Open) and NC (Normally Closed). When your alarm input device is using external power, make sure that the device and the NVR have the same ground.
	Alarm output port 1–5 (NO1–NO5; C1–C5; NC5)	 Five groups of alarm output ports. (Group 1: port NO1– C1,Group 2: port NO2–C2,Group 3: port NO3–C3, Group 4: port NO4–C4, Group 5: port NO5, C5, NC5). These ports output alarm signal to the alarm device. Make sure that power supply to the external alarm device. NO: Normally open alarm output port. C: Alarm output public end. NC: Normally closed alarm output port.
	RS-485	You can connect to the control devices such as speed dome PTZ.
	communication port	RS-485_A port is connected by the cable A and RS-485_B is connected to the cable B.

Table 3-16 Rear panel description

No.	Port Name	Function
	Four-wire full- duplex RS-485 port (T+, T-, R+, R-)	Four-wire full-duplex 485 port. T+ and T- is the output wire; R+ and R- is the input wire.
	Control power output (CTRL 12V)	 Controls the 6th channel power output for alarm. Turns off power output when there is alarm output. Turns on power output when the alarm is cleared.
	12V power output port	Provides power to external devices such as camera and alarm device. Note the supplying power shall be below 1A.
	G	Ground.
7	RS-232 debug COM.	It is for general COM debug to configure IP address or transfer transparent COM data.
8	VGA video output	Outputs analog video signal. It can connect to the monitor to view analog video.
9	Power button	Turns on/off the Device.
10	Power input port	Inputs power.
11	Loop out	Outputs the video signal of the corresponding video input port.
12	Video input port	Connect to analog camera to input video signal.
13	Network port	Connects to Ethernet port.
14	USB port	Connects to the external devices such as keyboard, mouse, and USB storage device.
15	eSATA port	External SATA port which connects to the device with SATA port. Perform the jumper configuration when connecting HDD.
16	HDMI port	High definition audio and video signal output port. It outputs the same video source as VGA. It supports 4K resolution output and supports mouse operation and control. Note when the HDMI output resolution is 4K, the VGA output stops.
17	GND	Ground.

11	Network port	Connects to Ethernet port.
12	eSATA port	External SATA port which connects to the device with SATA port. Perform the jumper configuration when connecting HDD.
13	HDMI port	High definition audio and video signal output port. It outputs the same video source as VGA. It supports 4K resolution output and supports mouse operation and control. Note when the HDMI output resolution is 4K, the VGA output stops.
14	Power button	Turns on/off the Device.
15	Power input port	Inputs power.
16	GND	Ground.

3.2.8 DH-XVR1B16-I/DH-XVR1B08-I/DH-XVR1B08H-I/DH-XVR1B04-

I/DH-XVR1B04H-I/DH-XVR1B16H-I

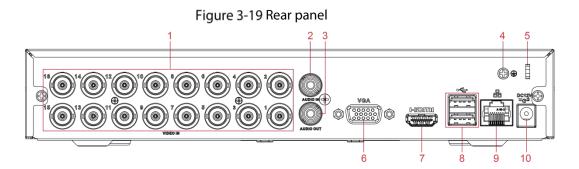

Table 3-18 Rear panel description

No.	Port Name	Function
1	Video input port	Connect to analog camera to input video signal.
2	Audio input port	Receives the analog audio signal output from the devices such as microphone.
3	Audio output port	Outputs the analog audio signal to the devices such as the sound box.
4	GND	Ground.
5	Power cable fastener	Use clamp to secure the power cable on the DVR in case there is any loss.
6	VGA video output	Outputs analog video signal. It can connect to the monitor to view analog video.
7	HDMI port	High definition audio and video signal output port. It outputs the same video source as VGA. It supports 4K resolution output and supports mouse operation and control. Note when the HDMI output resolution is 4K, the VGA output stops.
8	USB port	Connects to the external devices such as keyboard, mouse, and USB storage device.
9	Network port	Connects to Ethernet port.
10	Power input port	Inputs power.

3.2.9 DH-XVR5104C-I3/DH-XVR5108C-I3/DH-XVR5104C-4KL -I3

<u></u>0 # 0 Õ 0 ~ IDEO IN 0-0500000 - \odot DC12V ----6-----2 3 5 4 6

Figure 3-20 Rear panel

Table 3-19 Rear panel de	escription
--------------------------	------------

No.	Port Name	Function
1	Video input port	Connects to analog camera to input video signal.
2	USB port	Connects to external devices such as USB storage device, keyboard and mouse.
3	VGA port	Outputs analog video data to the connected display with VGA port.
4	HDMI port	High definition audio and video signal output port. The port outputs the uncompressed high definition video and multi- channel audio data to the connected display with HDMI port.
5	Network port	Connects to Ethernet port.
6	Power input port	Inputs 12 VDC power.
7	Ð	Ground terminal.

3.3 Remote Control Operations

Note the remote control is not our standard accessory and might not be included in the accessary bag. It is supplied dependent on the model you purchased.

Figure 3-21 Remote control

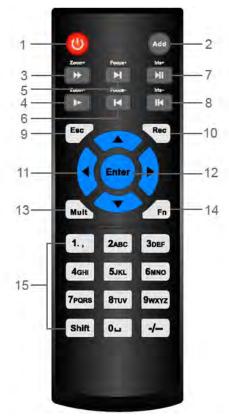

Table 3-20 Remote control description

No.	Name	Function
1	Power button	Press this button to boot up or shut down the device.
2	Address	Press this button to input device serial number, so that you can control the Device.
3	Forward	Multi-step forward speed and normal speed playback.
4	Slow motion	Multi-step slow motion speed or normal playback.
5	Next record	In playback state, press this button to play back the next video.
6	Previous record	In playback state, press this button to play back the previous video.
7	Play/Pause	 In normal playback state, press this button to pause playback. In pause state, press this button to resume to normal playback. In live view window page, press this button to enter video search menu.
8	Reverse/pause	In the reverse playback state, press this button to pause reverse playback. In the reverse playback pause state, press this button to resume to playback reversing state.
9	Esc.	Go back to previous menu or cancel current operation (close front page or control).

No.	Name	Function
10	Record	 Start or stop record manually. In record page, use the direction buttons to select the channel that you want to record. Press this button for at least 1.5 seconds, and the manual record page will be displayed.
11	Direction keys	Switch between current activated controls by going left or right. In playback state, the keys control the playback progress bar. Aux function (such as operating the PTZ menu).
12	Enter/menu key	 Confirms an operation. Go to the OK button. Go to the menu.
13	Multiple-window switch	Switch between multiple-window and one-window.
14	Fn	 In single-channel monitoring mode, press this button to display the PTZ control and color setting functions. Switch the PTZ control menu in PTZ control page. In motion detection page, press this button with direction keys to complete setup. In text mode, press and hold this button to delete the last character. To use the clearing function: Long press this button for 1.5 seconds. In HDD menu, switch HDD recording time and other information as indicated in the pop-up message.
15	Alphanumeric keys	 Input password, numbers. Switch channel. Press Shift to switch the input method.

3.4 Mouse Operations

The operations are based on the considerations for right-handed users.

Table 3-21 Mouse operations

Operation	Function
	Password input dialogue box pops up if you have not logged in yet.
	In live view window page, you can go to the main menu.
	When you have selected one menu item, click it to view menu content.
Click left mouse	Implement the control operation.
button	Modify checkbox or motion detection status.
	Click combo box to pop up drop-down list.
	In text box, click the corresponding button on the panel to enter a numeral or
	English character (small/capitalized).

Operation	Function
	• In English input mode: Click 🛄 to enter a backspace and click 📰 to
	delete the previous character.
	!?@#\$% = + * ← 123 qwertyuiop/ asdfghjk1:Enter zxcvbnm,.Shift 0&
	• In numeral input mode: Click 🔲 to clear and click 🔚 to delete the
	previous character.
	$ \begin{array}{c ccccccccccccccccccccccccccccccccccc$
	Implement special control operations such as double-click one item in the file
Double-click left	list to play back the video.
mouse button	In multiple-window mode, double-click one channel to view in full-window.
	Double-click current video again to go back to previous multiple-window mode.
	Right-click in live view window page, the shortcut menu is displayed. For
Right-click	different series product, the shortcut menu may vary.
	Exit current menu without saving the modification.
	In numeral input box: Increase or decrease numeral value.
Click scroll wheel button	Switch the items in the combo box.
	Page up or page down.
Point to select and move	Select current control and move it.
Dragging a	Select motion detection zone.
selection box with left mouse button	Select privacy mask zone.

4 Connecting Basics

This chapter introduces the typical connection diagrams and ports connections.

4.1 Typical Connection Diagram

\square

The following figure is for reference only and might differ from the actual product. Figure 4-1 Connection diagram

4.2 Connecting to Video and Audio Input and Output

4.2.1 Video Input

The video input port is BNC. The input video format includes: PAL/NTSC BNC (1.0 V_{P-P} , 75 Ω).

The video signal should comply with your national standards.

The input video signal shall have high SNR, low distortion; low interference, natural color, and suitable lightness.

Guarantee the stability and reliability of the camera signal

The camera shall be installed in a cool, dry place away from the conditions such as direct sunlight, inflammable, and explosive substances.

The camera and the DVR should have the same grounding to ensure the normal operation of the camera.

Guarantee stability and reliability of the transmission line

Use high quality, sound shielded BNC. Select suitable BNC model according to the transmission distance.

If the distance is too long, you should use twisted pair cable, and you can add video compensation devices or use optical fiber to ensure video quality.

You should keep the video signal away from the strong electromagnetic interference, especially the high tension current.

Keep connection lugs in well contact

The signal line and shielded wire should be fixed firmly and in well connection. Avoid dry joint, lap welding, and oxidation.

4.2.2 Video Output

Video output includes a BNC (PAL/NTSC1.0 V_{P-P} , 75 Ω) output, a VGA output, and HDMI output. System supports BNC, VGA and HDMI output at the same time.

When you are using pc-type monitor to replace the monitor, pay attention to the following points:

- To defer aging, do not allow the pc monitor to run for a long time.
- Regular demagnetization will keep device maintain proper status.
- Keep it away from strong electromagnetic interference devices.

Using TV as video output device is not a reliable substitution method. You also need to reduce the working hour and control the interference from power supply and other devices. The low quality TV may result in device damage.

4.2.3 Audio Input

This series of products audio input port adopt BNC port.

Due to high impedance of audio input, use active sound pick-up.

Audio transmission is similar to video transmission. Try to avoid interference, dry joint, loose contact and it shall be away from high tension current.

4.2.4 Audio Output

The audio output signal parameter is usually over 200 mv 1 K Ω (BNC or RCA). It can directly connect to low impedance earphone, active sound box or amplifier-drive audio output device.

If the sound box and the pick-up cannot be separated spatially, it is easy to arouse squeaking. In this case you can adopt the following measures:

- Use better sound pick-up with better directing property.
- Reduce the volume of the sound box.
- Using more sound-absorbing materials in decoration can reduce voice echo and improve acoustics environment.
- Adjust the layout of speaker and pickup to reduce squeaking.

4.3 Connecting to Alarm Input and Output

Read the followings before connecting.

Alarm input

- Make sure alarm input mode is grounding alarm input.
- Grounding signal is needed for alarm input.
- Alarm input needs the low level voltage signal.
- Alarm input mode can be either NC (Normally Closed) or NO (Normally Open).
- When you are connecting two DVRs or you are connecting one DVR and one other device, use a relay to separate them.

Alarm output

The alarm output port should not be connected to high power load directly (It shall be less than 1A) to avoid high current which might result in relay damage. Use the contactor to realize the connection between the alarm output port and the load.

How to connect PTZ decoder

- Ensure the decoder has the same grounding with DVR; otherwise the PTZ might not be controlled. Shielded twisted wire is recommended and the shielded layer is used to connect to the grounding.
- Avoid high voltage. Ensure proper wiring and some thunder protection measures.
- For too long signal wires, 120 Ω should be parallel connected between A, B lines on the far end to reduce reflection and guarantee the signal quality.
- "485 A, B" of DVR cannot parallel connect with "485 port" of other device.
- The voltage between of A, B lines of the decoder should be less than 5 V.

Make sure the front-end device has soundly earthed

Improper grounding might result in chip damage.

4.3.1 Introducing Alarm Port

The alarm input ports are dependent on the model you purchased.

			F	∃ig	ur	e 4	-2	A	arr	n p	ort	S

10, 11, 12, 13, 14, 15,	ALARM 1 to ALARM 16. The alarm becomes active in low voltage.
16	

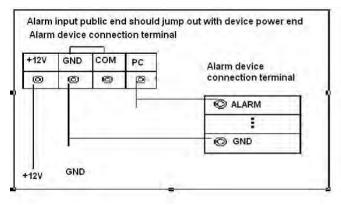

lcon	Description
NO1 C1, NO2 C2, NO3 C3	There are four groups of normally open activation output (on/off button).
÷	Ground cable.
485 A/B	485 communication port. They are used to control devices such as decoder. 120 Ω should be parallel connected between A, B lines if there are too many PTZ decoders.

4.3.2 Alarm Input

Refer to the following figure for more information.

- Grounding alarm inputs which includes NO (Normally Open) and NC (Normally Closed) type.
- Parallel connect COM end and GND end of the alarm detector (Provide external power to the alarm detector).
- Parallel connect the Ground of the DVR and the ground of the alarm detector.
- Connect the NC port of the alarm sensor to the DVR alarm input (ALARM).
- Use the same ground with that of DVR if you use external power to the alarm device.

Figure 4-3 Alarm input

4.3.3 Alarm Output

- Provide external power to external alarm device.
- To avoid overloading, read the following relay parameters table carefully.
- RS-485 A/B cable is for the A/B cable of the PTZ decoder.

4.3.4 Alarm Output Relay Parameters

 \square

Refer to the actual product for relay model information.

Table 4-2 Alarm output relay parameters

5 Local Configurations

Read the following notes prior to using the Device.

- \square
 - The figures in the Manual are used for introducing the operations and only for reference. The actual interface might be different dependent on the model you purchased.
- The Manual is a general document for introducing the product, so there might be some functions described for the Device in the Manual not apply to the model you purchased.
- Conventions for mouse operations on a menu.
 - ♦ Click: On the menu, left-click the mouse once on an option to enter the option setting.
 - Right-click: On any page, right-click the mouse once to return to the previous level. For details about mouse operations, see "3.4 Mouse Operations."

5.1 Initial Settings

5.1.1 Booting up

- Ensure the input voltage corresponds to the power requirement of the Device. Power on the Device after the power cable is properly connected.
- To protect the Device, connect the Device with the power cable first, and then connect to the power source.
- To ensure the stable work of the Device and the external devices connected to the Device and to
 prolong the HDD life, it is recommended to refer to the national related standard to use the power
 source that provides stable voltage with less interference from ripples. UPS power source is
 recommended.
- <u>Step 1</u> Connect the Device to the monitor.
- <u>Step 2</u> Plug in the power cable to the Device.
- <u>Step 3</u> Press the power button to turn on the Device. The power indicator light is on.
 - On the connected monitor, the live view screen is displayed by default. If you turn on the Device during the time period that is configured for recording, the system starts recording after it is turned on, and you will see the icon indicating recording status is working in the specific channels.

5.1.2 Initializing the Device

When booting up for the first time, you need to configure the password information for **admin** (by default).

\square

To secure the Device, it is strongly recommended for you to properly keep the password for admin and modify it regularly.

<u>Step 1</u> Turn on the Device.

Device Initialization			 ڻ ل
Location	Please select an item.		
Language	English		
Video Standard	PAL		

- <u>Step 2</u> Select your location from the drop-down list, then language and video standard will match your location automatically. You can change the language and video standard manually.
- Step 3 Click Next.

Figure 5-2 License agreement

DAHUA SOFTWARE LICENSE AGREEMENT	
1. PREAMBLE	
IMPORTANT NOTICE, PLEASE READ CAREFULLY:	
1.1 This Agreement is a Software License Agreement between you and Zhejiang Dahu.	a
Technology Co.,Ltd. (hereinafter referred to as 'Dahua'). Please read this software	
license agreement (hereinafter referred to as 'Agreement') carefully before using the	
Software. By using Dahua Software, you are deemed to agree to be bound by the term	IS
of this Agreement. If you do not agree to the terms of this Agreement, please do not	
install or use the Software, and click the 'disagree' button(If there is any provision for	
'agree' or 'disagree'). If the Software you get is purchased as part of Dahua device, an	cl
you do not agree to the terms of this Agreement, you may return this device/Software	
within the return period to Dahua or authorized distributor where you purchased from	
for a refund, but it should be subject to the Dahua's return policy.	
1.2 Consent to use of data	
✓ I have read and agree to all terms	

<u>Step 4</u> Select the checkbox that I have read and agree to all terms, and then click Next.

Answer			
Question 2	What was the first na	ame of your first boss?	
Answer			
Question 3	What is the name of y	your favorite fruit?	
Answer			

<u>Step 9</u> Configure the protection parameters for password.

After configuration, if you forget the password for admin user, you can reset the password through the reserved email address or security questions. For details about resetting the password, see "5.1.3 Resetting Password".

If you do not want to configure the settings, disable the email address and security questions functions on the page.

Table 5-2 Password protection parameters

Password	Description
Protection Mode	
	Enter the reserved email address.
Reserved Email	In the Reserved Email box, enter an email address for password reset. If you
Reserved Email	forget the password, enter the security code that you will get from this
	reserved email address to reset the password of admin.
	Configure the security questions and answers.
Security Questions	If you forget the password, enter the answers to the questions can make you
	reset the password.

If you want to configure the email or security questions fucntion later or you want to change the configurations, select **Main Menu > ACCOUNT > Password Reset**.

Step 10 Click OK to complete the settings.

Step 11 Select I have read and agree to all terms checkbox.

Step 12 Click Next.

The **Startup Wizard** page is displayed. For details about quick settings during startup, see "5.1.4 Setting Up with the Startup Wizard".

5.1.3 Resetting Password

You can reset the password by the following methods when you forget the password for admin account.

- If the password reset function is enabled, you can use mobile phone to scan the QR code to reset the password. For details, see "5.1.3.2 Resetting Password on Local Interface."
- If the password reset function is disabled, there are two situations:
 - If you configured security questions, you can find back the password by the security questions.
 - If you did not configure the security questions, you can only use the reset button on the mainboard to restore the Device to factory default. For details, see "5.1.3.3 Using Reset Button on the Mainboard."
 - \square

Not all models are provided with reset button.

5.1.3.1 Enabling Password Reset Function

<u>Step 1</u> Select Main Menu > Account > Password Reset.

Figure 5-7 Password reset

<u>Step 2</u> Enable the Password Reset function.

 \square

This function is enabled by default.

<u>Step 3</u> Click **Apply** to save the settings.

When Password reset function is disabled, you can retrieve password through following ways:

- You can retrieve password through resetting password on local interface or using Reset button on the mainboard when the device supports Reset button.
- You can only retrieve password through resetting password on local interface (make sure that security questions are preset) when the device does not support Reset button.

5.1.3.2 Resetting Password on Local Interface

<u>Step 1</u> Enter the login page.

- If you have configured unlock pattern, the unlock pattern login page is displayed. Click **Forgot Pattern**, the password login page is displayed.
- If you did not configure unlock pattern, the password login page is displayed. Click for the display the password with plaintext.

 \square

To log in from other user account, on the unlock pattern login page, click **Switch User**; or on the password login page, in the **User Name** list, select other users to login.

Figure 5-8 Login (1)

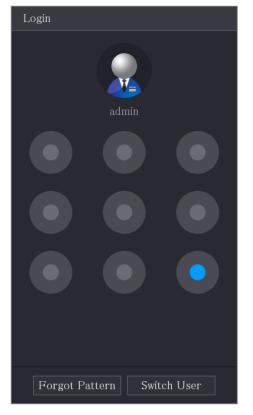

Figure 5-9 Login (2)

Login				
Username	admin			B
Password			0	P
_	OK	Cancel		
	OK			

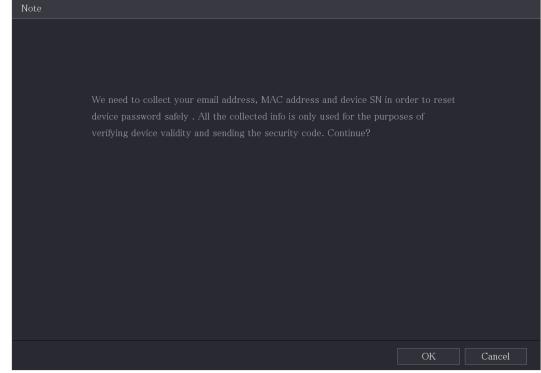

Step 2 Click

- If you have set the reserved email address, the **Prompt** message page is displayed.
- If you did not set the reserved email address, the email entering page is displayed. See Step 3. Enter the email address, and then click **Next**, the **Prompt** message page is displayed.

Figure 5-10 Note

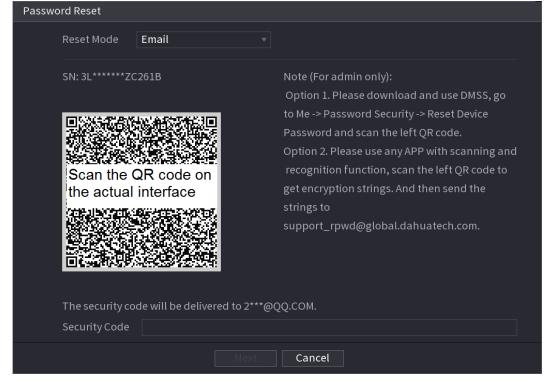

Step 3 Click OK.

\square

After clicking **OK**, the system will collect your information for password reset, and the information includes but not limited to email address, MAC address, and device serial number. Read the prompt carefully before clicking **OK**.

https://tm.by Интернет-магазин

Figure 5-12 Reset mode (app)

<u>Step 4</u> Reset the password.

• QR code

Follow the on-screen instructions to get the security code in your reserved email address. In the **Security Code** box, enter the security code.

\wedge

- You can get the security code twice by scanning the same QR code. If you need to get the security code once again, refresh the page.
- Use the security code received in your email box to reset the password within 24 hours; otherwise the security code becomes invalid.
- App

Select **QR Code for Binding Device** as **Reset Mode**, and then follow the on-screen instructions to get the security code on your DMSS app. In the **Security Code** box, enter the security code.

- Security questions
- For Reset Mode, select Security Questions.

If you did not configure the security questions before, in the **Reset Type** list, there will be no **Security Questions**.

2) In the **Answer** box, enter the correct answers.

Figure 5-13 Security questions

5.1.3.3 Using Reset Button on the Mainboard

You can always use the reset button on the mainboard to reset the Device to the factory default.

Not all models are provided with reset button.

- <u>Step 1</u> Disconnect the Device from power source, and then remove the cover panel. For details about removing the cover panel, see "2.2 Installing HDD."
- <u>Step 2</u> Find the reset button on the mainboard, and then press and hold the reset button for 5 seconds to 10 seconds.

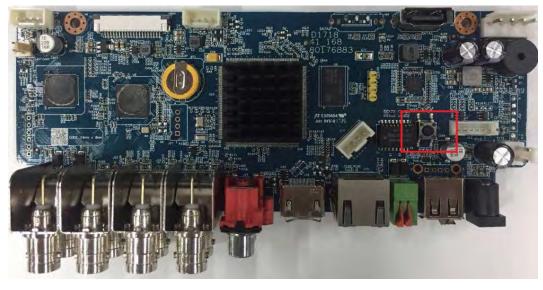

Figure 5-17 Reset button

<u>Step 3</u> Reboot the Device.

After the Device is rebooted, the settings have been restored to the factory default. You can start resetting the password.

5.1.4 Setting Up with the Startup Wizard

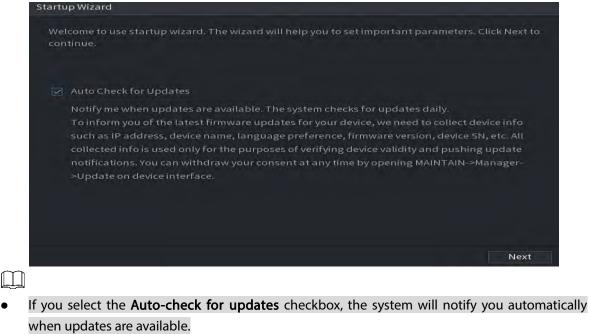

5.1.4.1 Entering Startup Wizard

The Startup Wizard helps you configure the basic settings to set up the Device. After you have initialized the Device, the **Startup Wizard** page is displayed.

Figure 5-18 Startup wizard

- After the auto-check function is enabled, to notify you to update timely, the system will collect the information such as IP address, device name, firmware version, and device serial number. The collected information is only used to verify the legality of the Device and push upgrade notices.
- If you clear the Auto-check for updates checkbox, the system will not perform automatic checks.

5.1.4.2 Configuring General Settings

You can configure the general settings for the Device such as Device name, language, and settings for instant playback.

You can also configure general settings by selecting **Main Menu > SYSTEM > General > Basic**. <u>Step 1</u> On the **Startup Wizard** page, click **Next**.

Table 5-3 Basic settings

https://tm.by Интернет-магазин

Parameter	Description
Device Name	In the Device Name box, enter the Device name.
Device No.	In the Device No. box, enter a number for the Device.
Language	In the Language list, select a language for the Device system.
Video Standard	In the Video Standard list, select PAL or NTSC according to your actual situation.
Instant Playback	In the Instant Playback box, enter the time length for playing back the recoded video.
Instant Playback	On the live view control bar, click the instant playback button to play back the recorded video within the configured time.
Logout Time	In the Logout Time box, enter the standby time for the Device. The Device automatically logs out when it is not working for the configured time period. You need to log in to the Device again. The value ranges from 0 to 60. 0 indicates there is not standby time for the Device. Click Monitor Channel(s) when logout . You can select the channels that you want to continue monitoring when you logged out.
Navigation Bar	Enable the navigation bar. When you click on the live view screen, the navigation bar is displayed.
Mouse Pointer	Adjust the speed of double-click by moving the slider.
Speed	The bigger the value is, the faster the double-clicking speed must be.

5.1.4.3 Configuring Date and Time Settings

You can configure the system time, choose the time zone, set the daylight saving time, and enable the NTP server.

You can also configure date and time settings by selecting **Main Menu > SYSTEM > General > Date &Time**.

<u>Step 1</u> After you have configured the general settings, on the **General** page, click **Next**.

Date Separator	In the Date Separator list, select a separator style for the date.
Time Format	In the Time Format list, select 12-HOUR or 24-HOUR for the time display style.
DST	Enable the Daylight Saving Time function. Click Week or click Date .
Start Time	Configure the start time and end time for the DST.
End Time	
NTP	Enable the NTP function to sync the Device time with the NTP server.
	If NTP is enabled, device time will be automatically synchronized with server.
Serve Address	In the Server Address box, enter the IP address or domain name of the corresponding NTP server. Click Manual Update , the Device starts syncing with the server immediately.
Port	The system supports TCP protocol only and the default setting is 123.
Interval	In the Interval box, enter the amount of time that you want the Device to sync time with the NTP server. The value ranges from 0 to 65535.

<u>Step 2</u> Configure the settings for date and time parameters.

5.1.4.4 Configuring Network Settings

You can configure the basic network settings such as net mode, IP version, and IP address of the Device. You can also configure network settings by selecting **Main Menu > NETWORK > TCP/IP**. <u>Step 1</u> After you have configured the date and time settings, on the **Date &Time** page, click **Next**.

Figure 5-21 TCP/IP

NIC Name	IP Address	Network	NIC Member	Modify	Unbind	
NIC1		Single NIC	1			
Address		Defau	lt Gateway:		MTU: 1500	
AC Address:		Subhe	et Mask:		Mode: Static	
Version	IPv4					
eferred DNS		B - B - 1				
ternate DNS		19 . B				
efaultCard	NIC1					
Test					Previous	Ne

<u>Step 2</u> Configure the settings for network parameters.

Table 5-4 Network parameters

Parameter Description			
Parameter	Description		
IP Version	In the IP Version list, you can select IPv4 or IPv6 . Both versions are supported for access.		
MAC Address	Displays the MAC address of the Device.		
DHCP	 Enable the DHCP function. The IP address, subnet mask and default gateway are not available for configuration once DHCP is enabled. If DHCP is effective, the obtained information will display in the IP Address box, Subnet Mask box and Default Gateway box. If not, all values show 0.0.0.0. If you want manually configure the IP information, disable the DHCP function first. If PPPoE connection is successful, the IP address, subnet mask, default gateway, and DHCP are not available for configuration. 		
IP Address	Enter the IP address and configure the corresponding subnet mask and		
Subnet Mask	default gateway.		
Default Gateway	IP address and default gateway must be in the same network segment.		
DNS DHCP	Enable the DHCP function to get the DNS address from router.		
Preferred DNS	In the Preferred DNS box, enter the IP address of DNS.		
Alternate DNS	In the Alternate DNS box, enter the IP address of alternate DNS.		
MTU	 In the MTU box, enter a value for network card. The value ranges from 1280 byte through 1500 byte. The default is 1500. The suggested MTU values are as below. 1500: The biggest value of Ethernet information package. This value is typically selected if there is no PPPoE or VPN connection, and it is also the default value of some routers, network adapters and switches. 1492: Optimized value for PPPoE. 1468: Optimized value for DHCP. 1450: Optimized value for VPN. 		
Test	Click Test to test if the entered IP address and gateway are interworking.		

5.1.4.5 Configuring P2P Settings

You can add the Device into your cell phone client or the platform to manage.

You can also configure P2P function by selecting **Main Menu > Network > P2P**.

 \square

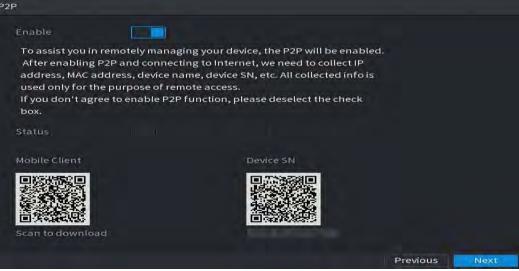

Make sure the DVR is connected into the Internet, and if yes, in the **Status** box of the P2P page, it shows **Online**.

<u>Step 1</u> After you have configured the network settings, on the **Network** page, click **Next**.

Figure 5-22 P2P

\square

After the P2P function is enabled and connected to the Internet, the system will collect your information for remote access, and the information includes but not limited to email address, MAC address, and device serial number.

You can start adding the device.

- Cell Phone Client: Use your mobile phone to scan the QR code to add the device into the Cell Phone Client, and then you can start accessing the Device.
- Platform: Obtain the Device SN by scanning the QR code. Go to the P2P management platform and add the Device SN into the platform. Then you can access and manage the device in the WAN. For details, refer to the P2P operation manual.

 \square

• You can also enter the QR code of Cell Phone Client and Device SN by clicking 🔤 or

the top right of the pages after you have entered the Main Menu.

• If selection of this function is canceled, the **Note** page is displayed. Choose to enable it or not according to your actual need.

Figure 5-23 Note

To use this function, take adding device into Cell Phone Client as an example.

Adding Device into Cell Phone Client

<u>Step 1</u> Use your cell phone to scan the QR code under Cell Phone Client to download the application.

<u>Step 2</u> On your cell phone, open the application, and then tap

The menu is displayed. You can start adding the device.

1) Tap Device Manager.

Figure 5-24 Device manager

2) Tap on the top right corner.

The page requiring device initialization is displayed. A pop-up message reminding you to make sure the Device is initialized is displayed.

- 3) Tap **OK**.
 - ◇ If the Device has not been initialized, Tap **Device Initialization** to perform initializing by following the onscreen instructions.
 - \diamond If the Device has been initialized, you can start adding it directly.
- 4) Tap **Add Device**.

\square

You can add wireless device or wired device. The Manual takes adding wired device as an example.

- 6) Enter a name for the DVR, the username and password, scan the QR code under **Device SN**.
- 7) Tap Start Live Preview.

The Device is added and displayed on the live view page of the cell phone.

5.1.4.6 Configuring Encode Settings

You can configure the settings of main stream and sub stream for the Device.

You can also configure encode settings by selecting Main Menu > CAMERA > Encode > Audio/Video. <u>Step 1</u> After you have configured the P2P settings, on the Audio/Video page, click Next.

CAMERA		8 🛋 🌣	• 🛡	20	LIVE	2 12- 司
Image	Audio/Video Sn	apshot Encodi	e Enhanc.			
Encode	Channel					
Overlay	Main Stream			Sub Stream

		More			More	
	Default	Copy to			Apply	Cancel

Figure 5-28 Encode

<u>Step 2</u> Configure the settings for the main/sub streams parameters.

https://tm.by Интернет-магазин

Table 5-5 Parameter description

Parameter	Description
	In the Channel list, select the channel that you want to configure the settings
Channel	for.
Crear and Carda a	Enable the smart codec function. This function can reduce the video bit
Smart Codec	stream for non-important recorded video to maximize the storage space.
	• Main Stream: In the Type list, select General, MD (Motion Detect), or
Туре	Alarm.
	Sub Stream: This setting is not configurable.
	In the Compression list, select the encode mode.
	• H.265: Main profile encoding. This setting is recommended.
Compression	• H.264H: High profile encoding. Low bit stream with high definition.
Compression	H.264: Main profile encoding.
	• H.264B: Baseline profile encoding. This setting requires higher bit stream
	compared with other settings for the same definition.
	In the Resolution list, select resolution for the video.
Resolution	The maximum video resolution might be different dependent on your device
	model.
	Configure the frames per second for the video. The higher the value is, the
	clearer and smoother the image will become. Frame rate changes along with
Frame Date (EDC)	the resolution.
Frame Rate (FPS)	Generally, in PAL format, you can select the value from 1 through 25; in NTSC
	format, you can select the value from 1 through 30. However, the actual range
	of frame rate that you can select depends on the capability of the Device.
	In the Bit Rate Type list, select CBR (Constant Bit Rate) or VBR (Variable Bit
Bit Rate Type	Rate). If you select CBR , the image quality cannot be configured; if you select
	VBR, the image quality can be configured.
Quality	This function is available if you select VBR in the Bit Rate List.
Quality	The bigger the value is, the better the image will become.
l Frame Interval	The interval between two reference frames.
Bit Rate (Kb/S)	In the Bit Rate list, select a value or enter a customized value to change the
	image quality. The bigger the value is, the better the image will become.
Video	Enable the function for sub stream.
	Click More , the More page is displayed.
Audio	• Audio: This function is enabled by default for main stream. You need to
	manually enable it for sub stream 1. Once this function is enabled, the
	recorded video file is composite audio and video stream.
	• Audio Source: In the Audio Source list, you can select Local and HDCVI .
Audio Source	Local: The audio signal is input from Audio In port.
	HDCVI: The audio signal is input from HDCVI camera.
Compression	• Compression: In the Compression list, select a format that you need.
compression	

5.1.4.7 Configuring Snapshot Settings

You can configure the basic snapshot settings such as quantity of snapshot each time, channel(s) to take snapshot, and image size and quality of snapshot.

You can also configure general settings by selecting **Main Menu > CAMERA > Encode > Snapshot**.

For more information about snapshot settings, see "5.8 Configuring Snapshot Settings."

<u>Step 1</u> After you have configured the encode settings, on the **Encode** page, click **Next**.

Snapshot	5	·		
Manual Snapshot	1	/Time		
Channel	1			
Туре	Scheduled			
Size	352x288(CIF)			
Quality	4			
Interval	1 sec.			
Default Copy	/ to		Previous	Next

Figure 5-29 Snapshot

<u>Step 2</u> Configure the settings for the snapshot parameters.

Table 5-6	Snapshot parameters
-----------	---------------------

Parameter	Description						
Manual Snapshot	In the Manual Snapshot list, select how many snapshots you want to take						
Mariual Shapshot	each time.						
Channel	In the Channel list, select the channel that you want to configure the settings						
Channel	for.						
	In the Mode list, you can select Human Face , Event , or General as the event						
	type for which you want to take a snapshot.						
	• Scheduled: The snapshot is taken during the scheduled period.						
Туре	• Event : The snapshot is taken when there is an alarm event occurs, such						
	as motion detection event, video loss, and local alarms.						
	• Face Snapshot: The snapshot is taken when the face is detected. The						
	face detection function is support only with the Channel 1.						
Size	In the Size list, select a value for the image. The bigger the value is, the better						
JIZE	the image will become.						
Quality	Configure the image quality by 6 levels. The higher the level is, the better the						
Quality	image will become.						
Interval	Configure or customize the snapshot frequency.						

5.1.4.8 Configuring Basic Storage Settings

You can configure the settings for the situations when HDD is full, file length and time length of recorded video, and the settings if to auto-delete the old files.

You can also configure basic storage settings by selecting **Main Menu > STORAGE > Basic**. <u>Step 1</u> After you have configured the encode settings, on the **Snapshot** page, click **Next**.

Figure 5-30 Basic

Basic				
Disk Full	Overwrite			
Create Video Files	Time Length	- 60	min.	
Delete Expired Files	Never			
			Previous	Next

<u>Step 2</u> Configure the basic storage settings parameters.

Table 5-7 Basic storage settings

Parameter	Description					
Disk Full	 Configure the settings for the situation when all the read/write discs are full, and there are no more free discs. Select Stop to stop recording Select Overwrite to overwrite the recorded video files always from the earliest time. The locked recorded video files will not be overwritten. 					
Create Video Files	Configure the time length and file length for each recorded video.					
Delete Expired Files	Configure whether to delete the old files and if yes, in the Delete Expired Files list, select Custom to configure the time length for how long you want to keep the old files.					

5.1.4.9 Configuring Recorded Video Storage Schedule

You can configure the schedule for the recorded video such as channels to record, alarm settings, and the armed period.

You can also configure recorded video storage settings by selecting **Main Menu > STORAGE >** Schedule > Record.

<u>Step 1</u> After you have configured the basic storage settings, on the **Basic** page, click **Next**.

Figure 5-31 Record

Channel	Al		Pr	e-Rec	ord	4	er.								
		Gener		Mc			Alarn		п м			in in	itelli		POS
	о	2	4	6	8	10	12	14	16	18	20	22	24

🗆 Wed	-												-		٠
🗆 Thu										_					
🗆 Fri															-
🗆 Sat							1				1		-		-
Default	6	py to										Previo		-	Next

Parameter	Description										
Channel	In the Channel list, select a channel to record the video.										
Pre-record	In the Pre-record list, enter the amount of time that you want to start the recording in advance.										
Redundancy	 If there are several HDDs installed to the Device, you can set one of the HDDs as the redundant HDD to save the recorded files into different HDDs. In case one of the HDDs is damaged, you can find the backup in the other HDD. Select Main Menu > STORAGE > Disk Manager, and then set a HDD as redundant HDD. Select Main Menu > STORAGE > Schedule > Record, and then select the Redundancy checkbox. If the selected channel is not recording, the redundancy function takes effect next time you record no matter you select the checkbox or not. If the selected channel is recording, the current recorded files will be packed, and then start recording according to the new schedule. Not all models support this function. The redundant HDD only back up the recorded videos but not snapshots. 										
Event type Select the checkbox of the event type which includes General, Motion (motion detect, video loss, tempering, diagnosis), Alarm (IoT alarms, local alarms, alarms, alarms from alarm box, IPC external alarms, IPC Offline alarms), M& Intelligent (IVS events, face detection), and POS.											
Period	Define a period during which the configured recording setting is active.										
Сору	Click Copy to to copy the settings to other channels.										

<u>Step 2</u> Configure the record settings parameters.

<u>Step 3</u> Define the video recording period by drawing or editing. By default, it is active all the time.

• Define the period by drawing.

1) Select the checkbox of event type.

Figure 5-32 Event type

- 2) Define a period. The system supports maximum six periods.
 - Define for the whole week: Click next to All, all the icon switches to , you can define the period for all the days simultaneously.
 - \diamond Define for several days of a week: Click \square before each day one by one, the icon

switches to 🖾. You can define the period for the selected days simultaneously.

3) On the timeline, drag to define a period. The Device starts recoding the selected event type in the defined period.

The color bar indicates the event type that is effective in a defined period:

- Recording priority in case of event types are overlapped: M&A > Alarm > Intelligent > Motion > General.
- Select the checkbox of event type, and then click so clear the defined period.
- When selecting MD&Alarm, the MD and Alarm checkboxes will be cleared respectively.
- Define the period by editing. Take Sunday as an example.
- 4) Click 🗰.

Figure 5-34 Period

- 5) Enter the time frame for the period and select the event checkbox.
 - \diamond $\;$ There are six periods for you to set for each day.
 - ◇ Under Copy to, select All to apply the settings to all the days of a week, or select specific day(s) that you want to apply the settings to.
- 6) Click **OK** to save the settings.
- <u>Step 4</u> Click **OK** to complete the settings.

 \square

- Click Copy to copy the settings to other channels.
- After configuring the recording schedule settings, you need to perform the following operations to start recording according to the defined schedule.
 - Enable the alarm event and cofigure the settings for the recording channel. For details, see "5.10 Alarm Events Settings."
 - ♦ You need to enable the recording function, see "5.9.1 Enabling Record Control."

5.1.4.10 Configuring Snapshot Storage Schedule

You can configure the storage schedule for the snapshot such as channels to take snapshot, alarm settings, and the armed period.

You can also configure snapshot storage settings by selecting **Main Menu > STORAGE > Schedule > Snapshot**.

<u>Step 1</u> After you have configured the video recording settings, on the **Record** page, click **Next**.

Figure 5-35 Snapshot

Snapshot

<u>Step 2</u> Configure the snapshot settings parameters.

Parameter	Description
Channel	In the Channel list, select a channel to take a snapshot.
Event tune	Select the checkbox of the event type which includes General, Motion,
Event type	Alarm, M&A, Intelligent, and POS.
	Define a period during which the configured snapshot setting is active. For
Period	details about defining a period, see "5.1.4.9 Configuring Recorded Video
	Storage Schedule."
Сору	Click Copy to copy the settings to other channels.

- Step 3 Click OK.
- Step 4 Click OK.

The live view screen is displayed. The setting up with startup wizard is completed. You can start using the Device.

<u>Step 5</u> (Optional) After the setting with startup wizard is completed, if the connected HDMI display resolution is inconsistent with default resolution (1280*1024), a dialog box will pop up. Choose to switch the resolution or not.

Figure 5-36 Change resolution

5.2 Live View

After you logged in the Device, the live view is displayed. The number of channels displayed depends on your model.

To enter the live view screen from other pages, click **used** on the top right of the screen.

Figure 5-37 Live view

5.2.1 Live View Screen

You can view the live video from the connected cameras through each channel on the screen.

- By default, the system time, channel name and channel number are displayed on each channel • window. This setting can be configured by selecting Main Menu > CAMERA > Overlay > Overlay.
- The figure in the bottom right corner represents channel number. If the channel position is changed or the channel name is modified, you can recognize the channel number by this figure and then perform the operations such as record query and playback.

lcon	Function
	Indicates recording status. This icon displays when the video is being recorded.
*	This icon displays when the motion detection occurs in the scene.
?	This icon displays when the video loss is detected.
6	This icon displays when the channel monitoring is locked.

Table 5-8 Live view description

<u>_~r</u>

To switch the position of two channels, point to one of the two channels, and then drag the window to the other channel.

5.2.2 Live View Control bar

The live view control bar provides you access to perform the operations such as playback, zoom, realtime backup, manual snapshot, voice talk, adding remote devices, and streams switch.

When you move the pointer to the top middle position of a channel window, the live view control bar is displayed.

If there is not operation for six seconds after the control bar is displayed, the control bar hides automatically.

3	Instant Record	6	Audio Talk	/	/

5.2.2.1 Instant Playback

You can play back the previous five minutes to sixty minutes of the recorded video.

By clicking **1**, the instant playback page is displayed. The instant playback has the following

features:

- Move the slider to choose the time you want to start playing.
- Play, pause and close playback.
- The information such as channel name and recording status icon are shielded during instant playback and will not display until exited.
- During playback, screen split layout switch is not allowed.
- To change the playback time, select **Main Menu > SYSTEM > General > Basic**, in the **Instant Play** box, enter the time you want to play back.

Figure 5-41 General

5.2.2.2 Digital Zoom

You can enlarge a specific area of the image to view the details by either of the following two ways.

• Click 💽, the icon switches to 🗹. Hold down the left mouse button to select the area you

want to enlarge. The area is enlarged after the left mouse button is released.

• Point to the center that you want to enlarge, rotate the wheel button to enlarge the area.

- For some models, when the image is enlarged in the first way described previously, the selected area is zoomed proportionally according to the window.
- When the image is in the enlarged status, you can drag the image toward any direction to view the other enlarged areas.
- Right-click on the enlarged image to return the original status.

5.2.2.3 Instant Record

You can record the video of any channel and save the clip into a USB storage device.

By clicking 1, the recording is started. To stop recording, click this icon again. The clip is automatically saved into the connected USB storage device.

5.2.2.4 Manual Snapshot

You can take one to five snapshots of the video and save into a USB storage device.

By clicking 🛄, you can take snapshots. The snapshots are automatically saved into the connected

USB storage device. You can view the snapshots on your PC.

To change the quantity of snapshots, select **Main Menu > CAMERA > ENCODE > Snapshot**, in the Manual Snap list, select the snapshot quantity.

5.2.2.5 Mute (Analog channel only)

You can mute the video sound by clicking I. This function is supported in single-channel view.

5.2.2.6 White Light (Supported on Camera with White Light Function)

Click I to manually control the camera to turn on the white light function.

5.2.2.7 Siren (Supported on Camera with Siren Function)

to manually control the camera to generate alarm sound. Click

5.2.2.8 Two-way Talk (Digital channel Only)

You can perform the voice interaction between the Device and the remote device to improve efficiency of emergency. This function is supported only when the remotely connected IPC device supports bidirectional talk.

- , the icon switches to 🖳 the bidirectional talk of the remote device is turned on. The Click bidirectional talk of other digital channels is disabled.
- to cancel the bidirectional talk. The bidirectional talk of other digital channels is Click resumed.

5.2.2.9 Adding Camera (Digital channel Only)

You can view the information of remote devices and add new remote devices to replace the current connected devices.

By clicking **Section**, the **Camera List** page is displayed. For details about adding the remote devices, see "5.6 Configuring Remote Devices."

5.2.3 Navigation Bar

You can access the functions to perform operations through the function icons on the navigation bar. For example, you can access Main Menu and switch window split mode.

The navigation bar is disabled by default. It does not appear in the live view screen until it is enabled. To enable it, select **Main Menu > SYSTEM > General > Basic**, enable the Navigation Bar, and then click **Apply**.

lcon	Function
Â	Open Main Menu.

5.2.6 Channel Sequence

You can adjust the channel sequence displayed on live page on actual needs.

\wedge

The live view page displays the default channel sequence after restoring factory defaults. <u>Step 1</u> Right-click on the live view page and select **Sequence**.

 \square

- The system displays the maximum number of window splits supported by the DVR after **selecting** Sequence.
- The Sequence page displays only the channel name and channel number of added

remote devices. 🞴 represents the remote device is online, and 🞴 represents the remote device is offline.

Figure 5-46 Sequence

Sequence					
• A1	29				
• A2	Channel2				
• A3	Channel3				
• A4	Channel4				
• A5	Channel5				
• A6	Channel6				
• A7	Channel7				
A	oply	Cancel			

<u>Step 2</u> Adjust channel sequence.

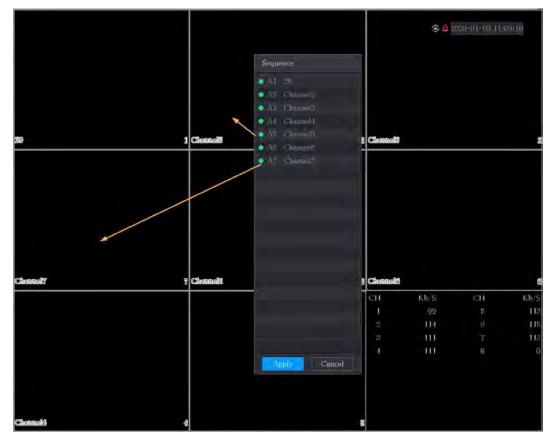

- Drag a channel to the target window split.
- Drag a window split to another to change the sequence.

You can view the channel sequence according to the channel number on the lower-right corner of the window split.

Figure 5-47 Adjusted sequence

5.2.7 Color Setting

You can adjust the video image color effect such as sharpness, brightness, and contrast. The parameters are different according to the connected camera type. Take analog channel as an example.

Parameters displayed on the page vary from different cameras.

In the live view screen, right-click on the analog channel to see the shortcut menu, and then select **Image**, the **Image** page is displayed.

For details, see "5.5.1 Configuring Image Settings."

Figure 5-48 Image

Image			
Period	Period 1		
Effective Time	00 : 00	- 24 :00	
Saturation	•	+	50
Brightness	0	+	50
Contrast	•	+	50
Hue	•	+	50
Sharpness	0	+	
Color Mode	Standard		
Position	0	+	16
Custom	Default	Apply	Back

Table 5-11 Image settings

Parameter	Description
Period	Divide 24 hours into two periods and configure the corresponding color
Penou	settings.
Effective Time	Enable the function and then set the effective time for each period.
	Adjust the sharpness of image edge. The bigger the value is, the more
Sharpness	obvious the image edge, and the noise is also greater.
	The value ranges from 1 to 15. The default value is 1.
Hue	Adjust the hue of image. The value ranges from 0 to 100. The default
пие	value is 50.
	Adjust the image brightness. The value ranges from 0 to 100. The default
	value is 50.
Brightness	The bigger the value is, the brighter the image will become. You can
blightness	adjust this value when the image as a whole looks dark or bright.
	However, the image is likely to become dim if the value is too big.
	The recommended range is between 40 and 60.

Parameter	Description			
Contrast	Adjust the image contrast. The bigger the value is, the more obvious the contrast between the light area and dark area will become. You can adjust this value when the contrast is not obvious. However, if the value is too big, the dark area is likely to become darker and the light area ove exposed. If the value is too small, the image is likely to become dim. The value ranges from 0 to 100. The default value is 50. The recommended range is between 40 and 60.			
Saturation	Adjust the color shades. The bigger the value, the lighter the color will become. This value does not influence the general image lightness. The value ranges from 0 to 100. The default value is 50. The recommended range is between 40 and 60.			
Color Mode	In the Color Mode list, you can select Standard, Soft, Bright, Vivid, Bank, Customized 1, Customized 2, Customized 3, and Customized 4. The sharpness, hue, brightness, contrast and saturation will adjust automatically according to the selected color mode.			
EQ	 Enhance the image effect. Adjust the effect value. Click , image is adjusted to the optimized effect automatically. Click , the current effect setting will be locked. Only HD analog channel supports this function. 			
Position	Adjust the display position of the image in the channel window. The value indicates pixel. The default value is 16.			
Custom	 You can customize four color modes. 1. Click Custom. The Custom Color page is displayed. 2. In the Color Mode list, select Custom 1, for example. Then configure the settings for sharpness, hue, brightness, contrast and saturation. If you select All, the configuration will apply to all four customized color modes. 3. Click OK. 4. On the Image page, in the Color Mode list, you can select the customized color mode. 			

5.2.8 Live View Display

5.2.8.1 Configuring Display Settings

You can configure the display effect such as displaying time title and channel title, adjusting image transparency, and selecting the resolution.

```
<u>Step 1</u> Select Main Menu > DISPLAY > Display.
```

Figure 5-49 Display

Main Screen		Sub Screen		
Output Port	VGA/HDMI			
	Time Title	Output Port		
	Channel Title			
	Original Ratio	Show Message

		view screen. To hide the time, clear the checkbox.			
		Select the Original Ratio checkbox, the video image displays in its			
	Original Ratio	actual size in the channel window.			

Parameter		Description				
	Al Rule	Select the AI Rule checkbox to enable AI rule showing function. It is enabled by default.				
	SMD Preview	Display the SMD rule box while preview. It is disabled by default.				
	Live Audio	Select the Live Audio checkbox to enable the audio adjustment function in the channel window on the live view screen.				
	Volume	Move the slider to adjust the volume of live audio.				
	Transparency	Configure the transparency of the graphical user interface (GUI). The higher the value, the more transparent the GUI becomes.				
	Resolution	Select resolution for the video. The default resolution for VGA port and HDMI port is 1280×1024. Some of the resolution options might not be supported on the HDMI port.				
	Live Mode	 General: No information is displayed on the channel window. Al Mode: Displays the detected face snapshots. Not all models support this function. 				
	Enable	Enable extra screen function. After this function is enabled, you can select which port as extra screen port, and the other port automatically becomes the main screen port.				
Sub	Output Port	Select the VGA port or HDMI port as the port connected by a secondary monitor. For example, if you select HDMI port as the extra screen port, the VGA port automatically becomes the main screen port.				
Screen	Resolution	Select resolution for the video. The default resolution for VGA port and HDMI port is 1280 × 720.				
		Some of the resolution options might not be supported on the HDMI port.				
	Show Message	After it is enabled, the sub screen will display alarm message when an alarm is triggered.				
• The	main menu does no	ot display on the extra screen.				
	u do not enable the e image.	e extra screen function, both the VGA port and HDMI port display the				

5.2.8.2 Configuring Zero-Channel Settings

You can view several video sources on one channel on the web end.

<u>Step 1</u> Select Main Menu > DISPLAY > Zero-Channel.

Figure 5-50 Zero-channel

Enable			
	H.264H		
	704x576(D1)		
	25		
Bit Rate(Kb/S)	1024		
		Apply	Back

<u>Step 2</u> Configure the settings for the zero-channel parameters.

Table 5-13 Zero-channel parameters				
Parameter	Description			
Enable	Enable zero-channel function.			
Compression	In the Compression list, select the video compression standard according to			
compression	the device capability. The default is H.265.			
Resolution	In the Resolution list, select the video resolution. The default is 704×576			
Resolution	(D1).			
	Select a value between 1 and 25 for PAL standard, and between 1 and 30 for			
Frame Rate (FPS)	NTSC standard. The actual arrange is decided and selected dependent on			
	the Device capability.			
Bit Rate (Kb/S)	The default value is 1024Kb/S. The actual arrange is decided and selected			
Dit nate (ND/3)	dependent on the Device capability and frame rate.			

<u>Step 3</u> Click **Apply** to save the settings.

In the live page on the web, click $\square \square \square$ to select one of the multichannel modes, and then you can view the local video image.

5.2.8.3 Configuring TV

 \square

Not all models support this function.

You can adjust the border margins in top, bottom, left and right directions as well as the brightness of the monitor connected to the Video out port of the Device. <u>Step 1</u> Select Main Menu > DISPLAY > TV Adjust.

Figure 5-51 TV adjust

Top Margin	-0	+ 0
Bottom Margin	- 0	+ 0
Left Margin	-0	+ 0
Right Margin	- 0	+ 0
Brightness	0	+ 128

- <u>Step 2</u> Configure the parameters according to your actual situation.
- <u>Step 3</u> Click **Apply** to complete the settings.

5.2.9 Configuring Tour Settings

You can configure a tour of selected channels to repeat playing videos. The videos display in turn according to the channel group configured in tour settings. The system displays one channel group for a certain period and then automatically changes to the next channel group.

7		 Displays Cell Phone Client and Device SN QR Code. Cell Phone Client: Use your mobile phone to scan the QR code to add the device into the Cell Phone Client, and then you can start accessing the Device from your cell phone. Device SN: Obtain the Device SN by scanning the QR code. Go to the P2P management platform and add the Device SN into the platform. Then you can access and manage the device in the WAN. For details, refer to the P2P operation manual. You can also configure P2P function in the local configurations. See "5.1.4.5 Configuring P2P Settings." 			

5.4 Controlling PTZ Cameras

PTZ is a mechanical platform that carries a camera and a protective cover and performs overall control remotely. A PTZ can move in both horizontal and vertical direction to provide all-around view to the camera.

Before operating PTZ, ensure the network connection between PTZ and the Device.

5.4.1 Configuring PTZ Connection Settings

You need to configure the PTZ connection settings before use.

- Local connection: RS-485 Port for connecting speed dome or coaxial cable for connecting coaxial camera.
- Remote connection: local area network.

<u>Step 1</u> Select Main Menu > CAMERA > PTZ.

Table 5-17 PTZ connection parameters

Parameter	Description		
Channel In the Channel list, select the channel that you want to connect			
Channel	camera to.		
Туре	Local: Connect through RS-485 port or coaxial cable.		

Parameter	Description		
	Remote: Connect through network by adding IP address of PTZ camera		
	to the Device.		
	In the Control Mode list, select Serial Port or HDCVI. For HDCVI series		
	product, select HDCVI . The control signal is sent to the PTZ through the coaxial		
Control Mode	cable. For the serial mode, the control signal is sent to the PTZ through the RS-		
	485 port.		
Drata cal	In the Protocol list, select the protocol for the PTZ camera. For example, select		
Protocol	HDCVI3.0.		
	In the Address box, enter the address for PTZ camera. The default is 1.		
Adduces			
Address	The entered address must be the same with the address configured on the		
	PTZ camera; otherwise the PTZ camera cannot be controlled from the Device.		
Devid Date	In the Baud Rate list, select the baud rate for the PTZ camera. The default is		
Baud Rate	9600.		
Data Bits	The default value is 8.		
Stop Bits	The default value is 1.		
Parity	The default value is NONE.		

<u>Step 3</u> Click **Apply** to save the settings.

Click **Copy** to copy the settings to other channels.

5.4.2 Working with PTZ Control Panel

PTZ control panel performs the operations such as directing camera in eight directions, adjusting zoom, focus and iris settings, and quick positioning.

Basic PTZ Control Panel

Right-click on the live view screen and then select PTZ. The PTZ control panel is displayed.

Figure 5-62 PTZ control panel

The functions with buttons in gray are not supported by the system.

Table 5-18 PTZ control panel description

Parameter	Description
Speed	Controls the movement speed. The bigger the value is, the faster the
Speed	movement will be.
Zoom	Zoom out.
	Zoom in.
Focus	
	Focus near.
Iris	E: Image darker.
-	: Image brighter.
PTZ movement	Supports eight directions.
[ā	 Fast positioning button. Positioning: Click anywhere on the live view screen, the PTZ will turn to this point and move it to the middle of the screen. Zooming: On the fast positioning screen, drag to draw a square on the view. The square supports zooming. Dragging upward is to zoom out, and dragging downward is to zoom in. The smaller the square, the larger the zoom effect. Not all models support this function and can only be controlled through mouse operations.
•	Click , you can control the four directions (left, right, up, and down) PTZ movement through mouse operation.
	Click to open the expanded PTZ control panel.

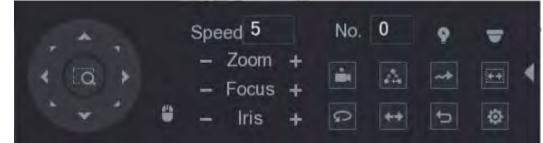

Expanded PTZ Control Panel

On the basic PTZ control panel, click to open the expanded PTZ control panel to find more options.

Figure 5-63 Expanded PTZ control panel

- The functions with buttons in gray are not supported by the system.
- Right-click once to return to the page of PTZ basic control panel.

Preset	Tour	Pattern	Scan
*		Pres	set 1 Setting lete Preset

- <u>Step 2</u> Click the direction arrows to the required position.
- <u>Step 3</u> In the **Preset** box, enter the value to represent the required position.
- <u>Step 4</u> Click **Setting** to complete the preset settings.

5.4.3.2 Configuring Tours

- Step 1 On the Expanded PTZ Control Panel, click
- <u>Step 2</u> Click the **Tour** tab.

Figure 5-00 Tour				
PTZ				
Preset	Tour	Pattern	Scan	
₹ ↓			eset 1 ur No. 0 Add Preset Delete Preset Delete Tour	

Figure 5-66 Tour

- <u>Step 3</u> In the **Tour No**. box, enter the value for the tour route.
- <u>Step 4</u> In the **Preset** box, enter the preset value.
- Step 5 Click Add Preset.

A preset will be added for this tour.

- You can repeat adding more presets.
- Click **Delete Preset** to delete the preset for this tour. This operation can be repeated to delete more presets. Some protocols do not support deleting.

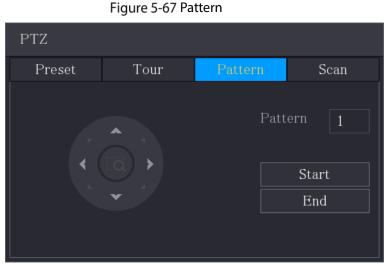

5.4.3.3 Configuring Patterns

Step 1 On the Expanded PTZ Control Panel, click

<u>Step 2</u> Click the Pattern tab.

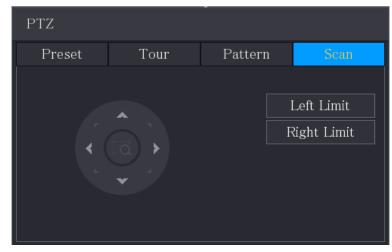

- In the **Pattern** box, enter the value for pattern. <u>Step 3</u>
- Step 4 Click Start to perform the directions operations. You can also go to the PTZ Control Panel to perform the operations of adjusting zoom, focus, iris, and directions.
- <u>Step 5</u> On the PTZ page, click End to complete the settings.

5.4.3.4 Configuring Scan

- ۲ Step 1 On the Expanded PTZ Control Panel, click
- Step 2 Click the Scan tab.

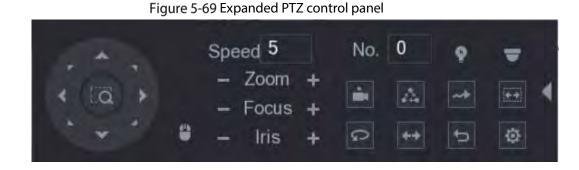

Step 3 Click the direction arrows to position the left and right limits.

5.4.4 Calling PTZ Functions

After you have configured the PTZ settings, you can call the PTZ functions for monitoring from the Expanded PTZ Control Panel.

5.4.4.1 Calling Presets

- <u>Step 1</u> On the expanded PTZ Control Panel, in the **No.** box, enter the value of the preset that you want to call.
- Step 2 Click is to call the preset.

<u>Step 3</u> Click again to stop calling the preset.

5.4.4.2 Calling Tours

- <u>Step 1</u> On the Expanded PTZ Control Panel, in the **No.** box, enter the value of the tour that you want to call.
- Step 2 Click I to call the tour.
- <u>Step 3</u> Click again to stop calling the tour.

5.4.4.3 Calling Patterns

- <u>Step 1</u> On the Expanded PTZ Control Panel, in the **No.** box, enter the value of the pattern that you want to call.
- <u>Step 2</u> Call **I** to call the pattern.

The PTZ camera moves according to the configured pattern repeatedly.

<u>Step 3</u> Click again to stop calling the pattern.

5.4.4.4 Calling AutoScan

- <u>Step 1</u> On the Expanded PTZ Control Panel, in the **No.** box, enter the value of the border that you want to call.
- Step 2 Click

The PTZ camera performs scanning according to the configured borders.

<u>Step 3</u> Click again to stop auto scanning.

5.4.4.5 Calling AutoPan

<u>Step 1</u> On the Expanded PTZ Control Panel, click 2 to start moving in horizontal direction.

Step 2 Click again to stop moving.

5.4.4.6 Using AUX Button

On the Expanded PTZ Control Panel, click **Panel**, the AUX setting page is displayed.

- In the **Shortcut Aux** list, select the option that corresponds to the applied protocol.
- In the Aux No. box, enter the number that corresponds to the AUX switch on the decoder.

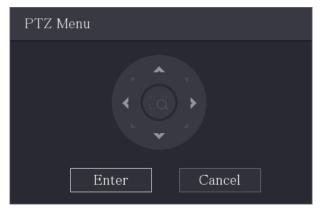

5.4.5 Calling OSD Menu

For the coaxial camera, you can call the OSD menu through the Expanded PTZ Control Panel.

Step 1 On the Expanded PTZ Control Panel, click

Figure 5-71 PTZ menu

Step 2 Click Enter.

Step 3On the PTZ Menu page, click the arrow button to select the onscreen parameters.Step 4Click Enter to complete the settings.

5.5 Configuring Camera Settings

5.5.1 Configuring Image Settings

You can configure the image settings such as saturation, contrast, brightness, sharpness for each connected camera.

<u>Step 1</u> Select Main Menu > CAMERA > Image.

Figure 5-73 Analog channel

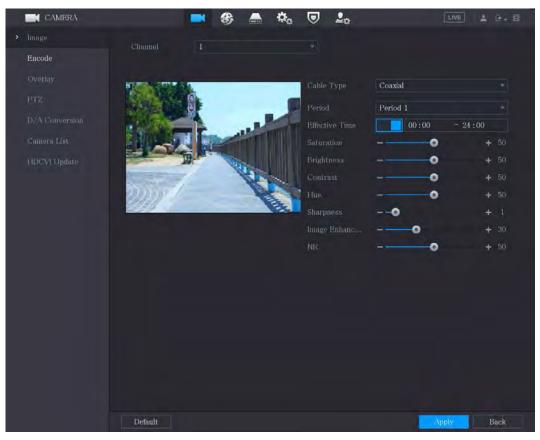

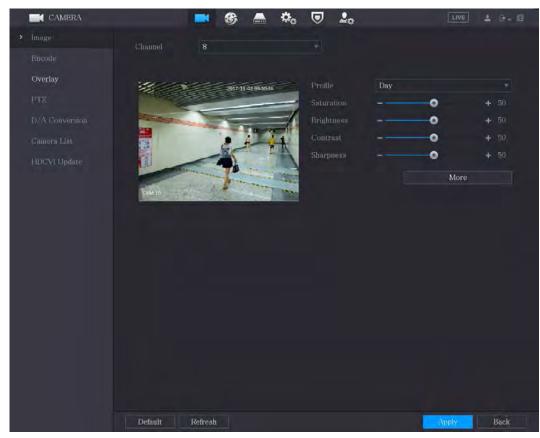

Figure 5-74 Digital channel

<u>Step 2</u> Configure the settings for the image parameters.

On the digital channel page, click **More** to display more parameters.

Parameter	Description
Channel	In the Channel list, select the channel that you want to configure.
Cable Type	In the Cable Type list, select the cable type that the camera uses.
	Not all models support this function.
Period	In the Period list, select a time period for the image settings. The image settings will be only used during the selected period.
	Enable the effective function.
Effective Time	In the Effective Time box, enter the start time and end time for the period you selected.
Saturation	Adjusts the color shades. The bigger the value, the lighter the color will become. This value does not influence the general image lightness. The value ranges from 0 to 100. The default value is 50. The recommended range is between 40 and 60.
Contrast	Adjusts the image contrast. The bigger the value is, the more obvious the contrast between the light area and dark area will become. You can adjust this value when the contrast is not obvious. However, if the value is too big, the dark area is likely to become darker and the light area over exposed. If the value is too small, the image is likely to become dim. The value ranges from 0 to 100. The default value is 50. The recommended range is between 40 and 60.
Brightness	Adjusts the image brightness. The bigger the value is, the brighter the image will become. You can adjust this value when the image as a whole looks dark or bright. However, the image is likely to become dim if the value is too big. The value ranges from 0 to 100. The default value is 50. The recommended range is between 40 and 60.
Hue	Adjusts the hue of image. The value ranges from 0 to 100. The default value is 50.
Sharpness	Adjusts the sharpness of image edge. The bigger the value is, the more obvious the image edge, and the noise is also greater. The value ranges from 1 to 15. The default value is 1.
Image Enhance	Adjusts the image definition. The bigger the value is, the clearer the image will become, but there will be more noises.
NR	Reduces the noises from image. The bigger the value is, the better the image will become.

Table 5-19 Image parameters

Parameter	Description		
	In the Config File list, select Day , Night , Normal , or Switch By Period . The		
	system configures the parameters correspondingly.		
Config File	Day: Apply the configuration during daytime.		
	Night: Apply the configuration during nighttime.		
	Normal: Apply the configuration during day and night.		
	• Switch by Period: If you select this option, you need to configure the		
	sunrise time and sunset time where you are located.		
Mirror	Enable the function, the left and right side of the video image will be		
Mirror	switched. It is disabled by default.		
	This function specially applies to the image which frame rate is configured		
3D Denoise	as 2 at least. It reduces the noises by making use of the information		
	between two frames. The bigger the value is, the better the effect.		
Flim	In the Flip list, you can select 180° to change the video image display.		
Flip	By default, the setting is No Flip .		
Light	In the Light list, select Close or Enable to use the backlight compensation		
Light	or not.		
	Configure the white balance to adjust the general hue of the image. The		
	default setting is Auto .		
	Auto: Automatically apply white balance to different colors to make the		
Scene Mode	image color display normally.		
	• Sunny: Apply the threshold value to sunny environment.		
	Night: Apply the threshold value to night.		
	• Customized: Manually adjust the Red Gain and Blue Gain values.		
	Configure the color and black&white mode of the image. This setting is not		
	affected by the configuration files. The default setting is Auto .		
	Color: The camera outputs color image only.		
Day & Night	• Auto: Depends on the camera, such as overall brightness and whether		
Day & Night	there is an IR light, either color image or black&white image is output.		
	B/W: The camera outputs Black and white image only.		
	• By Time: The camera outputs image according to the configured sunrise		
	time and sunset time.		

<u>Step 3</u> Click **Apply** to complete the settings.

5.5.2 Configuring Encode Settings

<u>Step 1</u> Select Main Menu > CAMERA > Encode > Audio/Video.

Figure 5-75 Audio/video

	CAMERA		🍪 🚔 🍫 🛡	20	LIVE 1 6- 3
	Image	Audio/Video Sn	apshot		
*	Encode	Channel	1 *		
	Overlay	Main Stream		Sub Stream	
	PTZ	Coding Strategy	General	Video	
	Channel Type	Туре	General	Stream Type	Sub Stream1
	Camera List	Compression	H.265	Compression	H.265
	HDCVI Update	Resolution	1280x1440(4M-N) -	Resolution	352x288(CIF)
		Frame Rate(FPS)	15	Frame Rate(FPS)	15 *
		Bit Rate Type	CBR	Bit Rate Type	CBR
		Quality		Quality	1
		I Frame Interval	1sec.	Frame Interval	1sec.
		Bit Rate(Kb/S)	1024	Bit Rate(Kb/S)	320
			More		More
		Default	Copy to		Apply Cancel

<u>Step 2</u> Configure the settings for the main/sub streams parameters.

Table 5-20	Main/sub	stream	parameters
	111011, 500	Stream	parameters

Parameter	Description
Channel	In the Channel list, select the channel that you want to configure the
	settings for.
	General: Uses general coding strategy.
	• Smart Codec: Enables the smart codec function. This function can
	reduce the video bit stream for non-important recorded video to
Coding Strategy	maximize the storage space.
	• Al Codec: Enables the Al codec function. This function can reduce the
	video bit stream for non-important recorded video to maximize the
	storage space.
Type	• Main Stream: In the Type list, select General , Motion , or Alarm .
Туре	Sub Stream: This setting is not configurable.
	In the Compression list, select the encode mode.
	• H.265: Main profile encoding. This setting is recommended.
Compression	• H.264H: High profile encoding. Low bit stream with high definition.
Compression	H.264: General profile encoding.
	• H.264B: Baseline profile encoding. This setting requires higher bit stream
	compared with other settings for the same definition.
	In the Resolution list, select resolution for the video.
Resolution	The maximum video resolution might be different dependent on your device
	model.

Parameter	Description
	Configure the frames per second for the video. The higher the value, the
	clearer and smoother the image will become. Frame rate changes along
	with the resolution.
Frame Rate (FPS)	Generally, in PAL format, you can select the value from 1 through 25; in
	NTSC format, you can select the value from 1 through 30. However, the
	specific range of frame rate that you can select depends on the capability of
	the Device.
Quality	This function is available if you select VBR in the Bit Rate List.
Quality	The higher the value, the better the image will become.
l Frame Interval	The interval between two reference frames.
Dit Data (Kb /C)	In the Bit Rate list, select a value or enter a customized value to change the
Bit Rate (Kb/S)	image quality. The bigger the value is, the better the image will become.
Video	Enable the function for sub stream.
	Click More , the More page is displayed.
Audio	• Audio: This function is enabled by default for main stream. You need to
/ ddio	manually enable it for sub stream 1. Once this function is enabled, the
	recorded video file is composite audio and video stream.
	• Audio Source: In the Audio Source list, you can select LOCAL and
Audio Source	HDCVI.
	\diamond LOCAL: The audio signal is input from Audio input port.
	\diamond HDCVI: The audio signal is input from HDCVI camera.
Compression	• Audio Format: In the Compression list, select a format that you need.
Step 3 Click Apply to	complete the settings.

Click **Copy to** to copy the settings to other channels.

5.5.3 Configuring Snapshot Settings

<u>Step 1</u> Select Main Menu > CAMERA > Encode > Snapshot.

Figure 5-76 Snapshot

CAMERA		3 A A A A A A A A A A A A A A A A A A A	🛡 🚣	LIVE 🛓 🗄 -	a.

<u>Step 2</u> Configure the settings for the snapshot parameters.

Table 5-21 Snapshot parameters	Table 5-21	Snapshot	parameters
--------------------------------	------------	----------	------------

Parameter	Description
Manual Spanshot	In the Manual Snapshot list, select how many snapshots you want to take
Manual Snapshot	each time.
Channel	In the Channel list, select the channel that you want to configure the settings
Channel	for.
	In the Type list, you can select Scheduled, Event, or Face Snapshot as the
	event type for which you want to take a snapshot.
Туре	• Scheduled: The snapshot is taken during the scheduled period.
	• Event: The snapshot is taken when there is an alarm event occurs, such
	as motion detection event, video loss, and local alarms.
	• Face Snapshot: The snapshot is taken when the face is detected. The
	face detection function is support only with the Channel 1.
Size	In the Size list, select a value for the image. The bigger the value is, the better
5120	the image will become.
Quality	Configures the image quality by 6 levels. The higher the level, the better the
Quality	image will become.
	Configures or customizes the snapshot frequency. You can select 1 second
Interval	per one snapshot to 7 seconds per one snapshot. The maximum is 3600
	seconds per one snapshot.

<u>Step 3</u> Click **Apply** to complete the settings.

 \square

Click Copy to to copy the settings to other channels.

5.5.4 Configuring Encode Enhancement

You can enable this function and get more FPS in encode settings (see "5.5.2 Configuring Encode Settings"). In the meantime, you will not be able to use extra screen function (see "5.2.8.1 Configuring Display Settings") and AI functions (see "5.11 AI Function").

Select Main Menu > CAMERA > Encode > Encode Enhancement.

Figure 5-77 Encode enhancement

<u>Step 2</u> Configure the settings for the covered area parameters.

Parameter	Description				
Channel	In the Channel list, select the channel that you want to configure the				
Channel	settings for.				
	• Preview: Select the Live checkbox to apply the configured covered block				
Live	to the selected channel window in the live view screen.				
LIVE	• Record: Select the Record checkbox to apply the configured covered				
	block to the selected channel window during recording.				
	To configure covering block, do the following:				
	1. Select the Live checkbox or the Record checkbox, or select the				
	both. The "1, 2, 3, 4" buttons are activated.				
Record	2. Click the buttons to select blocks.				
	3. A triangle solid black block is displayed.				
	4. Drag the block to the area that you want to cover and adjust the				
	size of the block. You can configure total 4 covered blocks.				

<u>Step 3</u> Click **Apply** to complete the settings.

5.5.7 Configuring Channel Type

You can configure the channel type as **Analog** or **IP** channel. <u>Step 1</u> Select **Main Menu > CAMERA > Channel Type**.

Figure 5-81 Channel type

CAMERA			6 🚔	ی ک	20		LIVE	4 6-8

			nel can be con t from the last :			erit is disabled	, channel	
						er it is disabled	, Channei	
						er fi is disabled	, Channel	
						er it is disabled	, Channel	
							Apply	Back

<u>Step 2</u> Configure the channels.

- Analog Channel: Select the transmission medium such as CVI, AHD, CVBS, and then follow the onscreen instructions to complete the settings.
- IP Channel: You can enable the IP channels by disabling the corresponding analog channels. The Device also provides expanded IP channels for your use, such as the 17–64 channels in 0.

- The 17–64 channels are only for IP camera and the range changes dependent on the model you purchased.
- The channel selection for analog camera or IP camera are in sequence, for example, if you want to select channels for IP camera, you need to select from the last channel number Channel **16** first, which means, you cannot jump to select the channel **15** directly until you have selected the channel **16**.
- <u>Step 3</u> Click **Apply** and follow the onscreen instructions to complete the settings.

5.5.8 Upgrading Coaxial Camera

<u>Step 1</u> Select Main Menu > CAMERA > HDVCI Update.

Figure 5-82 Update

- Step 2 Click Browse.
- <u>Step 3</u> Select the upgrade file and then click **OK**.

You need to insert the USB storage device that contains the upgrading files.

- <u>Step 4</u> Select the checkbox of the channel that you want to upgrade.
- Step 5 Click Update.

If the upgrading is successful, the system pops up a message indicating the upgrading is completed.

5.6 Configuring Remote Devices

5.6.1 Adding Remote Devices

This function is available after you have configured the channel type as IP channel as described in previous section, see "5.5.7 Configuring Channel Type."

You can add remote devices by adding the IP address.

Select Main Menu > CAMERA > Camera List > Add Camera, the Add Camera page is displayed.

Figure 5-83 Add camera

STATIC		
IP Address	ALC: NO. 1 ALC:	Incremental Value 1
Subnet Mask	B B B B 1	
Default Gateway	[# # 1 1]	
1 IP Addres:		
Back		Next Skip

<u>Step 7</u> Configure the IP address.

- Select the **DHCP** checkbox, you do not need to enter the IP address information, because the system will allocate one IP address to the remote device.
- Select the **STATIC** checkbox, you need to enter the IP address, subnet mast, default gateway, and incremental value. The system will allocate the IP address to the remote devices by progressively increasing the last part of the IP address when initializing devices in batches.

When configuring IP address for multiple remote devices which were not in the same network segment, these remote devices will belong to the same network segment after configuration.

Step 8 Click Next.

The initializing is started.

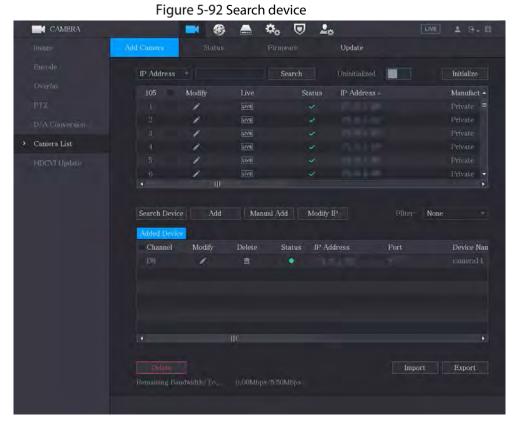

1	IP Address	Serial No.	Results	
1		000000000000000000000000000000000000000	Initialize:Succeed Modify IP:Succeed	

<u>Step 9</u> Click **Finished** to complete the settings.

5.6.1.2 Adding Remote Devices Automatically

https://tm.by Интернет-магазин

<u>Step 2</u> Select the checkbox of the device.

Step 3 Click Add.

The device is added into the **Added Device** area. \square

- You can also double-click the device to add it into the Added Device area.
- You can add devices in batches.

5.6.1.3 Adding Remote Devices Manually

Step 1 On the Add Camera page, click Manual Add.

<u>Step 2</u> Configure the settings for the manual adding device parameters.

Figure 5-94 Manual add parameters

Parameter	Description
Channel	In the Channel list, select the channel that you want use on the Device to
Channel	connect the remote device.
Manufacturer	In the Manufacturer list, select the manufacturer of the remote device.
	In the IP Address box, enter the IP address of remote device.
IP Address	
	The default is 192.168.0.0 which the system cannot connect to.
RTSP Port	The default value setting is 554. You can enter the value according to your
NISP POIL	actual situation.
	The default value setting is 80. You can enter the value according to your
HTTP Port	actual situation.
	If you enter other value, for example, 70, and then you should enter 70 after
	the IP address when logging in the Device by browser.
TCP Port	The default value setting is 37777. You can enter the value according to your
	actual situation.

Parameter	Description
User Name	Enter the user name of the remote device.
Password	Enter the password of the user for the remote device.
Remote CH No.	Enter the remote channel number of the remote device that you want to add.
Decoder Strategy	In the Decoder Strategy list, select Default , Realtime , or Fluent .
Protocol Type	 If the remote device is added through private protocol, the default type is TCP. If the remote device is added through ONVIF protocol, the system supports Auto, TCP, UDP, or MULTICAST. If the remote device is added through other manufacturers, the system supports TCP and UDP.
Encryption	If the remote device is added through ONVIF protocol, enabling the Encryption checkbox will provide encryption protection to the data being transmitted.
Step 3 Click OK to sav	e the settings.
 Only one 	e device can be added manually at one time.

• Indicates successful connection and I indicates connection failed.

5.6.1.4 Modifying or Deleting Remote Devices

You can modify and delete the added devices.

• To modify the remote devices, do the following:

Step 1 Click or double-click a device.

Figure 5-95 Modify

Modify				
Channel	D8 -			
Manufacturer	Private 🔻			
IP Address				
TCP Port				
Username	admin			
Password	•••••	Connect		
Total Channels				
Remote CH No.	D1 -

			OK	Cancel

<u>Step 2</u> In the **Channel** list, select the channel that you want to modify settings for.

<u>Step 3</u> Click **OK** to save the settings.

- To delete one or more added devices, do the following:
 - ◇ Click to delete one device.
 - Select the checkbox of the devices that you want to delete, and then click **Delete**.

5.6.1.5 Modifying IP Address

You can modify a single IP address or multiple IP addresses of remote devices at one time.

You can only modify the IP address of initialized cameras.

- To modify a single IP address, do the following:
- <u>Step 1</u> In the Searched Device list area, click for the device that you want to modify IP.

Figure 5-96 Modify IP

Modify IP		
Selected Device Quantity: 1		
⊖ DHCP	Username admi	'n
Default Gateway		
1 SN IP Address		
OK Cancel		

<u>Step 2</u> Configure the settings for IP address, subnet mask, default gateway, user name, and password.

- <u>Step 3</u> Click **OK** to save the settings.
- To modify IP address in batches, do the following:
- <u>Step 1</u> In the Searched Device list area, select the devices that you want to modify IP address in batches.
- Step 2 Click

Figure	5-97	Modify	IP

Backup Encryption					
New Folder				OK Ba	ick

Figure 5-98 Browse

- <u>Step 3</u> Configure the save path.
- <u>Step 4</u> Click **OK** to save the settings.

A pop-up message indicating "Successfully exported" is displayed.

```
Step 5 Click OK.
```

When exporting IP address, the **Backup Encryption** checkbox is selected by default. The file information includes IP address, port, channel number, manufacturer, user name, and password.

- If you select the **Backup Encryption** checkbox, the file format is .backup.
- If you clear the **Backup Encryption** checkbox, the file format is .csv. In this case, there might be a risk of data leakage.

5.6.1.7 Importing IP Address

You can add remote devices by importing IP address information.

<u>Step 1</u> Insert the USB storage device to the USB port of the Device.

Step 2 Click Import.

Figure 5-99 Browse

Browse					
Device Name	sdb1(USB USB)		Refresh For	mat

				亩	
				亩	
New Folder				OK B	ack

- <u>Step 3</u> Select the file that you want to import.
- <u>Step 4</u> Click **OK** to start importing.

After importing is completed, a pop-up message indicating "The import succeeded" is displayed.

If the IP address that you want to import already exists in the Device, the system will pop up a message to ask you whether to overwrite the existing content.

- Click OK to replace the existing one.
- Click Cancel to add it as a separate device in the Added Device area.

 \wedge

- You can edit the exported .csv file and be cautious not to change the file format; otherwise the file cannot be imported as it will be judged as invalid.
- The language of .csv file must match the Device language.
- The import and export through customized protocol is not supported.

5.6.2 Managing Remote Devices

You can view the status of remote devices and upgrade.

5.6.2.1 Viewing Status

You can view the device information such as connection status, IP address, motion detection, video loss detection, camera name, and manufacturer.

Select Main Menu > CAMERA > Camera List > Status.

5.6.2.2 Viewing Firmware Information

You can view the device firmware information such as channel number, IP address, manufacturer, system version, video input, audio input, and alarm in.

Select Main Menu > CAMERA > Camera List > Firmware.

<u>Step 2</u> Upgrade the device.

- File Update
- 1) Insert a USB storage device containing the upgrade files into the USB port of the Device.
- 2) Select the devices that you want to upgrade.
- 3) Click File Update. The File Update page is displayed.
- 4) Select the upgrading files and click **Apply**.
- Online Update
- 1) Click **Detect** or select the checkbox the device that you want to upgrade and click **Manual Check**.

The system starts detecting if there is a new version on the online server.

- 2) Select the checkbox of all the devices that have new version.
- 3) Click **Online Update**.

- The system will pop up a message to indicate if the upgrading is successful.
- You can use the Type list to filter the devices so that you can find the devices quickly.

5.7 Configuring Record Settings

You can record video manually or automatically and configure the recording settings to main stream and sub stream respectively.

5.7.1 Enabling Record Control

 \wedge

- Manual recording operation requires the user have the permission to access **STORAGE** settings.
- Check to ensure the HDD installed in the Device has been formatted properly.

To enter the record control page, do the following:

<u>Step 1</u> Right-click on the live view screen, the shortcut menu is displayed. On the shortcut menu,

select Manual Control > Record Control.

Record Mode						
Main Stream	All					
Manual						
Off						
Sub Stream						
Manual						
Off						
On						
Off						
				Ar	oply Ba	ck

Figure 5-102 Record mode

<u>Step 2</u> Configure the settings for the record control parameters.

Table 5-24 Record control parameters

Parameter	Description
Channel	Displays all the analog channels and the connected digital channels. You can
Channel	select a single channel or select All.
	• Auto: Automatically record according to the record type and recording
Main Stream/Sub	time as configured in the recording schedule.
Stream	• Manual : Keep general recording for 24 hours for the selected channel.
	• Stop: Do not record.
Snapshot	Enable or disable the scheduled snapshot for the corresponding channels.

Step 3 Click Apply.

5.7.2 Configuring Recorded Video Storage Schedule

You need to configure the storage schedule for the recorded video so that the recorded video can be saved. For details, see "5.1.4.9 Configuring Recorded Video Storage Schedule."

5.8 Configuring Snapshot Settings

5.8.1 Configuring Snapshot Trigger

The snapshot is divided into scheduled snapshot, event triggered snapshot, and face detection triggered snapshot. When the both are enabled, the event triggered snapshot has the priority.

- If there is no alarm event, the system performs scheduled snapshot.
- If there is any alarm event, the system performs event triggered snapshot.

5.8.1.1 Configuring Scheduled Snapshot

- <u>Step 1</u> Right-click on the live view screen, the shortcut menu is displayed.
- <u>Step 2</u> On the shortcut menu, select **Manual Control > Record Control**.
- <u>Step 3</u> In the **Snapshot** area, enable the snapshot for the channels if needed.

Figure 5-103 Enable snapshot

Red	cord Mode														
	Main Charan	A 11

Off					
Snapshot					
On					
Off					
		 		Apply	Back

<u>Step 2</u> Configure the settings for the record control parameters.

Table 5-25 Record control parameters

Parameter	Description						
Channel	Displays all the analog channels and the connected digital channels. You can						
Channel	select a single channel or select All.						
	• Auto: Automatically record according to the record type and recording						
Main Stream/Sub	time as configured in the recording schedule.						
Stream	• Manual: Keep general recording for 24 hours for the selected channel.						
	• Stop: Do not record.						
Snapshot	Enable or disable the scheduled snapshot for the corresponding channels.						

5.9.2 Instant Playback

You can use the instant playback function to play back the previous five minutes to sixty minutes of the recorded video in any channel. For details about instant playback function, see "5.2.2.1 Instant Playback."

5.9.3 Video Playback

You can search for and play back the recorded video saved on the Device. Select Main Menu > Search.

Figure 5-109 Video search

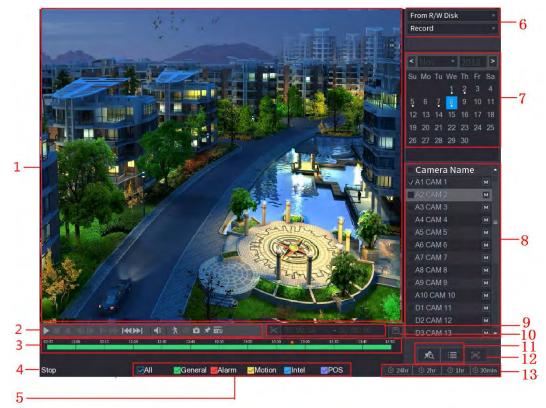

Figure 5-110 Video search description

No.	Function	Description						
		Display the searched recorded video or picture. Supports						
		simultaneously playing in single-channel, 4-channel, 9-channel, and						
	Display Window	16-channel.						
1								
		When playing back in a single channel, click and hold to select the area						
		that you want to enlarge. The area is enlarged after the left mouse						
		button is released. To exit the enlarged status, right-click on the image.						
2	Playback Controls	Playback control buttons. For details about the control buttons, see						
2	Bar	"5.9.3.1 Introducing Playback Controls."						

No.	Function	Description
3	Time Bar	 Display the type and time period of the current recorded video. In the 4-channel layout, there are four time bars are displayed; in the other view layouts, only one time bar is displayed. Click on the colored area to start playback from a certain time. In the situation when you are configuring the settings, rotate the wheel button on the time bar, the time bar is zooming in from 0. In the situation when playback is ongoing, rotate the wheel button on the time bar, the time bar is zooming from the time point where the playback is located. Time bar colors: Green indicates general type; Red indicates external alarm; Yellow indicates motion detection; Blue indicates intelligent events; Purple indicates POS events. For some models, when you are clicking on the blank area in the time bar, the system automatically jumps to the next time point where there is a recorded video located. Click and hold the time bar, and the mouse pointer shall change to a hand icon, and then you can drag to view the playback of the target time. You can drag the vertical orange line on the time bar to rapidly view the playback in iframe format. When playing back video in one channel mode, you can move mouse pointer to time bar to display thumbnail pictures for the video of target time. When playing back video, you can select other channels as needed. The time bar of newly added channels. The type and time period of newly added channels are the same with early base channels.
4	Play Status	Includes two playback status: Play and Stop .
5	Record type	Select the checkbox to define the recording type to search for.
6	Search type	Select the content to play back: Record , Picture , Subperiod . For details about the selecting search type, see "5.9.3.2 Selecting Search Type."
7	Calendar	Click the date that you want to search, the time bar displays the corresponding record. The dates with record or snapshot have a small solid circle under the date.

No.	Function	Description				
8	View Layout and Channel Selection	 In the Camera Name list, select the channel(s) that you want to play back. The window split is decided by how you select the channel(s). For example, if you select one channel, the playback is displayed in the single-channel view; if you select two to four channels, the playback is displayed in the four-channel view. The maximum is eight channels. Click in to switch the streams. Indicates main stream, and indicates sub stream. 				
9	Video Splice	Splice a section of recorded video and save it. For details about splicing a recorded video, see "5.9.3.3 Clipping Recorded Video."				
10	Backup	Back up the recorded video files. For details, see "5.9.3.4 Backing up Recorded Video."				
11	List Display	 This area includes Tag List and File List. Click the Tag List button, the marked recorded video list is displayed. Double-click the file to start playing. Click the File List button, the searched recorded video list is displayed. You can lock the files. For details, see "5.9.9 Using the File List." 				
12	Full Screen	Click to display in full screen. In the full screen mode, point to the bottom of the screen, the time bar is displayed. Right-click on the screen to exit full screen mode.				
13	Time Bar Unit	You can select 24hr, 2hr, 1hr, or 30min as the unit of time bar. The time bar display changes with the setting.				

5.9.3.1 Introducing Playback Controls Bar

You can perform the operations such as control the speed of playback, add mark, and take snapshots through the playback controls bar.

Figure 5-111 Playback control bar

The play backward function and playback speed are dependent on the product version. The actual product shall govern. You can also contact the technical support to consult the hardware version information.

1		Browse

5.9.3.3 Clipping Recorded Video

During playback, clip sections of recorded video and save to the USB storage device. Figure 5-114 Clip

<u>Step 1</u> Select a recorded video that you want to play.

- Click with to start playing from the beginning.
- Double-click anywhere in the time bar colored area to start playback.

<u>Step 2</u> Click on the time bar to select the start time, and then click K to start clipping.

Step 3 Click on the time bar to select the end time, and then click K to stop clipping.

Step 4 Click

- You can clip the video of a single-channel or multiple channels.
- Maximum 1024 files can be backed up at one time.
- The files that are selected in the File List cannot be clipped.

5.9.3.4 Backing up Recorded Video

You can back up the recorded video file or splice video file into the USB storage device.

- <u>Step 1</u> Select the recorded video file that you want to back up. You can select the following two types of files:
 - Recorded video file: Click III, the File List area is displayed. Select the file(s) that you want to back up.
 - Splice video file. For details about splicing video file, see "5.9.3.3 Clipping Recorded Video."

Step 2 Click

Figure 5-115 Backup

1			Nam	e(Type)	Free	Space/Total Sp	bace	Devi	ce Status	
	V :	sdb!	5(USE	BDISK)	15.6	60 GB/15.60 G	В	Read	iy

2	×		R	17-11-08 02	2:00:00	17-11-08 03	:00:00	1847632		

Step 3 Click Backup.

 \square

If you do not want to back the file, clear the checkbox.

5.9.4 Smart Search

During playback, you can analyze a certain area to find if there was any motion detection event occurred. The system will display the images with motion events of the recorded video.

Ш

Not all models support this function.

To use the Smart Search function, you need to enable the motion detection for the channel by selecting Main Menu > ALARM > Video Detection > Motion Detection.

To use the Smart Search function, do the following:

- <u>Step 1</u> Select Main Menu > SEARCH, the video search page is displayed.
- Step 2 In the Camera Name list, select the channel(s) that you want to play.
- Step 3 Click or double-click anywhere in the time bar colored area to start playback.

Step 4 Click

The grid is displayed on the screen.

 \square

- Only single-channel supports smart search. •
- If multi-channels are selected, double-click on the channel window to display this • channel only on the screen, and then you can start using smart search function.

<u>Step 5</u> Drag the pointer to select the searching area. \square

The grid area supports 22×18(PAL) and 22×15(NTSC).

Click to add filter criteria. You can check **Human** box, **Vehicle** box, or uncheck. Step 6

- Human: Display the motion alarm of human during selected time and searching area.
- Vehicle: Display the motion alarm of vehicle during selected time and searching area. •
- Unchecking: Display the general motion alarm which includes both human and vehicle, during selected time and searching area.

Click 🕅 Step 7

The screen starts playing back the motional splices of recorded video for the selected searching area.

Click to exit the smart searching while playback. Step 8

5.9.5 Showing AI Rule during Playback

To use the AI rule showing function, do the following:

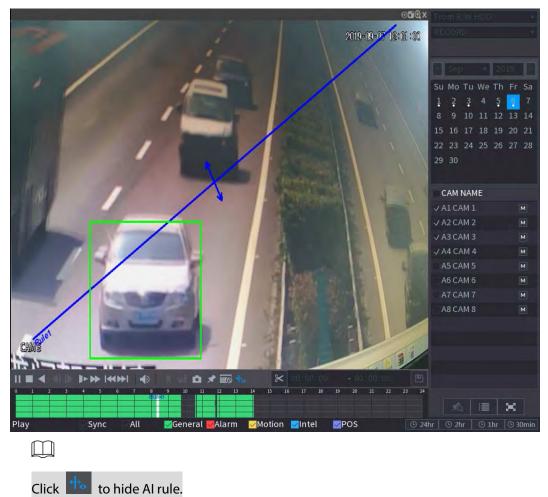

- <u>Step 1</u> Select Main Menu > SEARCH.
- In the **Camera Name** list, select the channel(s) that you want to play. Step 2
- or double-click anywhere in the time bar colored area to start playback. Click Step 3

You can see the AI rule during playback. This function is enabled by default.

Figure 5-116 Playback

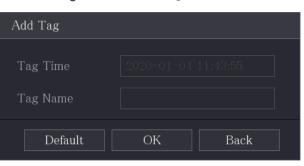

5.9.6 Marking and Playing Back Video

You can mark the recording for somewhere important. Then you can easily find the marked recording by searching time and mark name.

Marking a Video

- <u>Step 1</u> Select Main Menu > SEARCH.
- Step 2 In the playback mode, click

<u>Step 3</u> In the **Tag Name** box, enter a name.

Step 4 Click OK.

This marked video file displays in the Tag List.

Playing Back Marked Video

 \square

This function is supported on single-channel playback. <u>Step 1</u> In the **Camera Name** list, select one channel.

Step 2 Click

Figure 5-118 Mark list

00 : 00 : 00	Q
1	
Tag Time Name	
1 1:29:14 uuuu	
11:43:55 errt	
Tag Name	
Interval Before Tag	
0	sec.
×	¢

Step 3 Double-click the file that you want to play back. To search the marked video by time, in the SEARCH box on the top of the page, enter the

time, and then click

Playing Back Time before the Tag

You can configure to play N seconds of the tagged video before the tagged time.

- <u>Step 1</u> In the **Tag Name** box, enter the name of a tagged video.
- <u>Step 2</u> In the Interval Before Tag box, enter N seconds.
- Step 3 Click

The playback starts from N seconds before the tagged time.

 \square

If there is N seconds exist before the marked time, the playback starts from N seconds before the tagged time. If there is not, it plays back as much as there is.

Managing Tagged Video

On the **Tag List** page, click 🗖

Figure 5-119 Tag management

Tag Ma	inagement	t			
Chann		8			
Start 7	Гime	2020-01-04	00:00:00		
End T	ime	2020-01-05	00:00:00		Search
2	CH	Tag Time		Tag Name	
1		2020-01-04	11:29:14		
2		2020-01-04	11:43:55	errt	
De	elete				Cancel

- Be default, it manages all the tagged videos of the selected channel.
- To search the tagged video, select channel number from the **Channel** list, enter time in **Start Time** box and **End Time** box, and then click **Search**.
- All the tagged videos display in time order.
- To modify the name of tagged video, double-click a tagged video.
- To delete the marked video, select the tagged video, and then click **Delete**.

 \square

After opening the **Tag Management** page, the playback will pause until exiting this page. If the marked video that was in playing back is deleted, the playback will start from the first tagged video in the **Tag List**.

5.9.7 Playing Back Snapshots

You can search and play back the snapshots.

- <u>Step 1</u> Select Main Menu > SEARCH.
- <u>Step 2</u> In the Search Type list, select Picture.
- <u>Step 3</u> In the **Channel** list, select a channel number.

<u>Step 4</u> In the **Calendar** area, select a date.

Step 5 Click

The system starts playing snapshots according to the configured intervals.

5.9.8 Playing Back Splices

You can clip the recorded video files into splices and then play back at the same time to save your time.

Not all models support this function.

<u>Step 1</u> Select Main Menu > SEARCH.

<u>Step 2</u> In the Search Type list, select Subperiod; In the Split Mode list, select 4, 9, or 16.

Figure 5-120 Subperiod

- Step 3 In the Calendar area, select a date.
- <u>Step 4</u> In the Camera Name list, select a channel.

Only single-channel supports this function.

- <u>Step 5</u> Start playing back splices.
 - Click , the playback starts from the beginning.
 - Double-click anywhere on the time bar, the playback starts from where you click.

Figure 5-121 Time bar

Every recorded video file must be at least five minutes. If a recorded video file is less than 20 minutes but still choose to split into four windows, the system will automatically adjust the windows quantity to ensure every splice is more than five minutes, and in this case it is possible that there are no images are displaying in some windows.

5.9.9 Using the File List

You can view all the recorded videos within a certain period from any channel in the File List.

- <u>Step 1</u> Select Main Menu > VIDEO.
- <u>Step 2</u> Select a channel(s).

Step 3 Click

Figure 5-125 Local page

<u>Step 2</u> Configure the settings for the local alarms.

Parameter	Description			
Alarm-in Port Select the channel number.				
Alarm Name Enter the customized alarm name.				
Enable Enable or disable the local alarm function.				
Device Type	In the Device Type list, select NO or select NC as the voltage output			
Device Type	type.			
	Click Setting to display setting interface.			
Schedule	Define a period during which the motion detection is active. For details,			
Schedule	see "Setting Motion Detection Period" section in "5.10.4.1 Configuring			
	Motion Detection Settings."			
Anti Dithar	Configure the time period from end of event detection to the stop of			
Anti-Dither	alarm.			

Parameter	Description
Alarm-out Port	 Click Setting to display setting page. Local Alarm: Enable alarm activation through the alarm devices connected to the selected output port. Extension Alarm: Enable alarm activation through the connected alarm box. Wireless Siren: Enable alarm activation through devices connected by USB gateway or camera gateway.
Post-Alarm	Set a length of time for the Device to delay turning off alarm after the external alarm is cancelled. The value ranges from 0 seconds to 300 seconds, and the default value is 10 seconds.
Show Message	Select the Show Message checkbox to enable a pop-up message in your local host PC.
Report Alarm	Select the Report Alarm checkbox to enable the system to upload the alarm signal to the network (including alarm center) when an alarm event occurs.
Send Email	Select the Send Email checkbox to enable the system to send an email notification when an alarm event occurs. To use this function, make sure the email function is enabled in Main Menu > NETWORK > Email .
Record Channel	Select the channel(s) that you want to record. The selected channel(s) starts recording after an alarm event occurs.
PTZ Linkage	Click Setting to display the PTZ page. Enable PTZ linkage actions, such as selecting the preset that you want to be called when an alarm event occurs.
Post Record	Set a length of time for the Device to delay turning off recording after the alarm is cancelled. The value ranges from 10 seconds to 300 seconds, and the default value is 10 seconds.
Tour	Select the Tour checkbox to enable a tour of the selected channels.
Picture Storage	Select the Snapshot checkbox to take a snapshot of the selected channel. To use this function, select Main Menu > CAMERA > Encode > Snapshot , in the Type list, select Event .
Sub Screen	 Select the checkbox to enable the function. When an alarm event occurs, the extra screen outputs the settings configured in Main Menu > DISPLAY > Tour Setting > Sub Screen. Not all models support this function. To use this function, extra screen shall be enabled.

Parameter Description				
	Select the checkbox to enable the function. When an alarm event occurs,			
	the video output port outputs the settings configured in Main Menu >			
Video Matrix	DISPLAY > Tour Setting.			
	Not all models support this function.			
Buzzer	Select the checkbox to activate a buzzer noise at the Device.			
Log	Select the checkbox to enable the Device to record a local alarm log.			
Discovering	After enabling this function, you can connect a switch to the alarm input			
Disarming	port for disarming control.			

<u>Step 3</u> Click **Apply** to complete the settings.

- Click **Default** to restore the default setting.
- Click **Copy to**, in the **Copy to** dialog box, select the additional channel(s) that you want to copy the local alarm settings to, and then click **Apply**.

5.10.2.2 Configuring Alarms from Alarm Box

You can connect the alarm box to the RS-485 port of the Device. When the alarm is detected by the alarm box, the alarm information will be uploaded to the Device, and then the Device outputs the alarms in the way that you configure in this section.

<u>Step 1</u> Select Main Menu > ALARM > Alarm-in Port > Alarm Box.

Local	Alarm Box	CAM Ext	CAM Offline	HI	OCVI Alarm

				Apply	Back

Step 2 In the Channel list, select a channel or All.

- Step 3 Click
- <u>Step 4</u> Configure the settings for other parameters of the Alarm Box.
- <u>Step 5</u> Click **OK** to save the settings.
- <u>Step 6</u> Click **Apply** to complete the settings.

5.10.3 Alarm Output Settings

5.10.3.1 Configuring Alarm Output

When the Device activates alarms, the connected alarm device generates alarms in the way that you can configure in this section. You can connect to the output port of the Device or connect wirelessly.

- **Auto**: When an alarm event is triggered on the Device, the connected alarm device generates alarms.
- **Manual**: The alarm device is forced to keep generating alarms.
- **Stop**: The alarm output function is not enabled.

<u>Step 1</u> Select Main Menu > ALARM > Alarm-out Port > Alarm Mode.

<u>Step 3</u> Select the upgrade audio file (.bin).

<u>Step 4</u> Click **OK** to return to the Siren page.

<u>Step 5</u> Click **Upgrade** to upgrade the alarm audio file of the camera.

5.10.4 Video Detection

Video detection adopts computer vision and image processing technology. The technology analyzes the video images to detect the obvious changes such as moving objects and blurriness. The system activates alarms when such changes are detected.

5.10.4.1 Configuring Motion Detection Settings

When the moving object appears and moves fast enough to reach the preset sensitivity value, the system activates the alarm.

<u>Step 1</u> Select Main Menu > ALARM > Video Detection > Motion Detection.

Figure 5-134 Motion

Motion Detection	Video Loss	Video Tampering	Video Quality An			
	1			Setting		
	Setting		Anti-Dither	5 10		
☐ Show Message ✓ Record Channe ☐ PTZ Linkage			☐ Send Email Post-Record	10		
	Setting Buzzer None			e Set	ting	
Alarm Tone	None Siren					
Default	Copy to			Appl	ly	Back

<u>Step 2</u> Configure the settings for the motion detection parameters.

Parameter	Description		
Channel	In the Channel list, select a channel to set the motion detection.		
Region	Click Setting to define the motion detection region.		
Enable	Enable or disable the motion detection function.		
PIR Alarm	 Enable or disable the motion detection function. PIR function helps enhancing the accuracy and validity of motion detect. It can filter the meaningless alarms that are activated by the objects such as falling leaves, flies. The detection range by PIR is smaller than the field angle. PIR function is enabled by default if it is supported by the cameras. Enabling PIR function will get the motion detect to be enabled automatically to generate motion detection alarms; if the PIR function is not enabled, the motion detect just has the general effect. 		
	 Only when the channel type is CVI, the PIR function can be enabled. If the camera does not support PIR function, it will be unusable. 		
	• If the Device does not support PIR function, it will not be displayed on the page.		
Schedule	Define a period during which the motion detection is active.		
Anti-Dither	Configure the time period from end of event detection to the stop of alarm.		

Table 5-31 Motion detection parameters

Parameter	Description
Alarm-out Port	 Click Setting to display setting page. General Alarm: Enable alarm activation through the alarm devices connected to the selected output port. External Alarm: Enable alarm activation through the connected alarm box. Wireless Siren: Enable alarm activation through devices connected by USB gateway or camera gateway.
Post-Alarm	Set a length of time for the Device to delay turning off alarm after the external alarm is cancelled. The value ranges from 0 seconds to 300 seconds, and the default value is 10 seconds. If you enter 0, there will be no delay.
Show Message	Select the Show Message checkbox to enable a pop-up message in your local host PC.
Report Alarm	Select the Report Alarm checkbox to enable the system to upload the alarm signal to the network (including alarm center) when an alarm event occurs.
Send Email	Select the Send Email checkbox to enable the system to send an email notification when an alarm event occurs.
Record Channel	Select the channel(s) that you want to record. The selected channel(s) starts recording after an alarm event occurs.
PTZ Linkage	Click Setting to display the PTZ page. Enable PTZ linkage actions, such as selecting the preset that you want to be called when an alarm event occurs.
Post Record	Set a length of time for the Device to delay turning off recording after the alarm is cancelled. The value ranges from 10 seconds to 300 seconds, and the default value is 10 seconds.
Tour	Select the Tour checkbox to enable a tour of the selected channels.
Picture Storage	Select the Snapshot checkbox to take a snapshot of the selected channel.

Parameter	Description		
	Select the checkbox to enable the function. When an alarm event occurs,		
	the extra screen outputs the settings configured in Main Menu >		
	DISPLAY > Tour > Sub Screen.		
Sub Screen			
	• Not all models support this function.		
	• To use this function, extra screen shall be enabled.		
	Select the checkbox to enable the function. When an alarm event occurs,		
	the video output port outputs the settings configured in Main Menu >		
Video Matrix	DISPLAY > Tour.		
	Not all models support this function.		
Buzzer	Select the checkbox to activate a buzzer noise at the Device.		
Log	Select the checkbox to enable the Device to record a local alarm log.		
	Select to enable audio broadcast/alarm tones in response to a motion		
Alarm Tone	detection event.		
White Light	Select the checkbox to enable white light alarm of the camera.		
Siren	Select the checkbox to enable sound alarm of the camera.		

<u>Step 3</u> Click **Apply** to save the settings.

 \square

- Click **Default** to restore the default setting.
- Click **Copy to**, in the **Copy to** dialog box, select the additional channel(s) that you want to copy the motion detection settings to, and then click **Apply**.
- Click Test to test the settings.

Setting the Motion Detection Region

- <u>Step 1</u> Next to **Region**, click **Setting**.
- <u>Step 2</u> Point to the middle top of the page.

Figure 5-135 Detection setting

<u>Step 3</u> Configure the regions settings. You can configure totally four regions.

- 1) Select one region, for example, click 10.
- Drag on the screen to select the region that you want to detect. The selected area shows the color that represents the region.
- 3) Configure the parameters.

Table 5-32 Motion detection parameters

Parameter	Description		
Name	Enter a name for the region.		
Sensitivity	Every region of every channel has an individual sensitivity value.		
	The bigger the value is, the easier the alarms can be activated.		
Threshold	Adjust the threshold for motion detect. Every region of every channel has an		
Threshold	individual threshold.		
\square			

 \square

When anyone of the four regions activates motion detect alarm, the channel where this region belongs to will activate motion detect alarm.

- <u>Step 4</u> Right-click on the screen to exit the region setting page.
- <u>Step 5</u> On the **Motion Detection** page, click **Apply** to complete the settings.

Setting Motion Detection Period

The system only activates the alarm in the defined period.

<u>Step 1</u> Next to Schedule, click Setting.

Figure 5-136 Setting

<u>Step 2</u> Define the motion detection period. By default, it is active all the time.

- Define the period by drawing.
 - ◇ Define for a specified day of a week: On the timeline, click the half-hour blocks to select the active period.
 - ♦ Define for several days of a week: Click 🛄 before each day, the icon switches to

. On the timeline of any selected day, click the half-hour blocks to select the

active periods, all the days with sill take the same settings.

- ◇ Define for all days of a week: Click All, all ♀ switches to ♀. On the timeline of any day, click the half-hour blocks to select the active periods, all the days will take the same settings.
- Define the period by editing. Take Sunday as an example.
- 1) Click 🇱.

Figure	5-137	Period
iguic	5 157	i choa

Period						
	00 : 00	= 11 : 30				
	12 : 00	- 24 : 00				
	00:00	- 24 : 00				
Period 4	00:00	- 24 : 00				
	00 : 00	- 24 : 00				
Period 6	00 : 00	- 24 : 00				
	Mon	Tue	Wed.	🔲 Thu		
					OK	Back

- 2) Enter the time frame for the period, and then select the checkbox to enable the settings.
 ♦ There are six periods for you to set for each day.
 - ◇ Under Copy to, select All to apply the settings to all the days of a week, or select specific day(s) that you want to apply the settings to.
- 3) Click **OK** to save the settings.
- <u>Step 3</u> On the **Motion Detection** page, click **Apply** to complete the settings.

5.10.4.2 Configuring Video Loss Settings

When the video loss occurs, the system activates the alarm.

<u>Step 1</u> Select Main Menu > ALARM > Video Detection > Video Loss.

Figure 5-138 Video loss

Motion Detection Vide	o Loss Video Tampering	Video Quality An			
Channel					
Enable					
Schedule	Setting	CAM AntiDither	0

Tour	Setting	Picture Storag	ge Set	tting	
🗌 Buzzer	🗹 Log				
🗌 Alarm Tone	None 💌				
Default Copy	to		Арр	ly	Back

<u>Step 2</u> To configure the settings for the video loss detection parameters, see"5.10.4.1 Configuring Motion Detection Settings."

 \square

For PTZ activation, different from motion detection, the video loss detection can activate PTZ preset, tour, and pattern.

<u>Step 3</u> Click **Apply** to complete the settings.

 \square

- Click **Default** to restore the default setting.
- Click Copy to, in the Copy to dialog box, select the additional channel(s) that you want to copy the motion detection settings to, and then click Apply.

5.10.4.3 Configuring Tampering Settings

When the camera lens is covered, or the video is displayed in a single color because of the causes such as sunlight status, the monitoring cannot be continued normally. To avoid such situations, you can configure the tampering alarm settings.

<u>Step 1</u> Select Main Menu > ALARM > Video Detection > Video Tampering.

Figure 5-139 Video tampering

<u>Step 3</u> Select alarm linkage actions to disarm.

 \square

All alarm linkage actions will be disarmed when you select All.

Step 4 Click Apply.

5.11 Al Function

5.11.1 Configuring Al Mode

To use AI functions, you need to enable the corresponding AI mode.

```
<u>Step 1</u> Select Main Menu > AI > Parameters > AI Mode.
```

Figure 5-143 AI mode

Al Mode	Face	•	
	SMD		
	Face		
	IVS&SMD		

Step 2 Select an Al mode

- When **SMD** is selected, only SMD is available.
- When Face is selected, only face detection and face recognition are available.
- When IVS&SMD is selected, only IVS and SMD are available.

 \square

SMD, face detection, face recognition and IVS cannot be enabled simultaneously.

5.11.2 For Pro Al Series

 \square

The faces are fuzzily processed to comply with relevant regulations.

Al module provides face detection, face recognition, IVS functions, and video structuring. These functions take effect after they are configured and enabled. It adopts deep learning and can realize precision alarms.

- Face detection: The Device can analyze the faces captured by the camera and link the configured alarms.
- Face recognition: The Device can compare the captured faces with the face database and then link the configured alarms.
- IVS: The IVS function processes and analyzes the human and vehicle images to extract the key information to match with the preset rules. When the detected behaviors match with the rules, the system activates alarms. The IVS function can avoid wrong alarms by filtering the factors such as rains, light, and animals.
- Video structuring: The device can detect and extract key features from the human bodies and non-motor vehicles in the video, and then build a structured database. You can search any target you need with these features. For example, you can search any people who wears yellow short sleeve shirt. See more details in "5.11.1.4 Video Structuring."

5.11.2.1 Face Detection

The Device can analyze the pictures captured by the camera to detect whether the faces are on the pictures. You can search and filter the recorded videos the faces and play back.

If you select AI by device, then among face detection and recognition, IVS function, and video structuring, you can use one of them at the same time for the same channel.

5.11.2.1.1 Configuring Face Detection Parameters

The alarms are generated according to the configured parameters.

```
<u>Step 1</u> Main Menu > Al > Parameters > Face Detection.
```

5.11.2.2 Face Recognition

Face recognition applies to AI preview mode and smart search.

- Al preview mode: Supports comparing the detected faces with the face database, and display the comparison results.
- Smart search: Supports faces searching by faces attributes or portraits.

 \square

- If you select AI by device, then among face detection and recognition, IVS function, and video structuring, you can use one of them at the same time for the same channel.
- Before enabling face recognition function for a channel, the face detection must be enabled first for this channel.

5.11.2.2.1 Face Database Management

You should create a face database for comparing the detected faces and the faces in the database. The Device supports creating maximum 20 databases and registering 100,000 faces.

Creating a Face Database

<u>Step 1</u> Select Main Menu > AI > Database > Face Database Config.

Figure 5-149 Face database configuration

Туре		Local	•						
1		Name	Register No.	Failed No.	Error No.	Status	Modify	Details ^s	
		vip				Arming	ľ	Ê	
Mode	ling	Refresh				Ac	ld	Delete	

- <u>Step 2</u> At **Type**, you can select **Local** or **Remote**.
 - Local: Viewing the existing face databases or adding new one on the DVR.
 - **Remote**: If you have face recognition camera, you can select this to view the existing face databases or adding new one on the camera.
- Step 3 Click Add.

Figure 5-150	Add face database
riguic 5 150	

Add		
Name		
	OK	Back

<u>Step 4</u> Enter the face database name, and then click **OK**.

• Click 🚺 to modify database name.

- Click I to view the database details and add new faces to the database. For details, see " Adding Face Pictures."
- Select the database, and then click **Modeling**. The system will extract the attributes of face pictures in the database for the future comparison.
- Select the database, and then click **Delete** to delete the database.

Figure 5-151 Configure database

Туре		Local					
1		Name	Register No.	Failed No.	Error No.	Status Modify	Details S
		vip				Arming 🎤	Ē
Mode	ling	Refresh				Add	Delete

Adding Face Pictures

You can add face pictures to the existing databases one by one or by batch, or add from the detected faces.

To add face pictures one by one or by batch, you need to get the pictures from the USB storage device. The picture size should be smaller than 256K with resolution between 200×200–6000×5000.

Adding One Face Picture

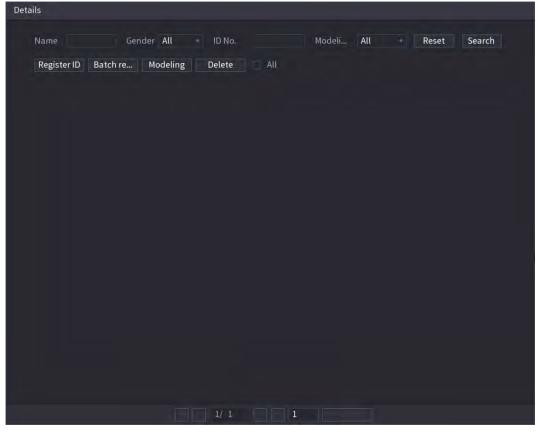

<u>Step 1</u> Select Main Menu > Al > Database > Face Database Config.

<u>Step 2</u> Click of the database that you want to configure.

Figure 5-152 Details

Step 3 Click Register ID.

		Name Gender Birthday Address ID Type ID No. Country	Male Year) Female
Step 4	Click to add a face pict	ture.	Rese	et Cancel

0	Enable	Name	Туре	Draw	Trigger	Delete	Р
4							Þ
						Ad	d
Defau	ılt					Apply	Back

<u>Step 2</u> In the **Channel** list, select the channel number that you want to configure the IVS function.

- <u>Step 3</u> At Type, you can select from AI by Camera and AI by Device.
 - Al by Camera: This option requires certain Al cameras. The camera will do all the Al analysis, and then give the results to the DVR.
 - Al by Device: The camera only transmits normal video stream to the DVR, and then the DVR will do all the AI analysis.
- Step 4 Click Add.

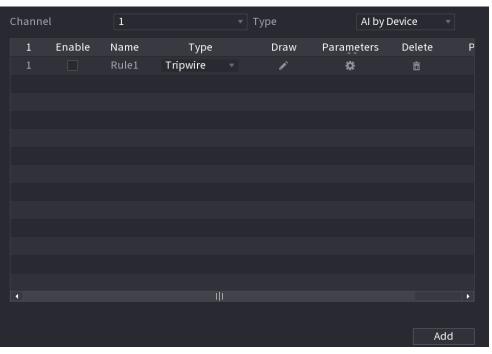

Figure	5-176	Added	rule

<u>Step 5</u> Configure the parameters for the rule that you selected.

<u>Step 6</u> Select the checkbox of the rule to enable it.

<u>Step 7</u> Click **Apply** to complete the settings.

Configuring Tripwire Rules

When the target object crosses the tripwire in the defined direction, the system activates alarms.

- The tripwire can be configured as a straight line or broken line.
- Supports detecting one-way or two-way tripwire crossing.
- Supports multiple tripwires in the same scenario to meet the complexity.
- Supports size filtering for target.

<u>Step 1</u> On the rule line that you added, in the **Type** list, select **Tripwire**.

Figure 5-177 Tripwire

	Schedule" and "5.9.1 Enabling Record Control."
	Click Setting to display the PTZ page.
	Enable PTZ linkage actions, such as selecting the preset that you want to
DT7 Links as	be called when an alarm event occurs.
PTZ Linkage	
	To use this function, the PTZ operations must be configured. For details,
	see "5.4 Controlling PTZ Cameras."
Post-Record	Set a length of time for the Device to delay turning off recording after
Post-Record	the alarm is cancelled. The value ranges from 10 seconds to 300 seconds.
	Select the Tour checkbox to enable a tour of the selected channels.
Tour	• To use this function, the tour setting must be configured.
	• After the tour is ended, the live view screen returns to the view layout
	before tour started.
	Select the Picture Storage checkbox to take a snapshot of the selected
	channel.
Picture Storage	
	To use this function, make sure the snapshot function is enabled for Intel
	in Main Menu > STORAGE > Schedule > Picture Storage.
	Select the checkbox to enable the function. When an alarm event occurs,
	the video output port outputs the settings configured in "Main Menu >
Video Matrix	DISPLAY > Tour > Sub Screen."
Theo matrix	
	 Not all models support this function.
	• The extra screen must be enabled to support this function.
Buzzer	Select the checkbox to activate a buzzer noise at the Device.
Log	Select the checkbox to enable the Device to record a local alarm log.
Alarm Tone	Select to enable audio broadcast in response to a face detection event.

<u>Step 5</u> Click **OK** to save the settings.

<u>Step 6</u> Select the **Enable** checkbox, and then click **Apply**.

The tripwire detecting function is active. When the target object crosses the tripwire in the defined direction, the system activates alarms.

ahua

Configuring Intrusion Rules

When the target enters and leaves the defined detection area, or the target appears in the defined area, the system activates alarms.

- You can define the shape and quantity of intrusion areas.
- Supports detecting the behaviors that enter and leave the intrusion areas.
- Supports detecting the behaviors that are moving in the intrusion areas. The quantity of areas and lasting time can be configured.
- Supports size filtering for target.

<u>Step 1</u> On the rule line that you added, in the **Type** list, select **Intrusion**.

Figure 5-182 Intrusion

- To lock the files to make it unable to be overwritten, select the files, and then click **Lock**.
- To add a mark to the file, select the files and then click Add Tag.

5.11.2.4 Video Structuring

The device can detect and extract key features from the human bodies and non-motor vehicles in the video, and then build a structured database. You can search any target you need with these features.

5.11.2.4.1 Configuring Video Structuring

<u>Step 1</u> Select Main Menu > AI > Parameters > Video Structuring.

Figure 5-189 Video structuring

Channel 1	AI by Device	▼
Human Detection	Face Detect	
📄 Non-motor Vehicle		

- <u>Step 2</u> In the **Channel** list, select a channel that you want to configure video structuring function, and then enable it.
- <u>Step 3</u> At Type, you can select from AI by Camera and AI by Device.
 - Al by Camera: This option requires certain Al cameras. The camera will do all the Al analysis, and then give the results to the DVR.
 - Al by Device: The camera only transmits normal video stream to the DVR, and then the DVR will do all the Al analysis.
- <u>Step 4</u> You can select from Human Detection, Face Detect, and Non-motor Vehicle.
 - Human Detection: Select this option, and then the device will analyze all the human body features in the video, including Top, Top Color, Bottom, Bottom Color, Hat, Bag, Gender, Age, and Umbrella. You can search the target you need with these features. See "Human Body Detection" in "5.11.1.4.2 Smart Search for Video Structuring."
 - Face Detect: You need to select Human Detection first, and then you can select this option. If you select this option, and there is any human face appears in the video, then there will be an extra face image and some extra face features in the human body detection results, including Glasses, Expression, Mask, and Beard. You can search the target you need with these features. See "Human Body Detection" in "5.11.1.4.2 Smart Search for Video Structuring."
 - Non-motor Vehicle: Select this option, and then the device will analyze all the nonmotor vehicle features in the video, including Type, Vehicle Color, People Number, and Helmet. You can search the target you need with these features. See " Non-motor Vehicle Detection" in "5.11.1.4.2 Smart Search for Video Structuring."

Step 5 Click Apply.

5.11.2.4.2 Smart Search for Video Structuring

You can search the target you need with human body features or non-motor vehicle features

Human Body Detection

<u>Step 1</u> Select Main Menu > AI > SMART SEARCH > Human Body Detection.

5.11.3 For Lite Al Series

Al module provides SMD (Smart Motion Detection) and IVS functions. These functions take effect after they are configured and enabled. It adopts deep learning and can realize precision alarms. You can only enable one of them to the same channel at the same time.

- SMD: The device can detect and classify humans and vehicles in the image.
- IVS: The IVS function processes and analyzes the human and vehicle images to extract the key information to match with the preset rules. When the detected behaviors match with the rules, the system activates alarms. The IVS function can avoid wrong alarms by filtering the factors such as rains, light, and animals.
- Face detection: The Device can analyze the faces captured by the camera and link the configured alarms. This function is available for XVR5X-I and XVR 7X-I series only.
- Face recognition: The Device can compare the captured faces with the face database and then link the configured alarms. This function is available for XVR 7X-I series only.

 \square

SMD, face detection, face recognition and IVS cannot be enabled simultaneously on select models. For details, see 5.1.4.2 Configuring General Settings.

5.11.3.1 SMD

The device can detect and classify humans and vehicles in the image.

5.11.3.1.1 Configuring SMD Parameters

<u>Step 1</u> Select Main Menu > Al > Parameters > SMD.

Figure 5-195 SMD

Channel Enable Sensitivity	1 Medium

	see "5.4 Controlling PTZ Cameras."
Post Posard	Set a length of time for the Device to delay turning off recording after
Post-Record	the alarm is cancelled. The value ranges from 10 seconds to 300 seconds.

Parameter	Description
	Select the Tour checkbox to enable a tour of the selected channels.
Tour	• To use this function, the tour setting must be configured.
	• After the tour is ended, the live view screen returns to the view layout
	before tour started.
	Select the Snapshot checkbox to take a snapshot of the selected
	channel.
Picture Storage	
	To use this function, make sure the snapshot function is enabled for Intel
	in Main Menu > STORAGE > Schedule > Snapshot.
	Select the checkbox to enable the function. When an alarm event occurs,
	the video output port outputs the settings configured in "Main Menu >
	DISPLAY > Tour > Sub Screen."
Video Matrix	
	• Not all models support this function.
	• The extra screen must be enabled to support this function.
Buzzer	Select the checkbox to activate a buzzer noise at the Device.
Log	Select the checkbox to enable the Device to record a local alarm log.
Alarm Tone	Select to enable audio broadcast in response to a face detection event.
on 5 Click OK to save t	

<u>Step 5</u> Click **OK** to save the settings.

<u>Step 6</u> Select the **Enable** checkbox, and then click **Apply**.

The tripwire detecting function is active. When the target object crosses the tripwire in the defined direction, the system activates alarms.

Configuring Intrusion Rules

When the target enters and leaves the defined detection area, or the target appears in the defined area, the system activates alarms.

- You can define the shape and quantity of intrusion areas.
- Supports detecting the behaviors that enter and leave the intrusion areas.
- Supports detecting the behaviors that are moving in the intrusion areas. The quantity of areas and lasting time can be configured.
- Supports size filtering for target.

<u>Step 1</u> On the rule line that you added, in the **Type** list, select **Intrusion**.

Figure 5-203 Intrusion

- <u>Step 2</u> In the **Channel** list, select a channel that you want to configure face detection function, and then enable it.
- <u>Step 3</u> Configure the parameters.

Table 5-40	Face	detection	parameters

Parameter	Description
	Click View Setting to draw areas to filter the target.
	You can configure two filtering targets (maximum size and minimum
Rule	size). When the target is smaller than the minimum size or larger than
	the maximum size, no alarms will be activated. The maximum size should
	be larger than the minimum size.
	Define a period during which the detection is active.
Schedule	For details, see "Setting Motion Detection Period" section in "5.10.4.1
	Configuring Motion Detection Settings."
	Click Setting to display setting page.
	• General Alarm: Enable general alarm and select the alarm output
	port.
Alarm-out Port	• Ext. Alarm: Connect the alarm box to the Device and then enable it.
Alami-outroit	Wireless Siren: Connect the wireless gateway to the Device and then
	enable it. For details, see "5.12 IoT Function."
	When an alarm event occurs, the system links the peripheral alarm devices
	connected to the selected output port.
	Set a length of time for the Device to delay turning off alarm after the
Post-Alarm	external alarm is cancelled. The value ranges from 0 seconds to 300
	seconds. If you enter 0, there will be no delay.
Show Message	Select the Show Message checkbox to enable a pop-up alarm message
Show Message	in your local host PC.

Parameter	Description
Report Alarm	 Select the Report Alarm checkbox to enable the system to upload the alarm signal to the network (including alarm center) when an alarm event occurs. Not all models support this function. The corresponding parameters in the alarm center should be configured. For details, see "5.15.1.12 Configuring Alarm Center
	Settings."
Send Email	 Select the Send Email checkbox to enable the system to send an email notification when an alarm event occurs. To use this function, make sure the email function is enabled in Main Menu > NETWORK > Email.
	Select the channel(s) that you want to record. The selected channel(s)
Record Channel	starts recording after an alarm event occurs.
	The recording for intelligence event and auto recording function must be enabled. For details, see "5.1.4.9 Configuring Recorded Video Storage Schedule" and "5.9.1 Enabling Record Control."
PTZ Linkage	 Click Setting to display the PTZ page. Enable PTZ linkage actions, such as selecting the preset that you want to be called when an alarm event occurs. To use this function, the PTZ operations must be configured. For details,
	see "5.4 Controlling PTZ Cameras."
Post Record	Set a length of time for the Device to delay turning off recording after the alarm is cancelled. The value ranges from 10 seconds to 300 seconds.
Tour	 Select the Tour checkbox to enable a tour of the selected channels. To use this function, the tour setting must be configured." After the tour is ended, the live view screen returns to the view layout before tour started.
Picture Storage	Select the Picture Storage checkbox to take a snapshot of the selected channel.
Video Matrix	 Select the checkbox to enable the function. When an alarm event occurs, the video output port outputs the settings configured in Main Menu > DISPLAY > TOUR > Extra Screen. Not all models support this function. The extra screen must be enabled to support this function.

5.11.3.4 Face Recognition (For XVR7X-I series only)

Face recognition applies to AI preview mode and smart search.

- Al preview mode: Supports comparing the detected faces with the face database, and display the comparison results.
- Smart search: Supports faces searching by faces attributes or portraits.

- If you select AI by device, then among face detection and recognition, IVS function, you can use one of them at the same time for the same channel.
- Before enabling face recognition function for a channel, the face detection must be enabled first for this channel.

5.11.3.4.1 Face Database Management

You should create a face database for comparing the detected faces and the faces in the database. The Device supports creating maximum 20 databases and registering 100,000 faces.

Creating a Face Database

<u>Step 1</u> Select Main Menu > AI > Database > Face Database Config.

Figure 5-214 Face database configuration

Г	Гуре		Local				
			Nomo	DesisterNe	Exter Ne	Ctatus Madif	. Deteiler
			Name			Status Modif	
			vip			Arming 🍃	È
	Mode	ling	Refresh			Add	Delete

- <u>Step 2</u> At **Type**, you can select **Local** or **Remote**.
 - Local: Viewing the existing face databases or adding new one on the DVR.
 - **Remote**: If you have face recognition camera, you can select this to view the existing face databases or adding new one on the camera.
- Step 3 Click Add.

5.12 IoT Function

5.12.1 Configuring Sensor Settings

You can connect external sensors wirelessly through the Device with USB gateway or through connecting to a camera gateway. After connection, you can activate alarm events through external sensors.

5.12.1.1 Connecting Sensor through Device

 \square

Only the Device with USB gateway supports this function. <u>Step 1</u> Select Main Menu > IoT > Management > Sensor Pairing.

<u>Step 4</u> Configure the settings for alarm linkage.

Table 5-41 Alarm linkage settings

Parameter	Description
Name	Enter the customized alarm name.

Parameter	Description
1	Click Setting to display setting page.
Cabadula	Define a period during which the motion detection is active. For details, see
Schedule	"Setting Motion Detection Period" section in "5.10.4.1 Configuring Motion
	Detection Settings."
	Click Setting to display the PTZ page.
PTZ Linkage	Enable PTZ linkage actions, such as selecting the preset that you want to be
	called when an alarm event occurs.
	Click Setting to display setting page.
	• Local Alarm: Enable alarm activation through the alarm devices
	connected to the selected output port.
Alarm-out Port	• Extension Alarm: Enable alarm activation through the connected alarm
	box.
	• Wireless Siren: Enable alarm activation through devices connected by
	USB gateway or camera gateway.
	Set a length of time for the Device to delay turning off alarm after the external
Post-Alarm	alarm is cancelled. The value ranges from 0 seconds to 300 seconds, and the
	default value is 10 seconds.
	Set a length of time for the Device to delay turning off recording after the
Post Record	alarm is cancelled. The value ranges from 10 seconds to 300 seconds, and the
	default value is 10 seconds.
Anti-Dither	Configure the time period from end of event detection to the stop of alarm.
	Select the channel(s) that you want to record. The selected channel(s) starts
	recording after an alarm event occurs.
Record Channel	The recording for alarm and auto recording must be enabled. For details, see
	"5.1.4.9 Configuring Recorded Video Storage Schedule" and "5.9.1 Enabling
	Record Control."
	Select the Snapshot checkbox to take a snapshot of the selected channel.
	\square .
Snapshot	To use this function, select Main Menu > CAMERA > Encode > Snapshot , in
	the Type list, select Event .
Tour	Select the Tour checkbox to enable a tour of the selected channels.
	Select to enable audio broadcast/voice prompts in response to a local alarm
Alarm Tone	event.

Parameter	Description
More Setting	 Show Message: Select the Show Message checkbox to enable a pop-up message in your local host PC. Buzzer: Select the checkbox to activate a buzzer noise at the Device. Video Matrix: Select the checkbox to enable the function. When an alarm event occurs, the video output port outputs the settings configured in "Main Menu > DISPLAY > Tour." Not all models support this function. Send Email: Enable the system to send an email notification when an alarm event occurs.
	 To use this function, make sure the email function is enabled in Main Menu > NETWORK > Email. Log: Select the checkbox to enable the Device to record a local alarm log.
	 Extra screen: Select the checkbox to enable the function. When an alarm event occurs, the extra screen outputs the settings configured in Main Menu > DISPLAY > Tour > Sub Screen.
ten 5 Click OK to	 Not all models support this function. To use this function, extra screen shall be enabled.

<u>Step 5</u> Click **OK** to save the settings.

<u>Step 6</u> On the **Wireless Detector** page, click **Apply** to complete the settings.

5.12.2 Configuring Temperature and Humidity Camera

You can view, search and export the temperature and humidity data of camera with such sensors and configure the alarm event settings.

To use this function, make sure there is at least one camera with temperature and humidity sensor has been connected to the Device.

5.12.2.1 Enabling Detecting Function

You should enable the IoT function the first time when you enter this page. <u>Step 1</u> On the main menu, select **IoT > Management > Temperature/Humidity**.

Figure 5-251 Temperature/Humidity

E	4		111			•
[Show	v °F(Fahrenhe	eit Degree)			

The Device starts detecting the temperature and humidity data from the camera and display on the **Realtime Display** page.

<u>Step 3</u> (Optional) Set temperature displaying mode. When **Show°F (Fahrenheit Degree)** is selected, the temperature will be displayed by Fahrenheit degree in **Realtime Display** tab.

5.12.2.2 Viewing Temperature and Humidity Data

You can view the temperature and humidity data on the **Realtime Display** page after the IoT function is enabled.

ahua

In the **Refresh Interval** box, select data refresh interval. For example, you can select **5 Sec**.

You can also display the temperature and humidity data in graphical way by selecting the **Display Chart** checkbox.

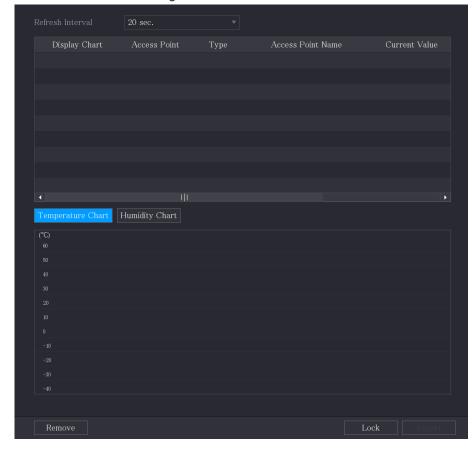

Figure 5-253 Chart

 \square

Click **Remove** to delete the data.

5.12.2.3 Exporting Temperature and Humidity Data

You can export the temperature and humidity data in .BMP format. This section uses exporting humidity data as an example.

<u>Step 1</u> Prepare a USB device and plug it into the Device.

<u>Step 2</u> On the **Realtime Display** page, click the **Humidity** tab.

Figure 5-254 Humidity

<u>Step 3</u> Configure the settings for alarm linkage.

Table 5-42 Alarm	linkage	settings
------------------	---------	----------

Parameter	Description
Access Point	Indicates the channel that the camera is connected to.
Туре	Temperature by default.
Detect Position Name	Set the detect position name.
	Select the channel that you want to preview to help monitor the channel
Preview Channel	of access point. This channel could be the channel of access point or any
	other channels according to your actual situation.

Parameter	Description
Event Type	Select event type as High or Low , and set the upper and low temperature
	limit respectively. For example, select event type as High and set upper
Upper Limit	limit as 28 , the alarm occurs when the temperature reaches 28 °C.
Enable	Enable the alarm function.
	Define a period during which the alarm setting is active. For more
Schedule	information about setting the period, see "5.10.4.1 Configuring Motion
	Detection Settings."
	Click Setting to display setting page.
	• General Alarm: Enable alarm activation through the alarm devices
	connected to the selected output port.
Alarm-out Port	• External Alarm: Enable alarm activation through the connected
	alarm box.
	• Wireless Siren: Enable alarm activation through devices connected
	by USB gateway or camera gateway.
	Click Setting to display the PTZ page.
PTZ Linkage	Enable PTZ linkage actions, such as selecting the preset that you want to
	be called when an alarm event occurs.
	Set a length of time for the Device to delay turning off alarm after the
Post-Alarm	external alarm is cancelled. The value ranges from 0 seconds to 300
	seconds, and the default value is 10 seconds. If you enter 0, there will be
	no delay.
	Set a length of time for the Device to delay turning off recording after the
Post Record	alarm is cancelled. The value ranges from 10 seconds to 300 seconds, and
	the default value is 10 seconds.
Anti-Dither	Configure the time period from end of event detection to the stop of
	alarm.
	Select the checkbox to take a snapshot of the selected channel.
Snapshot	
	To use this function, make sure the snapshot is enabled motion detect
	alarms in Main Menu > STORAGE > Schedule > Snapshot.
	Select the channel(s) that you want to record. The selected channel(s)
	starts recording after an alarm occurs.
Record Channel	
	The recording for IoT alarms and auto recording function must be
	enabled. For details, see "5.1.4.9 Configuring Recorded Video Storage
	Schedule" and "5.9.1 Enabling Record Control."
	Select the checkbox to enable a tour of the selected channels.
Tour	
	To use this function, make sure the tour is enabled and configured in Main
	Menu > DISPLAY > Tour.
Alarm Tone	Select to enable audio broadcast/alarm tones in response to a
	temperature alarm event.

Parameter	Description
	 Show Message: Select the Show Message checkbox to enable a popup message in your local host PC. Buzzer: Select the checkbox to activate a buzzer noise at the Device. Video Matrix: Select the checkbox to enable the function. When an alarm event occurs, the video output port outputs the settings configured in "Main Menu > DISPLAY > Tour."
More Setting	 Not all models support this function. Send Email: Enable the system to send an email notification when an alarm event occurs.
	To use this function, make sure the email function is enabled in Main Menu > NETWORK > Email.
	• Log: Select the checkbox to enable the Device to record a local alarm log.
	 Extra screen: Select the checkbox to enable the function. When an alarm event occurs, the extra screen outputs the settings configured in Main Menu > DISPLAY > Tour > Sub Screen.
ten 4. Click Save to	 Not all models support this function. To use this function, extra screen shall be enabled.

<u>Step 4</u> Click **Save** to save the settings.

5.12.2.4.2 Configuring Alarm Settings for Humidity Data

You can configure the alarm event by setting the humidity data.

<u>Step 1</u> On the home page, select **IoT > Management > Temperature/Humidity**.

<u>Step 2</u> Configure the settings for the POS parameters.

Parameter	Description		
	In the POS Name list, select the POS machine that you want to		
POS Name	configures settings for. Click to modify the POS name.		
	The POS name supports 21 Chinese characters or 63 English characters.		
Enable	Enable the POS function.		
	Select the channel(s) that you want to record. The selected channel(s)		
	starts recording after an alarm occurs.		
Record Channel			
Necola Channel	The recording for POS alarms and auto recording function must be		
	enabled. For details, see "5.1.4.9 Configuring Recorded Video Storage		
	Schedule" and "5.9.1 Enabling Record Control."		
Privacy	Enter the privacy content.		
Protocol	Select POS by default. Different machine corresponds to different		
	protocol.		
	In the Connect Type list, select the connection protocol type. Click		
	, the IP Address page is displayed.		
Connection Mode			
	In the Source IP box, enter the IP address (the machine that is		
	connected to the Device) that sends messages.		
Character Encode	Select a character encoding mode.		

Table 5-46 POS parameters

Parameter	Description				
	In the Overlay Mode list, Select Page or ROLL .				
	• Page means to turn a page when there are 16 lines of overlay				
	information.				
Overlay Mode	• ROLL means to roll up the page when there are 16 lines of overlay				
	information. The first line disappears each time.				
	When local preview mode is 4-split, overlay information is substituted				
	when there are 8 lines.				
	When the network is not working correctly and cannot be recovered				
Network Timeout	after the entered timeout limit, the POS information will not display				
Network Inneout	normally. After the network is recovered, the latest POS information				
	will be displayed.				
	Enter the time that how long you want to keep the POS information				
Overlay Time	displaying. For example, enter 5, the POS information disappear from				
	the screen after 5 seconds.				
Font Size	In the Font Size list, select Small , Medium , or Large as the text size of				
	POS information				
Font Color	In the color bar, click to select the color for the text size of POS				
	information.				
POS Info	Enable the POS Info function, the POS information displays in the live				
	view screen.				
	It does not need to configure. The system goes to a new line 1s after no				
	data is received.				
	If you enter a line delimiter, the system goes to a new line when overlay				
Line Break	information identifies the line delimiter (hexadecimal).				
	For example, if line delimiter is F and overlay information is 123F6789,				
	the local preview and web overlay information is displayed as:				
	123				
	6789				

<u>Step 3</u> Click **Apply** to complete the settings.

5.14 Configuring Backup Settings

5.14.1 Finding USB Device

When you inset a USB storage device into the USB port of the Device, the Device detects the USB storage device and pops up **Find USB device** page, which provides you a shortcut to perform backup and upgrading operations.

For details, see "5.14.2 Backing up Files", "5.21.2 Viewing Log Information", "5.20.4 Exporting and Importing System Settings", and "5.20.6 Updating the Device."

Figure 5-265 Backup device

Step 6 Click OK.

5.15 Network Management

5.15.1 Configuring Network Settings

You can ensure the network interworking between the Device and other devices through configuring the network settings.

5.15.1.1 Configuring TCP/IP Settings

You can configure the settings for the Device such as IP address, DNS according to the networking plan.

Select **Main Menu > NETWORK > TCP/IP**, the **TCP/IP** page is displayed.

For details about parameter settings, see "5.1.4.4 Configuring Network Settings."

Figure 5-268 TCP/IP

NIC Name	IP Address	Network Mode	NIC Member	Modify	Unbind	
NIC1		Single NIC		ľ		
IP Address:		Default Gat		MTU	: 1500	
MAC Address:		Subnet Mas		Mode		
	IPv4					
Preferred DNS						
Alternate DNS						
Default Card	NIC1					
						Apply

5.15.1.2 Configuring Port Settings

You can configure the maximum connection accessing the Device from Client such as WEB, Platform, and Mobile Phone and configure each port settings.

<u>Step 1</u> Select Main Menu > NETWORK > Port.

Figure 5-269 Port

	G NETWORK		🍪 🚔 🍫 🛡	2 0	LIVE 🛓 🗄 - 🛱
	TCP/IP	Max Connection	128	(0-128)	
>		TCP Port	37777		
		UDP Port	37778	(1025 - 65535)	
			80		
		HTTPS Port	443		
		RTSP Port	554		
	UPnP	NTP Server Port	123		
			38800		
					Apply Back

<u>Step 2</u> Configure the settings for the connection parameters.

 \square

The parameter setting can take effect without need to reboot the device.

Table 5-48 Connection parameters	Table 5-48 Con	nection parameters
----------------------------------	----------------	--------------------

Parameter	Description
	The allowable maximum clients accessing the Device at the same time,
Max Connection	such as WEB, Platform, and Mobile Phone.
	Select a value between 1 and 128. The default value setting is 128.
TCP Port	The default value setting is 37777. You can enter the value according to
	your actual situation.
	The default value setting is 37778. You can enter the value according to
UDP Port	your actual situation.
	The default value setting is 80. You can enter the value according to your
	actual situation.
HTTP Port	If you enter other value, for example, 70, and then you should enter 70
	after the IP address when logging in the Device by browser.
RTSP Port	The default value setting is 554. You can enter the value according to your
RISP POIL	actual situation.
DOC Dant	Data transmission. The value range is from 1 through 65535. The default
POS Port	value is 38800.
	The default value setting is 123. You can enter the value according to your
NTP Server Port	actual situation.

Parameter	Description
HTTPS Port	HTTPS communication port. The default value setting is 443. You can enter
ппрэгоп	the value according to your actual situation.

Step 3 Click Apply to complete the settings.

5.15.1.3 Configuring Wi-Fi Connection Settings

You can make wireless connection between the Device and the other devices in the same network through Wi-Fi settings, facilitating the devices connection and mobility. \square

Only the Device with Wi-Fi module supports this function.

<u>Step 1</u> Select Main Menu > NETWORK > Wi-Fi.

Figure 5-270 Wi-Fi

TCP/IP Port VM-1FI 0 SSID Signal Intensity 0 SSID Signal Intensity 0 SSID Signal Intensity 0 SSID Signal Intensity 0 SSID Signal Intensity 0 SSID Signal Intensity 0 SSID Signal Intensity 0 SSID Signal Intensity 0 SSID Signal Intensity 0 SSID Signal Intensity 0 SSID Signal Intensity Signal Intensity Signal Intensity 0 SSID Signal Intensity Signal Intensity	9 Lo	LIVE 🛓 🗄 - 1

UPnP fimal SNM ^{1°} Multicast Marm Center Registre	IP Address	
	Subnet Mask	
	Default Gateway	

<u>Step 2</u> Configure the settings for the Wi-Fi connection parameters.

Table 5-49 Wi-Fi connection parameters

Parameter	Description				
Connect	Enable Connect Automatically.				
	After the Device is restarted, it will automatically connect to the nearest				
Automatically	hotspot that had been connected successfully.				
	Refresh the hotspot list. The self-adaption function such as adding				
Refresh	password is supported if such setting was once configured.				
	In the hotpots list, select a hotspot, and then click Connect .				
Connact	• To reconnect the same hotspot, disconnect first and then reconnect.				
Connect	• To connect to other hotspot, disconnect from the current connected				
	hotspot first, and then connect to the other hotspot.				
Disconnect	To disconnect from a hotspot, click Disconnect .				

<u>Step 3</u> Click **Apply** to complete the settings.

After the Device is connected to a Wi-Fi hotspot, in the **Wi-Fi Info** area, the current hotspot, IP address, subnet mask, and default gateway are displayed.

5.15.1.4 Configuring 3G/4G Settings

You can connect a wireless 3G/4G module to the USB port of the Device and then access the Device with the IP address provided by the module.

 \square

Not all models support this function.

<u>Step 1</u> Connect the wireless 3G/4G module to the USB port of the Device.

<u>Step 2</u> Select Main Menu > NETWORK > 3G/4G.

Figure 5-271 3G/4G

TCP/II*	No Signal		Area 1
			nisa i
	NIC Name	- Enable	
	Network Type		
	APN		Area 2
DDNS	Authentication Type		
UPnP	Dial-up No.		
Einall			
	Password		
	Network Status	1000	
		IP Address	Area 3
	SIM Status	Subnet Mask	
	PPP Status	Default Gateway	
P2P			

The 3G/4G page consists of three areas:

- Area 1: Displays the signal strength.
- Area 2: Displays the module configurations.
- Area 3: Displays the connection state.
- \square

The information of Area 2 will display after the 3G/4G module is connected; while the information of Area 1 and Area 3 will display only after the 3G/4G function is enabled.

<u>Step 3</u> The Device starts identifying the wireless module and displays the recognized information for the parameters in Area 2.

Parameter	Description
NIC Name	Displays the name of Ethernet card.
Network Type	Displays the network type. Different type represents different supplier.
APN	Displays the default APN number.
Dial-up No.	Displays the default dial No.
Authentication	Authentication mode You can called DAD CHAD as NO AUTH
Туре	Authentication mode. You can select PAP , CHAP , or NO_AUTH .
Username,	Enter the username and password for authentication.
Password	Enter the username and password for authentication.

<u>Step 4</u> Select the **Enable** checkbox.

<u>Step 5</u> Click **Dial** to start connecting.

After the connection is established, the result is displayed in the Wireless Network area.

Figure 5-272 Wireless network

G NETWORK		-	¢.	◙	20		LIVE	2 0

Register	PPP Status				Default Gateway				
P2P									
						Aj	oply	Bac	k

<u>Step 6</u> Click **Apply** to complete the settings.

5.15.1.5 Configuring PPPoE Settings

PPPoE is another way for the Device to access the network. You can establish network connection by configuring PPPoE settings to give the Device a dynamic IP address in the WAN. To use this function, firstly you need to obtain the user name and password from the Internet Service Provider. <u>Step 1</u> Select Main Menu > NETWORK > PPPoE.

Figure 5-273 PPPoE

	rce70	Enable				
		Username				
		IP Address				
	PPPOE					
	DDNS					
						Apply Back
						Apply Back

<u>Step 2</u> Enable the PPPoE function.

<u>Step 3</u> In the **Username** box and **Password** box, enter the user name and password accordingly provided by the Internet Service Provider.

<u>Step 4</u> Click **Apply** to complete the settings.

The system pops up a message to indicate the successfully saved. The IP address appears on the PPPoE page. You can use this IP address to access the Device.

 \square

When the PPPoE function is enabled, the IP address on the TCP/IP page cannot be modified.

5.15.1.6 Configuring DDNS Settings

When the IP address of the Device changes frequently, the DDNS function can dynamically refresh the correspondence between the domain on DNS and the IP address, ensuring you access the Device by using the domain.

Preparation

Confirm if the Device supports the DDNS Type and log in the website provided by the DDNS service provider to register the information such as domain from PC located in the WAN.

After you have registered and logged in the DDNS website successfully, you can view the information of all the connected devices under this user name.

Procedure

Dyndn	nabling DDNS fune is DDNS ers.dyndus.org	stion, third-party ser	ver may collect your

<u>Step 1</u> Select Main Menu > NETWORK > DDNS.

Figure 5-274 DDNS

<u>Step 2</u> Configure the settings for the DDNS parameters.

Parameter	Description
Enable	Enable the DDNS function.
LINDIE	After enabling DDNS function, the third-party might collect your Device
	information.
Туре	Type and address of DDNS service provider.
Server Address	Type: Dyndns DDNS; address: members.dyndns.org
	Type: NO-IP DDNS; address: dynupdate.no-ip.com
	Type: CN99 DDNS; address: members.3322.org
Domain Name	The domain name for registering on the website of DDNS service provider.
User Name	Enter the user name and password obtained from DDNS service provider.
Password	You need to register (including user name and password) on the website
Passworu	of DDNS service provider.
Interval	Enter the amount of time that you want to update the DDNS.

Table 5-51 DDNS parameters

<u>Step 3</u> Click **Apply** to complete the settings.

Enter the domain name in the browser on your PC, and then press Enter.

If the web page of the Device is displayed, the configuration is successful. If not, the configuration is failed.

5.15.1.7 Configuring EMAIL Settings

You can configure the email settings to enable the system to send the email as a notification when there is an alarm event occurs.

<u>Step 1</u> Select Main Menu > NETWORK > Email.

Figure 5-275 Email

G NETWORK	=	🚳 🚔 🎭 🖲	J 2.	LIVE 🕹 🕒 🛱

Multicast	Sender			
Alarm Conter		XVR ALERT		
Register				
P2P	Encryption Type	TLS		
		120		
		60		
				Apply Back

<u>Step 2</u> Configure the settings for the email parameters.

Table 5-52 Email pa	rameters
---------------------	----------

Parameter	Description		
Enable	Enable the email function.		
Endore	There might be risk of sending data to specified email address after it is		
	enabled.		
SMTP Server	Enter the address of SMTP server of sender's email account.		
Port	Enter the port value of SMTP server. The default value setting is 25. You		
POIL	can enter the value according to your actual situation.		
Username	Enter the user name and password of conder's small assount		
Password Enter the user name and password of sender's email account.			
Anonymous	If enable the anonymity function, you can login as anonymity.		

Parameter	Description
Deseiver	In the Receiver list, select the number of receiver that you want to receive
Receiver	the notification. The Device supports up to three mail receivers.
Email Address	Enter the email address of mail receiver(s).
Sender	Enter the sender's email address. It supports maximum three senders
Sender	separated by comma.
	Enter the email subject.
Subject	Supports Chinese, English and numerals. It supports maximum 64
	characters.
Attachment	Enable the attachment function. When there is an alarm event, the system
Attachiment	can attach snapshots as an attachment to the email.
	Select the encryption type: NONE, SSL, or TLS.
Encryption Type	
	For SMTP server, the default encryption type is TLS .
	This is the interval that the system sends an email for the same type of
	alarm event, which means, the system does not send an email upon any
Sending Interval (sec.)	alarm event.
Sending Interval (sec.)	This setting helps to avoid the large amount of emails caused by frequent
	alarm events.
	The value ranges from 0 to 3600. 0 means that there is no interval.
Health Mail	Enable the health test function. The system can send a test email to check
	the connection.
Sending Interval (Min.)	This is the interval that the system sends a health test email.
	The value ranges from 30 to 1440. 0 means that there is no interval.
	Click Test to test the email sending function. If the configuration is correct,
Test	the receiver's email account will receive the email.
וכזנ	
	Before testing, click Apply to save the settings.

<u>Step 3</u> Click **Apply** to complete the settings.

5.15.1.8 Configuring UPnP Settings

You can map the relationship between the LAN and the WAN to access the Device on the LAN through the IP address on the WAN.

Preparation

- Log in to the router to set the WAN port to enable the IP address to connect into the WAN.
- Enable the UPnP function at the router.
- Connect the Device with the LAN port on the router to connect into the LAN.
- Select **Main Menu > NETWORK > TCP/IP**, configure the IP address into the router IP address range, or enable the DHCP function to obtain an IP address automatically.

Procedure

			ire 5-276						
G NETWORK			🎯 🚔	Ø _o		20		LIVE	
FCP70	Port M								
	LAN IP								
	WAN I								
	Port M	lapping List							
		Service Name	Pr	otocol	Internal F	Port External	Modify

Email		TCP					1		
					37778	37778	1		
			UB		554		1		
							1		
		SNMP	UD				1		
		HTTPS					1		

<u>Step 1</u> Select Main Menu > NETWORK > UPnP.

<u>Step 2</u> Configure the settings for the UPnP parameters.

Parameter	Description			
Port Mapping	Enable the UPnP function.			
1 ort Mapping	After it is enabled, the intranet services and ports shall be mapped to			
	extranet, proceed with caution.			
	Indicates the status of UPnP function.			
Status	Offline: Failed.			
	Online: Succeeded.			
LAN IP	Enter IP address of router on the LAN.			
	After mapping succeeded, the system obtains IP address automatically			
	without performing any configurations.			
WAN IP	Enter IP address of router on the WAN.			
***	After mapping succeeded, the system obtains IP address automatically			
	without performing any configurations.			

Parameter	Description
Port Mapping List	 The settings in PAT table correspond to the UPnP PAT table on the router. Service Name: Name of network server. Protocol: Type of protocol. Int. Port: Internal port that is mapped on the Device. Ext. Port: External port that is mapped on the router. To avoid the conflict, when setting the external port, try to use the ports from 1024 through 5000 and avoid popular ports from 1 through 255 and system ports from 256 through 1023. When there are several devices in the LAN, reasonably arrange the ports mapping to avoid mapping to the same external port. When establishing a mapping relationship, ensure the mapping ports are not occupied or limited. The internal and external ports of TCP and UDP must be the same and cannot be modified. Click to modify the external port.

<u>Step 3</u> Click **Apply** to complete the settings.

In the browser, enter http://WAN IP: External IP port. You can visit the LAN Device.

5.15.1.9 Configuring SNMP Settings

 \square

Not all models support this function.

You can connect the Device with some software such as MIB Builder and MG-SOFT MIB Browser to manage and control the Device from the software.

Preparation

- Install the software that can manage and control the SNMP, such as MIB Builder and MG-SOFT MIB Browser
- Obtain the MIB files that correspond to the current version from the technical support.

Procedure

<u>Step 1</u> Select Main Menu > NETWORK > SNMP.

Figure 5-277 SNMP

	NETWORK	-	6	۵. ۵	20	LIVE	4 0-5
	FCP/IP	Enable					
		Version			V3 (Recommended)		
		SNMP Port	161				
		Read Community

			Public			Private	
>			MD5		Authentication Type	MD5	
Ó							
	Alarm Center		CBC-DES		Encryption Type	CBC-DES	
						Apply	Back

<u>Step 2</u> Configure the settings for the SNMP parameters.

Table 5-54 SNMP parameters

Parameter	Description						
Enable	Enable the SNMP function.						
	Select the checkbox of SNMP version(s) that you are using.						
Version							
	The default version is V3 . There is a risk of select V1 or V2.						
SNMP Port	Indicates the monitoring port on the agent program.						
Read Community	Indicates the read/write strings supported by the agent program.						
Write Community							
	Indicates the destination address for the agent program to send the Trap						
Trap Address	information.						
Tran Dart	Indicates the destination port for the agent program to send the Trap						
Trap Port	information.						
Dood Only Username	Enter the user name that is allowed to access the Device and has the						
Read-Only Username	"Read Only" permission.						
	Enter the user name that is allowed to access the Device and has the						
Read/Write Username	"Read and Write" permission.						
Authentication Type	Includes MD5 and SHA. The system recognizes automatically.						
Authentication							
Password	Enter the password for authentication type and encryption type. The						
Encryption Password	password should be no less than eight characters.						

Parameter	Description
	In the Encryption Type list, select an encryption type. The default
Encryption Type	setting is CBC-DES.

<u>Step 3</u> Compile the two MIB files by MIB Builder.

- <u>Step 4</u> Run MG-SOFT MIB Browser to load in the module from compilation.
- <u>Step 5</u> On the MG-SOFT MIB Browser, enter the Device IP that you want to manage, and then select the version number to query.
- <u>Step 6</u> On the MG-SOFT MIB Browser, unfold the tree-structured directory to obtain the configurations of the Device, such as the channels quantity and software version.

5.15.1.10 Configuring Multicast Settings

When you access the Device from the network to view the video, if the access is exceeded, the video will not display. You can use the multicast function to group the IP to solve the problem.

<u>Step 1</u> Select Main Menu > NETWORK > Multicast.

NETWORK		🍪 🚔 🎝 🛡	20	LIVE 🛓 🗄 - 🛱
fCP/li*	Emble			
Port	IP Address	239 . 255 . 42 . 42	(224.0.0.0 - 239.255.255.255)

> Multicast				
Alarm Center				
Register				
P2P				
				Apply Back

Figure 5-278 Multicast

<u>Step 2</u> Configure the settings for the multicast parameters.

Table 5-55	Multicast	parameters
	mancicase	parameters

Parameter	Description					
Enable	Enable the multicast function.					
IP Address	Enter the IP address that you want to use as the multicast IP.					
IP Address	The IP address ranges from 224.0.0.0 through 239.255.255.255.					
Port	Enter the port for the multicast. The port ranges from 1025 through 65000.					

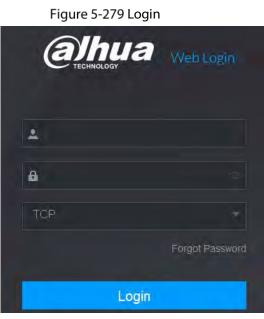

<u>Step 3</u> Click **Apply** to complete the settings.

You can use the multicast IP address to log in to the web.

On the web login dialog box, in the **Type** list, select **MULTICAST**. The web will automatically obtain the multicast IP address and join. Then you can view the video through multicast function.

5.15.1.11 Configuring Register Settings

You can register the Device into the specified proxy server which acts as the transit to make it easier for the client software to access the Device.

<u>Step 1</u> Select Main Menu > NETWORK > Register.

A NETWORK

Figure 5-280 Register i 😤 🛋 🖏 🗊 💄

5.15.2.2 Capturing Packet and Backing up

Packet capture means the operations such as capturing, resending, and editing data that are sent and received during network transmission. When there is network abnormality, you can perform packet capturing and back up into the USB storage device. This date can be provided to the technical support for analyzing the network condition.

<u>Step 1</u> Select Main Menu > MAINTAIN > Network > Test.

Figure 5-284 Test

Online User	Network Load	Test		
Network Test				
Destination IP				
Test Result				
Device Name	sdb1(USB USB)		▼ Refresh
Address				Browse
Name	I	P	Packet Sniffer Size	Packet Sniffer Backup
LAN1			0KB	\odot

- <u>Step 2</u> Connect a USB storage device to the Device.
- Step 3 Click Refresh.

The Device starts detecting the USB storage device and displays its name in the **Device Name** box.

- <u>Step 4</u> Select the route of the data that you want to capture and back up.
 - 1) In the **Packet Sniffer Backup** area, click **Browse**.

Figure 5-285 Browse

Bro	wse

	New Folder				OK Ba	ck

https://tm.by Интернет-магазин

2) Select the route.

 \square

- If several USB storage devices are connected to the Device, you can select from the Device Name list.
- Click Refresh to total space, free space and the file list in the selected USB storage device.
- In the case of insufficient capacity, click is to delete the needless files.
- Click New Folder to create a new folder in the USB storage device.
- 3) Click **OK** to save the route selection settings.

<u>Step 5</u> Click with to start packet capturing and backing up.

 \square

- Only the data packet of one LAN can be captured at one time.
- After capturing starts, you can exit the **Test** page to perform other operations such as web login and monitoring.

Step 6 Click

to stop capturing.

The backup data is saved in the selected route under the naming style "LAN name-time.pcap." You can open it by using Wireshark software.

5.16 Configuring Account Settings

You can add, modify and delete user accounts, groups, and ONVIF users, and set security questions for admin account.

 The user name supports 31 characters and group name supports 15 characters. The user name can be consisted of letter, number, "_", "@", ".".

- You can set maximum 64 users and 20 groups. The group name by "User" and "Admin" cannot be deleted. You can set other groups and define the relevant permissions. However, the admin account cannot be set randomly.
- You can manage the account by user and group and the name cannot be repeated. Every user must belong to a group, and one user only belongs to one group.

5.16.1 Configuring User Account

5.16.1.1 Adding a User Account

<u>Step 1</u> Select Main Menu > ACCOUNT > User.

		Fig	jure 5-287	User

Output Port	shares the same port with talkback function and the latter has the priority.
$\overline{\uparrow\uparrow}$	

 \square

• The finish time for audio playing is decided by audio file size and the configured interval.

• Playing priority: Alarm event > Talkback > Trial listening > Audio file.

<u>Step 3</u> Click **Apply** to complete the settings.

5.18 Storage Management

Storage management function manages the stored resources such as recorded video files and storage space. The function aims at providing easier operation and improving the storage efficiency.

5.18.1 Configuring Basic Settings

<u>Step 1</u> Select Main Menu > STORAGE > Basic.

Figure 5-306 Basic

	STORAGE	B	🚔 🏟 🛡	20	LIVE 1 G- S
×		Disk Full	Overwrite		
		Greate Video Files		60	
	Disk Manager		Time Length		
			Never		
					Apply Back

<u>Step 2</u> Configure the settings for the basic settings parameters.

Table 5-60 Basic settings parameters

Parameter	Description			
	Configure the settings for the situation all the read/write discs are full.			
Disk Full	• Select Stop to stop recording			
	• Select Overwrite to overwrite the recorded video files always from			
	the earliest time.			
Create Video Files	Configure the time length and file length for each recorded video.			
Delete Expired Files	Configure whether to delete the old files and if yes, configure the days.			

<u>Step 3</u> Click **Apply** to complete the settings.

5.18.2 Configuring the Recording and Snapshot Schedule

The system starts recording and taking snapshot according to the configured schedule. For details, see "5.1.4.9 Configuring Recorded Video Storage Schedule" and "5.1.4.10 Configuring Snapshot Storage Schedule."

5.18.3 Configuring Disk Manager

You can view the HDD information, format HDD, and configure the HDD type through HDD manager. <u>Step 1</u> Select Main Menu > STORAGE > Disk Manager.

In the table, you can view the information of current HDD, such as device name, HDD type, status, total space and free space, and serial number of the HDD port.

Figure 5-307 Disk manager

5.18.7 Configuring HDD Detecting Settings

Not all models support this function.

HDD detecting function detects the current status of HDD to let you know the HDD performance and replace the defective HDD.

5.18.7.1 Checking HDD

You can detect HDD by key area detect and global detect.

- Key area detect: Detect the files saved in HDD. The detected bad track can be repaired by formatting. If there are no files in HDD, the system cannot detect the bad track.
- Global detect: Detect the whole HDD through Windows, which takes time and might affect the HDD that is recording the video.

Step 1 Select Main Menu > STORAGE > Disk Check > Manual Check.

Figure 5-315 Manual check

	STORAGE	🖬 🍪 📥 🎭 🛡 🍰 🛛 🗤 💷 🗠 🖬

Note: The reco		e only. Please be caut	ious when evaluating record period.

5.18.9 Configuring FTP Storage Settings

You can store and view the recorded videos and snapshots on the FTP server.

Preparation

Purchase or download a FTP server and install it on your PC.

 \square

For the created FTP user, you need to set the write permission; otherwise the upload of recorded videos and snapshots might be failed.

Procedure

<u>Step 1</u> Select Main Menu > STORAGE > FTP.

Figure 5-325 FTP

	STORAGE	• 6	🚔 🌣 🛡	20	Ĺ	LIVE 🕹 🗄 - 🛱
		Enable				
					22	(1 - 65535)
		Username				
		Storage Path

Table 5-61	FTP	settinas	parameters
		settings	parameters

Dawawaataw	Description
Parameter	Description
Enable	Enable the FTP upload function.
ETD turne	• FTP: Plaintext transmission.
FTP type	• SFTP: Encrypted transmission (recommended)
Server Address	IP address of FTP server.
Port	• FTP: The default is 21.
	• SFTP: The default is 22.
Anonymous	Enter the user name and password to log in to the FTP server.
Username	Enable the anonymity function, and then you can login anonymously
Password	without entering the user name and password.
	Create folder on FTP server.
	• If you do not enter the name of remote directory, system
Chave ve Deth	automatically creates the folders according to the IP and time.
Storage Path	• If you enter the name of remote directory, the system creates the
	folder with the entered name under the FTP root directory first, and
	then automatically creates the folders according to the IP and time.

Parameter	Description
File Size	 Enter the length of the uploaded recorded video. If the entered length is less than the recorded video length, only a section of the recorded video can be uploaded. If the entered length is more than the recorded video length, the whole recorded video can be uploaded. If the entered length is 0, the whole recorded video will be uploaded.
Picture Upload Interval (Sec.)	 If this interval is longer than snapshot interval, the system takes the recent snapshot to upload. For example, the interval is 5 seconds, and snapshot interval is 2 seconds per snapshot, the system uploads the recent snapshot every 5 seconds. If this interval is shorter than snapshot interval, the system uploads the snapshot per the snapshot interval. For example, the interval is 5 seconds, and snapshot interval is 10 seconds per snapshot, the system uploads the snapshot every 10 seconds. To configure the snapshot interval, select Main Menu > CAMERA > Encode > Snapshot.
Channel	Select the channel that you want to apply the FTP settings.
Day	Select the week day and set the time period that you want to upload the
Period 1, Period 2	recorded files. You can set two periods for each week day.
Record type	Select the record type (Alarm, Intel, MD, and General) that you want to upload. The selected record type will be uploaded during the configured time period.

Step 3 Click Test.

The system pops up a message to indicate success or failure. If failed, check the network connection or configurations.

<u>Step 4</u> Click **Apply** to complete the settings.

5.19 Security Center

You can set security options to strengthen device security and use the device in a much safer way.

5.19.1 Security Status

Security scanning helps get a whole picture of device security status. You can scan user, service and security module status for detailed information about the security status of the device.

Detecting User and Service

 \square

Green icon represents a healthy status of the scanned item, and orange icon represents a risky status.

• Login authentication: When there's a risk in the login authentication, the icon will be in orange to warn risk. You can click **Details** to see the detailed risk description.

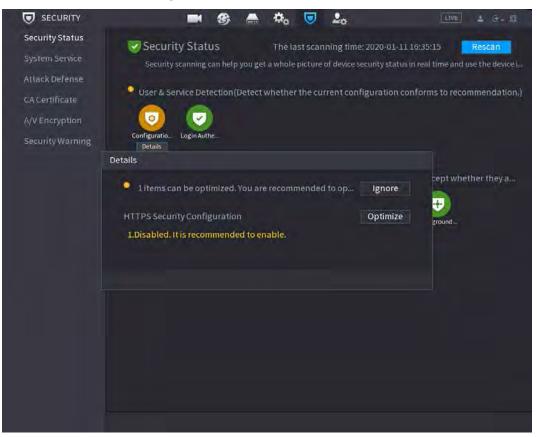

• Configuration Security: When there's a risk in the device configuration, the icon will be in orange

to warn risk. You can click **Details** to see the detailed risk description.

Figure 5-326 Security status

Scanning Security Modules

This area shows the running status of security modules. For details about the security modules, move mouse pointer on the icon to see the on-screen instructions.

Scanning Security Status

You can click **Rescan** to scan security status.

5.19.2 System Service

You can set DVR basic information such as basic services, 802.1x and HTTPS.

5.19.2.1 Basic Services

<u>Step 1</u> Select Main Menu > SECURITY > System Service > Basic Services.

Figure 5-327 Basic services

SECURITY		H 🛞 🛔	h 🔅 🛡	20	LIVE	4 6-8
	Basic Services					
	Mobile Push Notili	entions				
CA Certificate

<u>Step 2</u> Check whether there is any new version available.

- Auto check: Enable Auto-check for updates.
- Manual check: Click Manual Check.

The system starts checking the new versions. After checking is completed, the check result is displayed.

- If the "It is the latest version" text is displayed, you do not need to upgrade.
- If the text indicating there is a new version, go the step 3.
- Step 3 Click Upgrade now.

5.20.6.3 Uboot Upgrading

Ŵ

- Under the root directory in the USB storage device, there must be "u-boot.bin.img" file and "update.img" file saved, and the USB storage device must be in FAT32 format.
- Make sure the USB storage device is inserted; otherwise the upgrading cannot be performed.

When starting the Device, the system automatically checks whether there is a USB storage device connected and if there is any upgrade file, and if yes and the check result of the upgrade file is correct, the system will upgrade automatically. The Uboot upgrade can avoid the situation that you have to upgrade through +TFTP when the Device is halted.

5.20.7 Exporting Intelligent Diagnosis Data

When an error occurs, go to **Main Menu > MAINTAIN > Intelligent Diagnosis** to export intelligent diagnosis data for troubleshooting. The maintenance tasks, such as the import and export of configuration, can be performed in COS Pro Portal. For details, see the corresponding user's manual.

5.21 Viewing Information

You can view the information such as log information, HDD information, and version details

5.21.1 Viewing Version Details

You can view the version details such as device model, system version, and build date. Select Main Menu > INFO > VERSION.

Figure 5-350 Version

	INFO			LIVE	2	() - B	atta.
>	VERSION	Device Model	XVR8216A-4KL-I

5.21.2 Viewing Log Information

You can view and search the log information.

- If there is HDD installed, the logs about system operations are saved in the memory of the Device and other types of logs are saved into the HDD. If there is no HDD installed, the other types of logs are also saved in the memory of the Device.
- When formatting the HDD, the logs will not be lost. However, if you take out the HDD from the Device, the logs might be lost.

<u>Step 1</u> Select Main Menu > INFO > LOG.

Figure 5-351 Log

# 5.22 Logging out of the Device

On the top right of the Main Menu page or on any page after you have entered the Main Menu, click

### ➡ -

- Select Logout, you will log out the device.
- Select **Reboot**, the Device will be rebooted.
- Select **Shutdown**, the Device will be turned off.

# 6 Web Operations

### $\square$

- The pages in the Manual are used for introducing the operations and only for reference. The actual
  page might be different dependent on the model you purchased. If there is inconsistency
  between the Manual and the actual product, the actual product shall govern.
- The Manual is a general document for introducing the product, so there might be some functions described for the Device in the Manual not apply to the model you purchased.
- Besides Web, you can use our Smart PSS to log in to the device. For detailed information, refer to Smart PSS user's manual.

# 6.1 Connecting to Network

### 

- The factory default IP of the Device is 192.168.1.108.
- The Device supports monitoring on different browsers such as Safari, fire fox, Google on Apple PC to perform the functions such as multi-channel monitoring, PTZ control, and device parameters configurations.
- <u>Step 1</u> Check to make sure the Device has connected to the network.
- <u>Step 2</u> Configure the IP address, subnet mask and gateway for the PC and the Device. For details about network configuration of the Device, see "5.1.4.4 Configuring Network Settings."
- <u>Step 3</u> On your PC, check the network connection of the Device by using "ping ***.***.***". Usually the return value of TTL is 255.

# 6.2 Logging in to the Web

<u>Step 1</u> Open the IE browser, enter the IP address of the Device, and then press Enter. The Login in dialog box is displayed.

Figure 6-1 Log	in

Log	in

Ш

- The default administrator account is **admin**. The password is the one that was configured during initial settings. To security your account, it is recommended to keep the password properly and change it regularly.
- Click local to display the password.

Step 3 Click Login.

# 6.3 Introducing Web Main Menu

After you have logged in the web, the main menu is displayed.

Figure 6-2 Main menu

Table 6-1 Main menu description

No.	lcon	Description	
1		Includes configuration menu through which you can configure camera settings, network settings, storage settings, system settings, account settings, and view information.	
2	None	Displays system date and time.	
3	•	When you point to A the current user account is displayed.	
4		Click , select Logout, Reboot, or Shutdown according to your actual situation.	

No.	lcon	Description		
5		<ul> <li>Displays Cell Phone Client and Device SN QR Code.</li> <li>Cell Phone Client: Use your mobile phone to scan the QR code to add the device into the Cell Phone Client, and then you can start accessing the Device from your cell phone.</li> <li>Device SN: Obtain the Device SN by scanning the QR code. Go to the P2P management platform and add the Device SN into the platform. Then you can access and manage the device in the WAN. For details, please refer to the P2P operation manual. You can also configure P2P function in the local configurations. See "5.1.4.5 Configuring P2P Settings."</li> </ul>		
6		Displays the web main menu.		
7	None	<ul> <li>Includes eight function tiles: LIVE, VIDEO, ALARM, IoT, AI, BACKUP, DISPLAY, and AUDIO. Click each tile to open the configuration page of the tile.</li> <li>LIVE: You can perform the operations such as viewing real-time video, configuring channel layout, setting PTZ controls, and using smart talk and instant record functions if needed.</li> <li>VIDEO: Search for and play back the recorded video saved on the Device.</li> <li>ALARM: Search for alarm information and configure alarm event actions.</li> <li>AI: Configure face detection, face recognition, and IVS functions.</li> <li>IoT: You can view, search and export the temperature and humidity data of camera and configure the alarm event settings.</li> <li>BACKUP: Search and back up the video files to the local PC or external storage device such as USB storage device.</li> <li>DISPLAY: Configure the display effect such as displaying content, image transparency, and resolution, and enable the zero-channel function.</li> <li>AUDIO: Manage audio files and configure the playing schedule. The audio file can be played in response to an alarm event if the voice prompts function is enabled.</li> </ul>		

## 6.4 Viewing Open-source Software Notice

Log in to the web, select **MAINTAIN** > **System Info** > **Legal Info**, and then click **View** to view opensource software notice.

# 7 FAQ

## 1. DVR cannot boot up properly.

There are following possibilities:

- Input power is not correct.
- Power connection is not correct.
- Power switch button is damaged.
- Program upgrade is wrong.
- HDD malfunction or something wrong with HDD jumper configuration.
- Seagate DB35.1, DB35.2, SV35 or Maxtor 17-g has compatibility problem. Upgrade to the latest version to solve this problem.
- Front panel error.
- Main board is damaged.

## 2. DVR frequently shuts down or stops running.

There are following possibilities:

- Input voltage is not stable or it is too low.
- HDD malfunction or something wrong with jumper configuration.
- Button power is not enough.
- Front video signal is not stable.
- Working environment is too harsh, too much dust.
- Hardware malfunction.

#### 3. Hard disk cannot be detected.

There are following possibilities:

- HDD is broken.
- HDD jumper is damaged.
- HDD cable connection is loose.
- Main board SATA port is broken.

#### 4. There is no video output whether it is one-channel, multiple-channel or all-channel output.

There are following possibilities:

- Program is not compatible. Upgrade to the latest version.
- Brightness is 0. Restore factory default setup.
- There is no video input signal or it is too weak.
- Check privacy mask setup or your screen saver.
- DVR hardware malfunctions.

#### 5. Real-time video color is distorted.

There are following possibilities:

- When using BNC output, NTSC and PAL setup is not correct. The real-time video becomes black and white.
- DVR and monitor resistance is not compatible.
- Video transmission is too long or degrading is too huge.
- DVR color or brightness setup is not correct.

## 6. Cannot search local records.

There are following possibilities:

- HDD jumper is damaged.
- HDD is broken.
- Upgraded program is not compatible.
- The recorded file has been overwritten.
- Record function has been disabled.

## 7. Video is distorted when searching local records.

There are following possibilities:

- Video quality setup is too low.
- Program read error, bit data is too small. There is mosaic in the full screen. Restart the DVR to solve this problem.
- HDD data jumper error.
- HDD malfunction.
- DVR hardware malfunctions.

## 8. No audio under monitor state.

There are following possibilities:

- It is not a power picker.
- It is not a power acoustics.
- Audio cable is damaged.
- DVR hardware malfunctions.

## 9. There is audio under monitor state but no audio under playback state.

There are following possibilities:

- Setup is not correct. Enable audio function.
- Corresponding channel has no video input. Playback is not continuous when the screen is blue.

## 10. System time is not correct.

There are following possibilities:

- Setup is not correct.
- Battery contact is not correct or voltage is too low.
- Crystal oscillator is broken.

## 11. Cannot control PTZ on DVR.

There are following possibilities:

- Front panel PTZ error.
- PTZ decoder setup, connection or installation is not correct.
- Cable connection is not correct.
- PTZ setup is not correct.
- PTZ decoder and DVR protocol is not compatible.
- PTZ decoder and DVR address is not compatible.
- When there are several decoders, add 120 Ohm between the PTZ decoder A/B cables furthest end to delete the reverberation or impedance matching. Otherwise the PTZ control is not stable.
- The distance is too far.

## 12. Motion detection function does not work.

There are following possibilities:

- Period setup is not correct.
- Motion detection zone setup is not correct.
- Sensitivity is too low.

• For some versions, there is hardware limit.

## 13. Cannot log in client-end or web.

There are following possibilities:

- For Windows 98 or Windows ME user, update your system to Windows 2000 sp4. Or you can install client-end software of lower version. Note right now, our DVR is not compatible with Windows VISTA control.
- ActiveX control has been disabled.
- No dx8.1 or higher. Upgrade display card driver.
- Network connection error.
- Network setup error.
- Password or user name is invalid.
- Client-end is not compatible with DVR program.

## 14. There is only mosaic no video when preview or playback video file remotely.

There are following possibilities:

- Network fluency is not good.
- Client-end resources are limit.
- There is multiple-cast group setup in DVR. This mode can result in mosaic. Usually we do not recommend this mode.
- There is privacy mask or channel protection setup.
- Current user has no right to monitor.
- DVR local video output quality is not good.

## 15. Network connection is not stable.

There are following possibilities:

- Network is not stable.
- IP address conflict.
- MAC address conflict.
- PC or DVR network card is not good.

## 16. Burn error /USB back error.

There are following possibilities:

- Burner and DVR are in the same data cable.
- System uses too much CPU resources. Stop record first and then begin backup.
- Data amount exceeds backup device capacity. It might result in burner error.
- Backup device is not compatible.
- Backup device is damaged.

## 17. Keyboard cannot control DVR

There are following possibilities:

- DVR serial port setup is not correct.
- Address is not correct.
- When there are several switchers, power supply is not enough.
- Transmission distance is too far.

## 18. Alarm signal cannot be disarmed.

There are following possibilities:

- Alarm setup is not correct.
- Alarm output has been open manually.

- Input device error or connection is not correct.
- Some program versions might have this problem. Upgrade your system.

## 19. Alarm function is null.

There are following possibilities:

- Alarm setup is not correct.
- Alarm cable connection is not correct.
- Alarm input signal is not correct.
- There are two loops connect to one alarm device.

#### 20. Remote control does not work.

There are following possibilities:

- Remote control address is not correct.
- Distance is too far or control angle is too small.
- Remote control battery power is low.
- Remote control is damaged or DVR front panel is damaged.

## 21. Record storage period is not enough.

There are following possibilities:

- Camera quality is too low. Lens is dirty. Camera is installed against the light. Camera aperture setup is not correct.
- HDD capacity is not enough.
- HDD is damaged.

## 22. Cannot playback the downloaded file.

There are following possibilities:

- There is no media player.
- No DXB8.1 or higher graphic acceleration software.
- There is no DivX503Bundle.exe control when you play the file transformed to AVI via media player.
- No DivX503Bundle.exe or ffdshow-2004 1012 .exe in Windows XP OS.

## 23. Forgot local menu operation password or network password

Contact your local service engineer or our sales person for help. We can guide you to solve this problem.

## 24. When I login via HTTPS, a dialogue says the certificate for this website is for other address.

Create server certificate again.

## 25. When I login via HTTPS, a dialogue says the certificate is not trusted.

Download root certificate again.

## 26. When I login via HTTPS, a dialogue says the certificate has expired or is not valid yet.

Make sure your PC time is the same as the device time.

## 27. I connect the general analog camera to the device, there is no video output.

There are following possibilities:

- Check camera power supplying, data cable connection and other items.
- This series device does not support the analog camera of all brands. Make sure the device supports general standard definition analog camera.

## 28. I connect the standard definition analog camera or the coaxial camera to the device, there is no video

## output.

There are following possibilities:

• Check camera power supplying, or camera data cable connection.

• For the product supports analog standard definition camera/HD camera, you need to go to the **Main Menu > CAMERA > CHANNEL TYPE** to select corresponding channel type and then restart the DVR.

## 29. I cannot connect to the IP channel.

There are following possibilities:

- Check the camera is online or not.
- Check IP channel setup is right or not (such as IP address, user name, password, connection protocol, and port number).
- The camera has set the allowlist (Only the specified devices can connect to the camera).
- 30. After I connected to the IP channel, the one-window output is OK, but there is no multiple-window output.

There are following possibilities:

- Check the sub stream of the camera has been enabled or not.
- Check the sub stream type of the camera is H.264 or not.
- Check the device supports camera sub stream resolution or not (such as 960H, D1, and HD1).

# 31. After I connected to the IP channel, the multiple-window output is OK, but there is no one-window output.

There are following possibilities:

- Check there is video from the IP channel or not. Go to the **Main Menu > INFO > BPS** to view bit stream real-time information.
- Check the main stream of the camera has been enabled or not.
- Check the main stream type of the camera is H.264 or not.
- Check the device supports camera main stream resolution or not (such as 960H, D1, and HD1).
- Check camera network transmission has reached the threshold or not. Check the online user of the camera.

## 32. After I connected to the IP channel, there is no video output in the one-window or the multiplewindow mode. But I can see there is bit stream.

There are following possibilities:

- Check the main stream/sub stream type of the camera is H.264 or not.
- Check the device supports camera main stream/sub stream resolution or not (such as 1080P, 720P, 960H, D1, and HD1).
- Check the camera setup. Make sure It supports the products of other manufacturers.

## 33. DDNS registration failed or cannot access the device domain name.

There are following possibilities:

- Check the device is connected to the WAN. Check the device has got the IP address if the PPPoE can dial. If there is a router, check the router to make sure the device IP is online.
- Check the corresponding protocol of the DDNS is enabled. Check the DDNS function is OK or not.
- Check DNS setup is right or not. Default Google DNS server is 8.8.8.8, 8.8.5.5. You can use different DNS provided by your ISP.

## 34. I cannot use the P2P function on my cell phone or the web.

There are following possibilities:

- Check the device P2P function is enabled or not. (Main menu->Setting->Network->P2P)
- Check the device is in the WAN or not.
- Check cell phone P2P login mode is right or not.

https://tm.by Интернет-магазин

- It is the specified device P2P login port or not when you are using P2P client.
- Check user name or password is right or not.
- Check P2P SN is right or not. You can use the cell phone to scan the QR code on the device P2P page (Main Menu > Network > P2P), or you can use the version information of the WEB to confirm. (For some previous series products, the device SN is the main board SN, it might result in error.)

## 35. I connect the standard definition camera to the device, there is no video output.

There are following possibilities:

- Check the DVR supports standard definition signal or not. Only some series product supports analog standard definition signal, coaxial signal input.
- Check channel type is right or not. For the product supports analog standard definition camera/HD camera, you need to go to the Main Menu > CAMERA > CHANNEL TYPE to select corresponding channel type (such as analog) and then restart the DVR. In this way, the DVR can recognize the analog standard definition.
- Check camera power supplying, or camera data cable connection.

## 36. I cannot connect to the IP camera.

There are following possibilities:

- Check DVR supports IP channel or not. Only some series products support A/D switch function, it can switch analog channel to the IP channel to connect to the IP camera. From Main Menu > CAMERA > CHANNEL TYPE, select the last channel to switch to the IP channel. Some series product products support IP channel extension, it supports N+N mode.
- Check the IPC and the DVR is connected or not. Go to the Main Menu > CAMERA > REGISTRATION to search to view the IP camera is online or not. Or you can go to the Main Menu > INFO > NETWORK > Network Test, you can input IP camera IP address and then click the Test button to check you can connect to the IP camera or not.
- Check IP channel setup is right or not (such as IP address, manufacturer, port, user name, password, and remote channel number).

## Daily Maintenance

- Use the brush to clean the board, socket connector and the chassis regularly.
- The device shall be soundly earthed in case there is audio/video disturbance. Keep the device away from the static voltage or induced voltage.
- Unplug the power cable before you remove the audio/video signal cable, RS-232 or RS-485 cable.
- Do not connect the TV to the local video output port (VOUT). It might result in video output circuit.
- Always shut down the device properly. Use the shutdown function in the menu, or you can press the power button in the front panel for at least three seconds to shut down the device. Otherwise it might result in HDD malfunction.
- Make sure the device is away from the direct sunlight or other heating sources. Keep the sound ventilation.
- Check and maintain the device regularly.

# Appendix 2 HDD Capacity Calculation

Calculate total capacity needed by each DVR according to video recording (video recording type and video file storage time).

<u>Step 1</u> According to Formula (1) to calculate storage capacity  $q_i$  that is the capacity of each channel needed for each hour, unit MB.

Formula (1):  $q_i = d_i \div 8 \times 3600 \div 1024$ 

In the formula:  $d_i$  means the bit rate, unit Kbit/s

<u>Step 2</u> After video time requirement is confirmed, according to Formula (2) to calculate the storage capacity  $m_i$ , which is storage of each channel needed unit MB.

Formula (2): 
$$m_i = q_i \times h_i \times D_i$$

In the formula:

- $h_i$  means the recording time for each day (hour)
- $D_i$  means number of days for which the video shall be kept
- <u>Step 3</u> According to Formula (3) to calculate total capacity (accumulation)  $q_T$  that is needed for all channels in the DVR during **scheduled video recording**.

Formula (3): 
$$q_T = \sum_{i=1}^{c} m_i$$

In the formula: c means total number of channels in one DVR

<u>Step 4</u> According to Formula (4) to calculate total capacity (accumulation)  $q_T$  that is needed for all channels in DVR during **alarm video recording (including motion detection)**.

Formula (4): 
$$q_T = \sum_{i=1}^{c} m_i \times a\%$$

In the formula: *a%* means alarm occurrence rate

You can refer to the following table for the file size in one hour per channel. (All the data listed below are for reference only.)

Bit Stream Size (max)	File Size	Bit Stream Size (max)	File Size
96 Kbps	42 MB	128 Kbps	56 MB
160 Kbps	70 MB	192 Kbps	84 MB
224 Kbps	98 MB	256 Kbps	112 MB

Appendix Table 2-1 HDD capacity calculation

User's Manual

Bit Stream Size (max)	File Size	Bit Stream Size (max)	File Size
320 Kbps	140 MB	384 Kbps	168 MB
448 Kbps	196 MB	512 Kbps	225 MB
640 Kbps	281 MB	768 Kbps	337 MB
896 Kbps	393 MB	1024 Kbps	450 MB
1280 Kbps	562 MB	1536 Kbps	675 MB
1792 Kbps	787 MB	2048 Kbps	900 MB

# Appendix 7 Earthing

## Appendix 7.1 What is the Surge

Surge is a short current or voltage change during a very short time. In the circuit, it lasts for microsecond. In a 220 V circuit, the 5KV or 10KV voltage change during a very short time (about microseconds) can be called a surge. The surge comes from two ways: external surge and internal surge.

- The external surge: The external surge mainly comes from the thunder lightning. Or it comes from the voltage change during the on/off operation in the electric power cable.
- The internal surge: The research finds 88% of the surge from the low voltage comes from the internal of the building such as the air conditioning, elevator, electric welding, air compressor, water pump, power button, duplicating machine and other device of inductive load.

The lightning surge is far above the load level the PC or the micro devices can support. In most cases, the surge can result in electric device chip damage, PC error code, accelerating the part aging, data loss and etc. Even when a small 20 horsepower inductive engine boots up or stops, the surge can reach 3000 V to 5000 V, which can adversely affect the electronic devices that use the same distribution box.

To protect the device, you need to evaluate its environment, the lightning affection degree objectively. Because surge has close relationship with the voltage amplitude, frequency, network structure, device voltage-resistance, protection level, ground and etc. The thunder proof work shall be a systematic project, emphasizing the all-round protection (including building, transmission cable, device, ground and etc.). There shall be comprehensive management and the measures shall be scientific, reliable, practical and economic. Considering the high voltage during the inductive thundering, the International Electrotechnical Commission (IEC) standard on the energy absorbing step by step theory and magnitude classification in the protection zone, you need to prepare multiple precaution levels.

You can use the lightning rod, lightning strap or the lightning net to reduce the damage to the building, personal injury or the property.

The lightning protection device can be divided into three types:

- Power lightning arrester: There are 220 V single-phrase lightning arrester and 380 V three-phrase lightning arrester (mainly in parallel connection, sometimes use series connection) You can parallel connect the power lightning arrester in the electric cable to reduce the short-time voltage change and release the surge current. From the BUS to the device, there are usually three levels so that system can reduce the voltage and release the current step by step to remove the thunderstorm energy and guarantee the device safety. You can select the replaceable module type, the terminal connection type and portable socket according to your requirement.
- Signal lightning arrester: This device is mainly used in the PC network, communication system. The connection type is serial connection. Once you connected the signal lightning arrestor with the signal port, it can cut the channel of the thunderstorm to the device, and on the other hand, it can discharge the current to the ground to guarantee the device proper work. The signal lightning arrester has many specifications, and widely used in many devices such as telephone, network, analog communication, digital communication, cable TV and satellite antenna. For all the input port, especially those from the outdoor, you need to install the signal lightning arrester.

• Antenna feed cable lightning arrester: It is suitable for antenna system of the transmitter or the device system to receive the wireless signal. It uses the serial connection too.

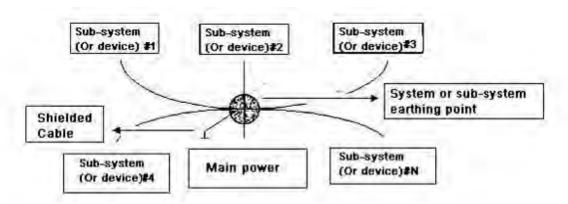

Note, when you select the lightning arrester, pay attention to the port type and the earthing reliability. In some important environment, you need to use special shielded cable. Do not parallel connect the thunder proof ground cable with the ground cable of the lightning rod. Make sure they are far enough and grounded respectively.

## Appendix 7.2 The Earthing Modes

We all know the earthing is the most complicated technology in the electromagnetism compatibility design since there is no systematic theory or module. The earthing has many modes, but the selection depends on the system structure and performance.

The following are some successfully experience from our past work.

• **One-point ground:** In the following figure you can see there is a one-point ground. This connection provides common point to allow signal to be transmitted in many circuits. If there is no common point, the error signal transmission occurred. In the one-point ground mode, each circuit is just grounded only and they are connected at the same point. Since there is only one common point, there is no circuit and so, there is no interference.

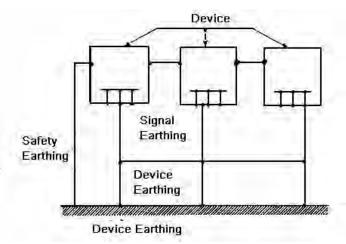

Appendix Figure 7-1 One-point ground

• Multiple-point ground: In the following figure, you can see the internal circuit uses the chassis as the common point. While at the same time, all devices chassis use the earthing as the common point. In this connection, the ground structure can provide the lower ground resistance because when there are multiple-point grounds; each ground cable is as short as possible. And the parallel cable connection can reduce the total conductance of the ground conductor. In the high-frequency circuit, you need to use the multiple-point ground mode and each cable needs to connect to the ground. The length shall be less than the 1/20 of the signal wavelength.

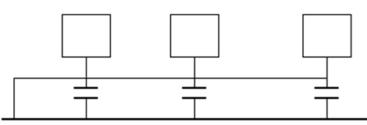

#### Appendix Figure 7-2 Multiple-point ground

• **Mixed ground:** The mix ground consists of the feature of the one-point ground and multiplepoint ground. For example, the power in the system needs to use the one-point ground mode while the radio frequency signal requires the multiple-point ground. So, you can use the following figure to earth. For the direct current (DC), the capacitance is open circuit and the circuit is onepoint ground. For the radio frequency signal, the capacitance is conducive and the circuit adopts multiple-point ground.

When connecting devices of huge size (the device physical dimension and connection cable is big comparing with the wave path of existed interference), then there is possibility of interference when the current goes through the chassis and cable. In this situation, the interference circuit path usually lies in the system ground circuit.

When considering the earthing, you need to think about two aspects: One is the system compatibility, and the other is the external interference coupling into the earth circuit, which results in system error. For the external interference is not regular, it is not easy to resolve.

# Appendix 7.3 Thunder Proof Ground Method in the Monitor

## System

- The monitor system shall have sound thunder proof earthing to guarantee personnel safety and device safety.
- The monitor system working ground resistance shall be less than 1 Ω.
- The thunder proof ground shall adopt the special ground cable from the monitor control room to the ground object. The ground cable adopts copper insulation cable or wire and its ground

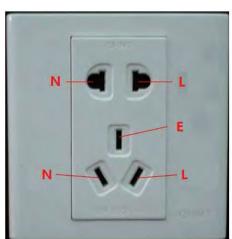

section shall be more than 20mm².

- The ground cable of the monitor system cannot short circuit or mixed connected with the strong alternative current cable.
- For all the ground cables from the control room to the monitor system or ground cable of other monitor devices, use the copper resistance soft cable and its section shall be more than 4 mm².
- The monitor system usually can adopt the one-point ground.
- Connect the ground end of 3-pin socket in the monitor system to the ground port of the system (protection ground cable)

# Appendix 7.4 The Shortcut Way to Check the Electric System by Digital Multimeter

For 220 VAC socket, from the top to the bottom, E (ground cable), N (neutral cable), L (live cable). Refer to the following figure.

Appendix Figure 7-4 Socket

There is a shortcut way to check whether these three cables connection are standard or not (not the accurate check).

## A

In the following operations, the multimeter range shall be at 750 V.

## For E (earth cable)

Turn the digital multimeter to 750 VAC, use your one hand to hold the metal end, and then the other hand inserts the pen to the E port of the socket. See the following figure. If the multimeter shows 0, then you can see current earth cable connection is standard. If the value is more than 10, then you can know there is inductive current and the earth cable connection is not proper.

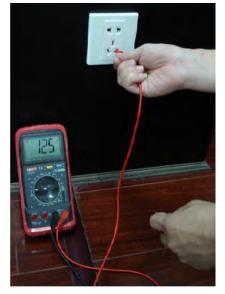

#### Appendix Figure 7-5 Check earth cable connection

## For L (live cable)

Turn the digital multimeter to 750 VAC, use your one hand to hold the metal end, and then the other hand inserts the pen to the L port of the socket. See the following figure. If the multimeter shows 125, then you can see current live cable connection is standard. If the value is less than 60, then you can know current live cable connection is not proper or it is not the live cable at all.

Appendix Figure 7-6 Check live cable connection

## For N (Neutral cable)

Turn the digital multimeter to 750 VAC, use your one hand to hold the metal end, and then the other hand inserts the pen to the N port of the socket. See the following figure. If the multimeter shows 0, then you can see current N cable connection is standard. If the value is more than 10, then you can see there is inductive current and the neutral cable connection is not proper. If the value is 120, then you can know that you have misconnected the neutral cable to the live cable.

#### User's Manual

## Appendix Figure 7-7 Check neutral cable connection

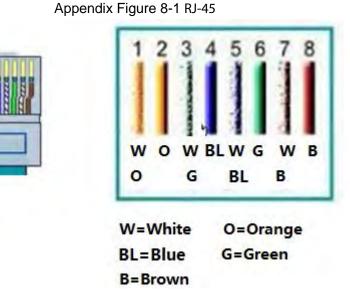

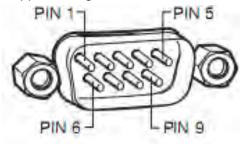

# Appendix 8 RJ45-RS232 Connection Cable Definition

Refer to the following figure for RJ-45 cable definition.

Refer to the following figure for RS-232 pin definition.

Appendix Figure 8-2 RS-232

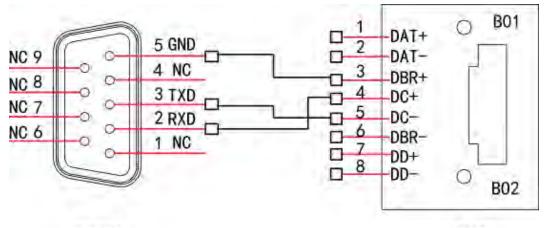

**Cross Connection** 

Refer to the following figure for connection information.

#### Appendix Figure 8-3 Cross connection

RS232

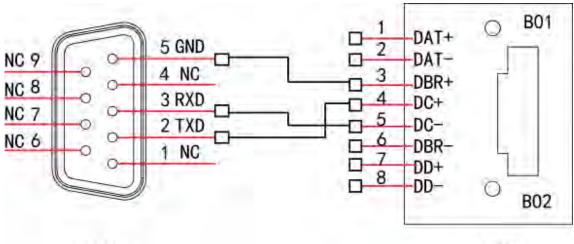

**RJ45** 

Refer to the following table for detailed crossover cable connection information.

Appendix Table 8-1 Crossover cable connection				
RJ45 (T568B)	RJ45 (Network cable)	RS-232	Signal Description	
4	Blue	2	RXD	
5	White and blue	3	TXD	
3	White and green	5	GND	

## **Straight Connection**

Refer to the following figure for straight cable connection information. Appendix Figure 8-4 Straight cable connection

RS232

RJ45

Refer to the following table for straight connection information.

Append	dix Table 8-2	Straight	connection

RJ45 (T568B)	RJ45 (Network cable)	RS-232	Signal Description
4	Blue	3	RXD
5	White and blue	2	TXD
3	White and green	5	GND

# Appendix 9 Cybersecurity Recommendations

Cybersecurity is more than just a buzzword: it's something that pertains to every device that is connected to the internet. IP video surveillance is not immune to cyber risks, but taking basic steps toward protecting and strengthening networks and networked appliances will make them less susceptible to attacks. Below are some tips and recommendations on how to create a more secured security system.

## Mandatory actions to be taken for basic device network security:

1. Use Strong Passwords

Please refer to the following suggestions to set passwords:

- The length should not be less than 8 characters;
- Include at least two types of characters; character types include upper and lower case letters, numbers and symbols;
- Do not contain the account name or the account name in reverse order;
- Do not use continuous characters, such as 123, abc, etc.;
- Do not use overlapped characters, such as 111, aaa, etc.;
- 2. Update Firmware and Client Software in Time
  - According to the standard procedure in Tech-industry, we recommend to keep your device (such as NVR, DVR, IP camera, etc.) firmware up-to-date to ensure the system is equipped with the latest security patches and fixes. When the device is connected to the public network, it is recommended to enable the "auto-check for updates" function to obtain timely information of firmware updates released by the manufacturer.
  - We suggest that you download and use the latest version of client software.

## "Nice to have" recommendations to improve your device network security:

1. Physical Protection

We suggest that you perform physical protection to device, especially storage devices. For example, place the device in a special computer room and cabinet, and implement well-done access control permission and key management to prevent unauthorized personnel from carrying out physical contacts such as damaging hardware, unauthorized connection of removable device (such as USB flash disk, serial port), etc.

2. Change Passwords Regularly

We suggest that you change passwords regularly to reduce the risk of being guessed or cracked.

3. Set and Update Passwords Reset Information Timely

The device supports password reset function. Please set up related information for password reset in time, including the end user's mailbox and password protection questions. If the information changes, please modify it in time. When setting password protection questions, we recommend you not to use those that can be easily guessed.

4. Enable Account Lock

The account lock feature is enabled by default, and we recommend you to keep it on to guarantee the account security. If an attacker attempts to log in with the wrong password several times, the corresponding account and the source IP address will be locked.

5. Change Default HTTP and Other Service Ports

We suggest you to change default HTTP and other service ports into any set of numbers between 1024~65535, reducing the risk of outsiders being able to guess which ports you are using.

## 6. Enable HTTPS

We suggest you to enable HTTPS, so that you visit Web service through a secure communication channel.

## 7. MAC Address Binding

We recommend you to bind the IP and MAC address of the gateway to the device, thus reducing the risk of ARP spoofing.

## 8. Assign Accounts and Privileges Reasonably

According to business and management requirements, reasonably add users and assign a minimum set of permissions to them.

## 9. Disable Unnecessary Services and Choose Secure Modes

If not needed, it is recommended to turn off some services such as SNMP, SMTP, UPnP, etc., to reduce risks.

If necessary, it is highly recommended that you use safe modes, including but not limited to the following services:

- SNMP: Choose SNMP v3, and set up strong encryption passwords and authentication passwords.
- SMTP: Choose TLS to access mailbox server.
- FTP: Choose SFTP, and set up strong passwords.
- AP hotspot: Choose WPA2-PSK encryption mode, and set up strong passwords.

## 10. Audio and Video Encrypted Transmission

If your audio and video data contents are very important or sensitive, we recommend that you use encrypted transmission function, to reduce the risk of audio and video data being stolen during transmission.

Reminder: encrypted transmission will cause some loss in transmission efficiency.

## 11. Secure Auditing

- Check online users: we suggest that you check online users regularly to see if the device is logged in without authorization.
- Check device log: By viewing the logs, you can know the IP addresses that were used to log in to your devices and their key operations.

## 12. Network Log

Due to the limited storage capacity of the device, the stored log is limited. If you need to save the log for a long time, it is recommended that you enable the network log function to ensure that the critical logs are synchronized to the network log server for tracing.

## 13. Construct a Safe Network Environment

In order to better ensure the safety of device and reduce potential cyber risks, we recommend:

- Disable the port mapping function of the router to avoid direct access to the intranet devices from external network.
- The network should be partitioned and isolated according to the actual network needs. If there are no communication requirements between two sub networks, we recommend you to use VLAN, network GAP and other technologies to partition the network, so as to achieve the network isolation effect.

- Establish the 802.1x access authentication system to reduce the risk of unauthorized access to private networks.
- Enable IP/MAC address filtering function to limit the range of hosts allowed to access the device.
